

## **Contents**

<b>1</b>	<b>INTRODUCTION</b>	<b>10</b>
1.1.	The chiari malformation type 1 (CM1) in humans	10
1.2.	Classification	10
1.3.	The chiari-like malformation (CLM) in the Cavalier King Charles Spaniel (CKCS)	12
1.4.	Morphological comparison of the chiari malformation type 1 (CM 1) and the chiari-like malformation (CLM)	13
1.4.1.	Herniation of the cerebellum	13
1.4.2.	Posterior cerebral fossa	13
1.4.3.	Body posture	14
1.4.4.	Diversity of dog breeds	15
1.5.	Prevalence of the chiari malformation type 1 (CM1) in humans	15
1.6.	Prevalence of the chiari like malformation (CLM) in the Cavalier King Charles Spaniel (CKCS)	16
1.7.	Genetics	16
1.8.	Genetic analysis of the chiari like malformation (CLM) in the Cavalier King Charles Spaniel (CKCS)	17
1.9.	Pathomorphogenesis of chiari malformation type 1 (CM 1) in humans	18
1.10.	Pathogenesis of the chiari like malformation (CLM) in the Cavalier King Charles Spaniel (CKCS)	19
1.11.	Association of chiari malformation type 1 (CM1) and chiari like malformation (CLM) with syringomyelia (SM).	20

1.12.	Normal movement of the cerebrospinal fluid	20
1.13.	Pathophysiology of syringomyelia (SM) in humans with chiari malformation type 1	21
1.14.	Development of syringomyelia (SM) in the Cavalier King Charles Spaniel (CKCS)	22
1.15.	Clinical symptoms of chiari malformation type 1 (CM1) and syringomyelia (SM) in humans	24
1.16.	Clinical symptoms in the Cavalier King Charles Spaniel (CKCS)	25
1.17.	Association of syringomyelia and clinical signs in dogs	27
1.18.	Critical evaluation of the definition of chiari malformation type 1 (CM1) and chiari like malformation (CLM)	27
1.19.	Morphogenesis of experimentally induced chiari malformations	30
1.20.	Shortcomings of the concept of an underdeveloped caudal fossa as the underlying cause for a cerebellar herniation	31
<b>2.</b>	<b>BASIC SCIENCES</b>	<b>39</b>
2.1.	Development of the cranial base and occipital bone in mammals	40
2.2.	Chondrocranium	40
2.3.	Genetic control of the growth in the synchondrosis	45
2.4.	Hormonal influence on growth of the mammalian cranial base	46
2.5.	Mechanical forces	47
3.1.	Allometric brain and skull growth in mammals	51
3.2.	Skull allometry	53
<b>4.</b>	<b>AIMS OF THE STUDY</b>	<b>57</b>

<b>5. RESULTS</b>	<b>59</b>
<b>5.1. Computerized tomographic determination of the volumes of the cranial cavities in brachycephalic dogs in comparison with Cavalier King Charles Spaniels with Chiari like malformation.</b>	<b>60</b>
<b>5.2. Cephalometric measurements and determination of the general skull shape of Cavalier King Charles Spaniels.</b>	<b>74</b>
<b>5.3. Volumetric analysis of the skull and brain in Cavalier King Charles Spaniels in comparison to dogs of different size. Martin J. Schmidt, Kerstin</b>	
<b>5.4. Comparison of the relative occipital bone volume between Cavalier King Charles Spaniels with and without syringohydromyelia and French Bulldogs.</b>	<b>108</b>
<b>5.5. Volume reduction of the jugular foramina in Cavalier King Charles Spaniels with syringomyelia.</b>	<b>120</b>
<b>5.6. Ultrasonographic anatomy of the cranio-cervical junction in normal brachycephalic dogs and dogs with chiari-like malformation.</b>	<b>134</b>

**5.7. Association between cephalometric parameters and the occurrence of syringomyelia in Cavalier King Charles Spaniels.**

147

**5.8. Temporal course of the closure of the cranial base synchondroses in the first 18 month of life in mesaticephalic and brachycephalic dogs compared to Cavalier King Charles Spaniels.**

159

**5.9. A potential role for substance P and interleukin 6 detected in the cerebrospinal fluid of Cavalier King Charles Spaniels for clinical symptoms associated with syringomyelia?**

175

**6 DISCUSSION 191**

**6.1 Comparative morphology as a method in modern veterinary science 192**

**6.2. Implications of the morphological findings of the brain and skull of the Cavalier King Charles Spaniel 193**

**6.3. The role of brachycephaly in the pathogenesis of the chiari like malformation in the Cavalier King Charles Spaniel 198**

**6.4. Achondroplasia in dogs 199**

**6.5. Impairment of the skull base growth in other diseases than achondroplasia 210**

**6.6. Neuroinflammatory basis of pain in the Cavalier King Charles Spaniel 212**

<b>7</b>	<b>Summary and Outlook</b>	<b>215</b>
