Preface *XIII*

List of Contributors *XV*

1	Synthesis of Homopolymers and Copolymers	1
	<i>Christian Slugovc</i>	
1.1	Introduction	1
1.2	Initiators	2
1.3	Monomers	5
1.4	Synthesis of Polymers with Complex Architectures	9
1.5	Stereochemistry and Sequence Control in ROMP	15
1.6	Conclusion	16
	References	16
2	ROMP in Dispersed Media	25
	<i>Valérie Héroguez, Abraham Chemtob and Damien Quemener</i>	
2.1	Introduction	25
2.2	Emulsion ROMP	25
2.2.1	Mini-emulsion ROMP	27
2.2.2	Micro-emulsion ROMP	28
2.2.3	Micellar ROMP	30
2.2.4	ROMP in Nonaqueous Emulsions	30
2.3	Dispersion ROMP	31
2.3.1	Biomedical Applications of PNBE–PEO Core–Shell Nanoparticles	32
2.4	Suspension ROMP	35
2.5	Formation of Nanoparticles	36
2.5.1	Photoactive ROMP Assemblies	39
2.5.2	Miscellaneous	41
2.6	Conclusion	42
	References	42

3	Telechelic Polymers	45
	<i>Nils Hanik and Andreas F.M. Kilbinger</i>	
3.1	Introduction	45
3.2	Mono-telechelic Polymers	47
3.2.1	Reaction with Substituted Vinyl Ethers	47
3.2.2	Vinyl Lactone Quenching	48
3.2.3	Terminal Cross Metathesis	48
3.2.3.1	Using Symmetrical Olefins	48
3.2.3.2	Using Asymmetrical Olefins	51
3.2.4	Reaction with Oxygen	51
3.2.5	Sacrificial Diblock Copolymer Synthesis	51
3.2.6	Catalyst Prefunctionalization	53
3.2.6.1	Functional Catalysts from Precursor Complexes	53
3.2.6.2	Functional Catalysts via Cross Metathesis	53
3.2.7	Aldehyde Quenching	54
3.3	Homo-telechelic Polymers	55
3.3.1	Degradation of Unsaturated Polymers and ADMET Polymerization	56
3.3.2	ROMP/Chain Transfer	58
3.3.3	Sacrificial Multiblock Copolymers	63
3.4	Hetero-telechelic Polymers	64
3.4.1	Prefunctionalization with Functional Alkylidene Initiators	64
3.4.2	Prefunctionalization with Sacrificial Synthesis	64
3.5	Conclusions and Outlook	66
	Acknowledgments	66
	References	67
4	Supramolecular Polymers	71
	<i>Elizabeth Elacqua, Niels ten Brummelhuis, and Marcus Weck</i>	
4.1	Introduction	71
4.2	Main-Chain Supramolecular Polymers	73
4.2.1	Macromonomers	73
4.2.2	ABC Triblock Copolymers	75
4.3	Side-Chain-Functionalized Supramolecular Polymers	77
4.3.1	Hydrogen-Bonding Recognition Motifs	77
4.3.2	Metal Coordination-Based Recognition Motifs	84
4.3.3	Mixed Orthogonal Recognition Motifs	86
4.4	Supramolecular Architectures by Design	88
4.5	Conclusion	89
	References	90
5	Synthesis of Materials with Nanostructured Periodicity	93
	<i>Garret M. Miyake, Raymond A. Weitekamp, and Robert H. Grubbs</i>	
5.1	Introduction	93
5.2	Sequential ROMP	94

5.3	Inorganic Composite Materials	96
5.4	ABA Triblock Copolymers	98
5.5	Nanostructures with Domain Sizes Exceeding 100 nm	101
5.6	Conclusions	111
	References	111
6	Synthesis of Nanoparticles	115
	<i>Anthony M. Rush, Carrie R. James, and Nathan C. Gianneschi</i>	
6.1	Introduction	115
6.2	Formation of Nanoparticles	116
6.3	Synthesis via Grafting-through Approach	117
6.4	Synthesis via Grafting-to Approach	134
6.4.1	Grafting-to Polymer Backbones via an Activated Ester	135
6.4.2	Grafting-to Polymer Backbones via Copper-Catalyzed Click Reaction	140
6.5	Synthesis via Grafting-from Approach	141
6.6	Summary	144
	References	145
7	Synthesis of Biodegradable Copolymers	149
	<i>Izabela Czelusniak and Ezat Khosravi</i>	
7.1	Introduction	149
7.2	Polyester-Functionalized Polymers	150
7.3	Peptide-Functionalized Polymers	152
7.4	Carbohydrate-Functionalized Polymers	154
7.5	Antimicrobial Polymers	156
7.6	Polymeric Betaines	157
7.7	ROMP Polymers as Drug Carriers	158
7.8	ROMP Polymers for Tissue Scaffolds	161
7.9	Conclusion	164
	References	164
8	Biologically Active Polymers	169
	<i>Laura L. Kiessling and Joshua M. Fishman</i>	
8.1	Introduction	169
8.2	Benefits of ROMP for Bioactive Polymer Synthesis	170
8.3	Biologically Active Polymeric Displays	170
8.3.1	Catalyst Design	171
8.3.2	Monomer Design for Bioactive Polymers	172
8.3.3	Troubleshooting in Polymerization of Bioactive Monomers	173
8.3.4	Routes to Functionalized Polymers	175
8.4	Exploiting the Bulk Properties of Polymers	177
8.4.1	Hydrogels	177
8.4.2	Coatings	178
8.4.2.1	Nonfouling Surfaces	178

8.4.2.2	Antimicrobial Peptides	179
8.4.2.3	Integrin-Binding Materials for Cell Adhesion and Spreading	181
8.4.2.4	Biolubricants	182
8.4.3	Drug Delivery	183
8.4.3.1	Self-Assembled Polymer Nanoparticles	183
8.4.3.2	Bottlebrush ROMP Polymers	184
8.4.4	Analytical Tools for Biodetection	185
8.4.4.1	On-Chip Assays	185
8.4.4.2	Imaging Agents	187
8.5	Probes of Biological Processes	188
8.5.1	Inhibitors	189
8.5.1.1	The Selectins and the Inflammatory Response	189
8.5.1.2	Integrins and Cellular Adhesion	190
8.5.1.3	GAG Surrogates	192
8.5.2	Effectors	192
8.5.2.1	Chemotaxis	193
8.5.2.2	Multivalent Antigens in B-Cell Signaling	193
8.5.3	Cell Penetration Polymers	195
8.5.3.1	Translocation Domains and Polyplexes	195
8.5.3.2	Targeted Delivery: B Cell Internalization	196
8.5.4	Assembling Multiprotein Complexes	197
8.5.4.1	Regulation of Immune Responses	198
8.6	Outlook	198
	References	199
9	Combination of Olefin Metathesis Polymerization with Click Chemistry	207
	<i>Steffen Kurzthals and Wolfgang H. Binder</i>	
9.1	Introduction	207
9.2	Attaching Functional Groups for Click Reaction	208
9.2.1	Alkyne(s)	209
9.2.2	Azide(s)	210
9.2.3	Thiol(s)	211
9.2.4	Acrylate(s)/Maleimide(s)	212
9.2.5	Anthracene(s)	212
9.2.6	Click Reaction before ROMP	212
9.3	Copper-Catalyzed Azide/Alkyne Click Reaction	213
9.3.1	Polymers with Hydrogen-Bonding Motifs	213
9.3.2	Biomedical Applications	215
9.3.3	Complex Polymeric Architectures via Azide/Alkyne Click Chemistry	216
9.3.4	Grafting-from and Catalyst Design	218
9.4	Diels–Alder Click Reaction	219

9.5	Thiol–Ene Reaction	220
9.6	Thiol-Michael Addition	222
9.7	Meldrum's Acid-Containing Polymers as Precursor for Ketene Coupling	223
9.8	Nitrile Oxide Cycloaddition	224
	Acknowledgment	225
	References	225
10	Self-Healing Polymers	229
	<i>Timothy C. Mauldin and Dylan J. Boday</i>	
10.1	Introduction	229
10.2	Monomer Storage	232
10.2.1	Encapsulation	232
10.2.2	Monomer-Filled Discreet and Connected Channels	234
10.3	Catalyst Stability and Protection	235
10.4	Catalyst and Monomer Choice	237
10.4.1	Pre-macroscopic Gelation: Monomer Delivery and Catalyst Dissolution	238
10.4.2	Pre-vitrification: Catalyst Diffusion and Polymerization	241
10.4.3	Post-vitrification: Healed Polymer	243
10.5	Intrinsic Self-Healing Polymers	246
10.5.1	Mechanochemical Activation of Alkylidene Ruthenium Complexes	246
10.5.2	Dynamic Cross-Metathesis in Unsaturated Polymers	247
10.6	Conclusions	248
	References	248
11	Functional Supports and Materials	253
	<i>Emily B. Anderson and Michael R. Buchmeiser</i>	
11.1	Introduction	253
11.2	Preparation of Functional Supports	254
11.2.1	Precipitation Polymerization Methods	254
11.2.2	Grafting Techniques	257
11.2.3	Coating Techniques	262
11.2.4	Nanoparticle Loading	264
11.3	Functional Monolithic Supports	267
11.3.1	Concepts	267
11.3.2	Synthesis of Monolithic Supports	267
11.3.3	Functionalization, Metal Removal, and Metal Content	268
11.3.4	Applications	270
11.3.4.1	Catalysis	270
11.3.4.2	Separation Science	274
11.3.4.3	Tissue Engineering	275
11.4	Twenty-First Century Functional Supports	276

11.5	Summary and Outlook	276
	Acknowledgment	276
	References	277
12	Latent Ruthenium Catalysts for Ring Opening Metathesis Polymerization (ROMP)	283
	<i>Eyal Tzur and Gabriel Lemcoff</i>	
12.1	Introduction	283
12.2	Thermal Activation	284
12.2.1	Cis-Dianion Type Catalysts	284
12.2.2	Catalysts Bearing Electron-Rich Carbene Ligands	285
12.2.3	Catalysts Bearing Chelating Ligands	286
12.3	Light-Induced Activation	293
12.4	Chemical Activation	302
12.5	Mechanical Activation	308
12.6	Conclusions	309
	References	310
13	ADMET Polymerization	313
	<i>Michael D. Schulz and Kenneth B. Wagener</i>	
13.1	Introduction	313
13.2	ADMET: The Metathesis Polycondensation Reaction	316
13.2.1	Implications of Step Growth	316
13.2.2	Cyclization versus Polymerization	316
13.2.3	Interchange Reactions	317
13.2.4	Monomer Purity	318
13.2.5	Catalyst Considerations	318
13.2.5.1	Isomerization	318
13.2.5.2	Catalyst Activity and Functional Group Tolerance	319
13.2.6	Solvent	320
13.2.7	Hydrogenation	320
13.3	ADMET of Nonconjugated Hydrocarbon Dienes	321
13.3.1	Terminal Dienes	321
13.3.2	Branched Terminal Dienes	322
13.3.3	1,1-Disubstitued Olefins	323
13.3.4	1,2-Disubstituted Olefins	323
13.3.5	Trisubstituted Olefins	323
13.4	ADMET Copolymerization	324
13.5	ADMET of Functionalized Dienes	325
13.5.1	Ethers, Acetals, and Alcohols	326
13.5.2	Amines	327
13.5.3	Thioethers	328
13.5.4	Carbonyl Compounds	328
13.5.5	Negative Neighboring Group Effect	330
13.5.6	Halides	330

13.5.7	Carboxylic and Phosphonic Acids	331
13.5.8	Silicon Compounds	331
13.5.9	Ionomers	334
13.5.10	Organometallic Compounds	334
13.6	Functional Materials	335
13.6.1	Biological Applications	335
13.6.2	Electroactive Polymers	336
13.6.3	Liquid-Crystalline Polymers	336
13.7	Modeling Polyethylene	337
13.7.1	Modeling Branching in Polyethylene	337
13.7.2	Modeling Copolymers of Ethylene and Vinyl Monomers	339
13.8	Conjugated Polymers	340
13.8.1	Polyacetylenes	340
13.8.2	Poly(phenylene vinylene)s	341
13.8.3	Poly(thienylene vinylene)	342
13.8.4	Other Conjugated Polymers	343
13.9	Solid-State Polymerization	343
13.10	ADMET Depolymerization	344
13.11	Telechelic Oligomers	344
13.12	Complex Polymer Architectures	345
13.12.1	Hyperbranched Polymers	345
13.12.2	Mechanically Interlocked Polymers	346
13.13	Biorenewable Polymers	346
13.14	Conclusions and Outlook	348
	References	348
14	Biorenewable Polymers	357
	<i>John H. Phillips</i>	
14.1	Introduction	357
14.2	ADMET	359
14.2.1	Plant Oils	359
14.2.2	Postmodification	361
14.2.3	Acyclic Triene Metathesis (ATMET)	362
14.2.4	Specialized Polymers	363
14.2.4.1	Polymers for Isomerization Studies	363
14.2.4.2	Phosphorus-Containing Polymers	364
14.2.4.3	Nylon	365
14.3	ROMP	365
14.3.1	Castor Oil	366
14.3.2	Dilulin	367
14.3.3	Norbornyl-Modified Fatty Acids	370
14.3.4	Terpenes	371
14.4	Conclusion	372
	References	372

15	Polymerization of Substituted Acetylenes	375
	<i>Toshio Masuda and Afang Zhang</i>	
15.1	Introduction	375
15.2	Polymerization Reactions	375
15.3	Catalysts	376
15.4	Recent Catalysts for Living Polymerization	379
15.4.1	Metal Halide-Based Catalysts	379
15.4.2	Single-Component Catalysts	380
15.5	Polymerization of Monosubstituted Acetylenes	381
15.6	Polymerization of Disubstituted Acetylenes	381
15.7	Polymer Modification Reactions	382
15.8	Properties of Polymers	386
	References	387
