

Table of Contents

When the Players Are Not Expectation Maximizers (Invited Talk)	1
<i>Amos Fiat and Christos Papadimitriou</i>	
How Do You Like Your Equilibrium Selection Problems? Hard, or Very Hard? (Invited Talk)	15
<i>Paul W. Goldberg</i>	
A Simplex-Like Algorithm for Fisher Markets	18
<i>Bharat Adsul, Ch. Sobhan Babu, Jugal Garg, Ruta Mehta, and Milind Sohoni</i>	
Nash Equilibria in Fisher Market	30
<i>Bharat Adsul, Ch. Sobhan Babu, Jugal Garg, Ruta Mehta, and Milind Sohoni</i>	
Partition Equilibrium Always Exists in Resource Selection Games	42
<i>Elliot Anshelevich, Bugra Caskurlu, and Ameya Hate</i>	
Mixing Time and Stationary Expected Social Welfare of Logit Dynamics	54
<i>Vincenzo Auletta, Diodato Ferraioli, Francesco Pasquale, and Giuseppe Persiano</i>	
Pareto Efficiency and Approximate Pareto Efficiency in Routing and Load Balancing Games	66
<i>Yonatan Aumann and Yair Dombb</i>	
On Nash-Equilibria of Approximation-Stable Games	78
<i>Pranjal Awasthi, Maria-Florina Balcan, Avrim Blum, Or Sheffet, and Santosh Vempala</i>	
Improved Lower Bounds on the Price of Stability of Undirected Network Design Games	90
<i>Vittorio Bilò, Ioannis Caragiannis, Angelo Fanelli, and Gianpiero Monaco</i>	
On the Rate of Convergence of Fictitious Play	102
<i>Felix Brandt, Felix Fischer, and Paul Harrenstein</i>	
On Learning Algorithms for Nash Equilibria	114
<i>Constantinos Daskalakis, Rafael Frongillo, Christos H. Papadimitriou, George Pierrakos, and Gregory Valiant</i>	

On the Structure of Weakly Acyclic Games	126
<i>Alex Fabrikant, Aaron D. Jaggar, and Michael Schapira</i>	
A Direct Reduction from k -Player to 2-Player Approximate Nash Equilibrium	138
<i>Uriel Feige and Inbal Talgam-Cohen</i>	
Responsive Lotteries	150
<i>Uriel Feige and Moshe Tennenholtz</i>	
On the Existence of Optimal Taxes for Network Congestion Games with Heterogeneous Users	162
<i>Dimitris Fotakis, George Karakostas, and Stavros G. Kolliopoulos</i>	
Computing Stable Outcomes in Hedonic Games	174
<i>Martin Gairing and Rahul Savani</i>	
A Perfect Price Discrimination Market Model with Production, and a (Rational) Convex Program for It	186
<i>Gagan Goel and Vijay Vazirani</i>	
The Computational Complexity of Trembling Hand Perfection and Other Equilibrium Refinements	198
<i>Kristoffer Arnsfelt Hansen, Peter Bro Miltersen, and Troels Bjerre Sørensen</i>	
Complexity of Safe Strategic Voting	210
<i>Noam Hazon and Edith Elkind</i>	
Bottleneck Congestion Games with Logarithmic Price of Anarchy	222
<i>Rajgopal Kannan and Costas Busch</i>	
Single-Parameter Combinatorial Auctions with Partially Public Valuations	234
<i>Gagan Goel, Chinmay Karande, and Lei Wang</i>	
On the Efficiency of Markets with Two-Sided Proportional Allocation Mechanisms	246
<i>Volodymyr Kuleshov and Adrian Vetta</i>	
Braess's Paradox for Flows over Time	262
<i>Martin Macko, Kate Larson, and Ľuboš Steskal</i>	
The Price of Anarchy in Network Creation Games Is (Mostly) Constant	276
<i>Matúš Mihalák and Jan Christoph Schlegel</i>	
Truthful Fair Division	288
<i>Elchanan Mossel and Omer Tamuz</i>	

No Regret Learning in Oligopolies: Cournot vs. Bertrand	300
<i>Uri Nadav and Georgios Piliouras</i>	
On the Complexity of Pareto-optimal Nash and Strong Equilibria	312
<i>Martin Hoefer and Alexander Skopalik</i>	
2-Player Nash and Nonsymmetric Bargaining Games: Algorithms and Structural Properties	323
<i>Vijay V. Vazirani</i>	
On the Inefficiency of Equilibria in Linear Bottleneck Congestion Games	335
<i>Bart de Keijzer, Guido Schäfer, and Orestis A. Telelis</i>	
Minimal Subsidies in Expense Sharing Games	347
<i>Reshef Meir, Yoram Bachrach, and Jeffrey S. Rosenschein</i>	
Author Index	359
