Preface — V

1	The chemical industry — 1
1.1	Introduction — 1
1.2	General characteristics of the chemical industry segments — 3
1.3	Major raw materials — 5
1.4	Production structure of the chemical industry — 5
2	The structure of chemical and biochemical process systems — 11
2.1	Structure of chemical and biochemical processes — 11
2.2	Characteristics of production processes — 12
2.2.1	Batch production technology — 12
2.2.2	Continuous processes — 14
2.3	Unit operations — 16
2.3.1	Reactors — 16
2.3.2	Recovery, purification, and fractionation technologies — 18
2.3.3	Product finishing operations — 20
2.3.4	Other important process units — 22
2.4	Process synthesis — 24
3	Principles of chemical reaction engineering — 26
3.1	Introduction — 27
3.2	Classification of reactions — 27
3.3	Rate of chemical reactions — 28
3.3.1	Effect of concentration — 29
3.3.2	Effect of temperature — 29
3.3.3	Chemical equilibria — 30
3.4	Catalysis — 32
3.4.1	Homogeneous catalysis — 32
3.4.2	Heterogeneous catalysis — 34
3.5	Conversion, selectivity, and yield — 36
3.5.1	The degree of conversion — 36
3.5.2	Selectivity and yield — 37
3.5.3	Multiple reactions — 38
3.6	Basic design equations for model reactors — 40
3.6.1	Material balances — 40
3.6.2	The ideal batch reactor — 40
3.6.3	The continuous ideal stirred tank reactor (CISTR) — 42

3.6.4	Ideal continuous tubular reactor —	43
3.6.5	Cascade of continuous ideal stirred tanks reactors —	45
3.7	Heat effects in model reactors —	45
3.7.1	Energy balances —	46
3.7.2	Characteristics of a continuous stirred tank reactor —	46
3.7.3	Batch reactors —	47

4 Chemical reactors and their industrial applications — 50

4.1	Introduction —	51
4.1.1	Classification of reactors —	51
4.1.2	Influence of the heat of reaction on the reactor type —	51
4.2	Stirred tank reactors —	52
4.2.1	Description —	52
4.2.2	Batch stirred tank reactors —	53
4.2.3	Continuously-stirred tanks —	55
4.2.4	Cascade of stirred tanks —	57
4.3	Tubular reactors —	58
4.3.1	Introduction —	58
4.3.2	Gas-phase reactors —	59
4.3.3	Liquid-phase reactors —	62
4.4	Loop reactors —	63
4.4.1	Continuous loop reactors —	63
4.4.2	Buss loop reactor —	64
4.5	Bubble columns —	65
4.6	Fixed and moving bed reactors —	68
4.6.1	Fixed bed reactors —	68
4.6.2	Adiabatic fixed bed reactors —	68
4.6.3	Fixed bed reactors with supply or removal of heat —	69
4.6.4	Moving bed reactors —	71
4.7	Fluidized bed reactors —	72
4.7.1	The fluidization principle —	73
4.7.2	Fluidization properties of typical bed solids —	74
4.7.3	Applications —	75

5 Biochemical reaction technology — 79

5.1	Characteristics of biochemical processes —	79
5.1.1	Fermentation —	80
5.1.2	Enzymatic conversions —	84
5.2	Biochemical reaction engineering —	87
5.2.1	Principles —	87
5.2.2	Kinetics of biochemical reactions —	88
5.2.3	Basic reactor operations —	92

5.3	Industrial bioreactors — 93
5.3.1	Classification — 93
5.3.2	Bioreactors with mechanical mixing — 94
5.3.3	Bioreactors with pneumatic mixing — 95
5.3.4	Bioreactors for immobilized enzymes and cells — 97
6	Evaporative separations — 99
6.1	Evaporative separation — 99
6.1.1	Introduction — 99
6.1.2	Vapor-liquid equilibria — 100
6.1.3	Separation by single-stage partial evaporation — 103
6.2	Multistage distillation — 105
6.2.1	Distillation cascades — 105
6.2.2	Column distillation — 106
6.2.3	Feasible distillation conditions — 107
6.2.4	Basic design calculations — 108
6.2.5	Energy requirements — 112
6.2.6	Batch distillation — 112
6.2.7	Continuous separation of multiple products — 113
6.2.8	Enhanced distillation techniques — 114
6.3	Distillation equipment — 117
6.3.1	Basic functions — 117
6.3.2	Tray columns — 117
6.3.3	Packed columns — 121
6.3.4	Criteria for column selection — 125
6.4	Polymer devolatilization — 126
6.4.1	Introduction — 126
6.4.2	Basic mechanisms — 127
6.4.3	Multistage operation and devolatilization aids — 128
6.4.4	Devolatilization equipment — 129
7	Extraction and leaching — 135
7.1	Liquid-liquid extraction — 135
7.1.1	Introduction — 135
7.1.2	Liquid-liquid equilibria — 137
7.1.3	Solvent selection — 138
7.1.4	Extraction schemes — 140
7.2	Industrial liquid-liquid extractors — 141
7.2.1	Mixer-settlers — 142
7.2.2	Mechanically agitated columns — 142
7.2.3	Unagitated and pulsed columns — 143

7.2.4	Centrifugal extractors —	145
7.2.5	Selection of an extractor —	146
7.3	Leaching —	147
7.3.1	Mechanism and process of leaching —	147
7.3.2	Solid-liquid extractors —	148
7.4	Supercritical extraction —	152
7.4.1	Introduction —	152
7.4.2	Properties of supercritical fluids —	152
7.4.3	Processes and applications —	155

8 Absorption and stripping — 160

8.1	Introduction —	161
8.2	The aim of absorption —	163
8.3	General design approach —	164
8.3.1	Gas solubilities —	165
8.3.2	Minimum absorbent flow —	167
8.3.3	Number of equilibrium stages —	167
8.4	Basic characteristics of absorbers —	168
8.5	Industrial contactors —	169
8.5.1	Packed columns —	169
8.5.2	Tray columns —	171
8.5.3	Spray towers —	173
8.5.4	Bubble columns —	173

9 Adsorption and ion exchange — 176

9.1	Introduction —	177
9.2	Adsorption fundamentals —	178
9.2.1	Industrial adsorbents —	178
9.2.2	Adsorption equilibrium —	182
9.2.3	Adsorption kinetics —	185
9.2.4	Fixed-bed adsorption —	186
9.3	Basic adsorption cycles —	188
9.3.1	Temperature swing —	189
9.3.2	Pressure swing —	190
9.3.3	Inert and displacement purge cycles —	190
9.4	Principles of ion exchange —	191
9.4.1	Ion-exchange resins —	191
9.4.2	Equilibria and selectivity —	193
9.5	Ion-exchange processes —	194

10	Solid-liquid separation — 197
10.1	Introduction — 197
10.2	Gravity sedimentation — 201
10.2.1	Sedimentation mechanisms — 201
10.2.2	Rate of sedimentation — 203
10.2.3	Design of continuous sedimentation tanks — 205
10.2.4	Gravity sedimentation equipment — 206
10.3	Centrifugal sedimentation — 207
10.3.1	Particle velocity in a centrifugal field — 207
10.3.2	Sedimenting centrifuges — 208
10.3.3	Bowl centrifuge separation capability — 210
10.3.4	Hydrocyclones — 211
10.4	Filtration fundamentals — 214
10.4.1	Flow through packed beds — 214
10.4.2	Cake filtration — 215
10.4.3	Constant pressure and constant rate filtration — 216
10.5	Filtration equipment — 217
10.5.1	Continuous large-scale vacuum filters — 218
10.5.2	Batch vacuum filters — 220
10.5.3	Pressure filters — 220
10.6	Filter media — 223
10.7	Centrifugal filtration — 224
10.8	Deep-bed filtration — 226
11	Particle removal from gases — 228
11.1	Introduction — 229
11.1.1	Separation mechanisms — 229
11.2	Collecting efficiency — 231
11.3	Gravitational separators — 233
11.4	Cyclones — 234
11.5	Electrostatic precipitation — 237
11.5.1	Principles — 237
11.5.2	Equipment and collecting efficiency — 238
11.6	Particle interception mechanisms — 241
11.7	Dry-impingement separators — 242
11.7.1	Deep-bed filtration — 243
11.7.2	Surface filters — 244
11.7.3	Lamellar plate separators — 245
11.8	Wet scrubbers — 246

12	Membrane separations — 251
12.1	Introduction — 251
12.2	Principles — 253
12.2.1	Membranes — 253
12.2.2	Modules — 256
12.2.3	Flux, permeability and selectivity — 258
12.2.4	Concentration polarization and fouling — 260
12.2.5	System design and cascades — 261
12.3	Membrane filtration processes — 263
12.3.1	Microfiltration — 263
12.3.2	Ultrafiltration — 264
12.3.3	Reverse osmosis and nanofiltration — 265
12.4	Solubility driven processes — 267
12.4.1	Gas and vapor permeation — 267
12.4.2	Pervaporation — 269
12.5	Electrodialysis — 271
13	Crystallization and precipitation — 273
13.1	Introduction — 273
13.2	Fundamentals — 275
13.2.1	Solid-liquid equilibria — 275
13.2.2	Supersaturation and metastability — 276
13.2.3	Nucleation — 277
13.2.4	Crystal growth — 279
13.2.5	Effects of impurities — 281
13.3	Crystal characteristics — 281
13.3.1	Morphology — 282
13.3.2	Crystal size distribution — 283
13.3.3	Size control — 283
13.4	Crystallization from solutions — 284
13.4.1	Basic operations — 284
13.4.2	Cooling crystallizers — 285
13.4.3	Evaporating and vacuum crystallizers — 286
13.4.4	Continuous crystallizers — 287
13.5	Crystallizer modeling and design — 288
13.5.1	Basic yield calculations — 289
13.5.2	Population balances — 291
13.5.3	The well-mixed MSMPR crystallizer — 292
13.6	Precipitation — 293
13.7	Melt crystallization — 294

14	Solids finishing technologies — 297
14.1	Overview — 297
14.2	Drying — 298
14.2.1	Classification of drying operations — 299
14.2.2	Drying mechanisms — 300
14.2.3	Direct-heat dryers — 302
14.2.4	Contact dryers — 307
14.2.5	Other drying methods — 309
14.3	Size reduction — 310
14.3.1	Particle breakage — 311
14.3.2	Methods and selection criteria for size reduction — 313
14.3.3	Size-reduction equipment — 315
14.4	Size enlargement — 320
14.4.1	Agglomeration principles — 320
14.4.2	Methods of size enlargement — 322
14.4.3	Growth/tumble agglomeration — 322
14.4.4	Pressure agglomeration — 325
14.4.5	Other agglomeration techniques — 327
14.5	Conveying — 327
14.5.1	Transportation systems — 327
14.5.2	Mechanical conveyors — 328
14.5.3	Pneumatic conveying — 332
15	Product technology — 337
15.1	Cheese-coating technology — 337
15.1.1	Cheese production — 337
15.1.2	Coatings — 338
15.1.3	Application techniques — 338
15.2	Enzyme formulation — 341
15.2.1	Introduction — 341
15.2.2	Glucose isomerase immobilization — 342
15.2.3	Detergent enzymes — 344
15.2.4	Application research — 347
15.3	Compounding — 349
15.3.1	Introduction — 349
15.3.2	Compound formulation — 350
15.3.3	Additives — 351
15.3.4	Polymer-mixing mechanisms — 355
15.3.5	Compounding equipment — 356
15.4	Polymer processing — 361
15.4.1	Extrusion processes — 361
15.4.2	Injection and blow molding — 363

15.4.3	Melt and gel spinning —	366
15.4.4	Film production techniques —	368
15.4.5	Thermoforming —	371
15.4.6	Foam extrusion —	372
16	Development and engineering —	374
16.1	Introduction —	375
16.1.1	General aspects of scaling up —	375
16.1.2	Ways of scaling up —	376
16.2	Development and scale-up in the bulk chemical industry —	377
16.2.1	Basic course of process development —	377
16.2.2	Laboratory and bench scale research —	379
16.2.3	Pilot plant research and demonstration plants —	382
16.2.4	Feasibility evaluation —	384
16.3	Engineering and construction —	384
16.3.1	Introduction —	384
16.3.2	Conceptual engineering —	387
16.3.3	Basic engineering —	389
16.3.4	Detailed engineering, procurement, and construction —	391
16.4	Development and scale-up of fine chemical processes —	393
16.4.1	Differences between bulk and fine chemical industry —	393
16.4.2	Fine chemical process development —	394
16.4.3	Scale-up challenges in multipurpose plants —	395
16.4.4	Future developments —	398
17	Hydrodynamic aspects of scale-up —	400
17.1	Introduction —	401
17.2	Mixing and stirring —	403
17.2.1	Basic principles —	403
17.2.2	Liquid mixing equipment —	404
17.2.3	Single phase systems —	408
17.2.4	Multiphase systems —	408
17.2.5	Scale-up and scale-down procedures —	411
17.3	Scale-up methodology for mixing processes —	412
17.3.1	Dimensional, similarity, and regime analysis —	413
17.3.2	Important dimensionless numbers for mixing processes —	415
17.4	Computational fluid dynamics (CFD) —	416
17.4.1	Introduction —	416
17.4.2	Basic principles —	416
17.4.3	Applications —	419

18	Process safety — 422
18.1	Safety problems in chemical plants — 423
18.2	Development, design, and construction of safe plants — 425
18.2.1	Introduction — 425
18.2.2	Safety assessment — 425
18.2.3	Structure of safety studies — 427
18.3	Identification of hazardous properties of substances — 429
18.3.1	Pure components — 429
18.3.2	Exothermic chemical reactions — 431
18.4	Inherently safer plant design — 433
18.4.1	The concept and its benefits — 433
18.4.2	The road to friendlier plants — 434

A	Base chemicals — 437
A.1	Ammonia — 437
A.1.1	General description — 437
A.1.2	Desulphurization — 438
A.1.3	Primary and secondary reforming — 438
A.1.4	Shift conversion — 438
A.1.5	Carbon dioxide removal — 439
A.1.6	Final purification — 439
A.1.7	Ammonia syntheses and recovery — 440
A.2	Inorganic acids — 441
A.2.1	Nitric acid — 441
A.2.2	Sulfuric acid — 442
A.3	Ammonia-based products — 444
A.3.1	Caprolactam — 444
A.3.2	Acrylonitrile — 446
A.3.3	Urea — 447
A.3.4	Melamine — 449
A.4	Naptha cracking — 450
A.4.1	Basic principles — 450
A.4.2	Hot section — 451
A.4.3	Cold section — 453
A.4.4	Coke formation — 454
A.5	Oxidation processes — 454
A.5.1	Toluene oxidation — 454
A.5.2	Cyclohexane oxidation — 456
A.5.3	<i>n</i> -butane oxidation — 457
A.6	Fischer–Tropsch — 459
A.6.1	Synthesis gas production — 460
A.6.2	Fischer–Tropsch synthesis — 461

B Polymer Manufacturing — 465

- B.1 Polyethylene — 465
 - B.1.1 High-pressure process — 465
 - B.1.2 Solution polymerization — 466
 - B.1.3 Slurry process — 467
 - B.1.4 Gas-phase process — 468
- B.2 Polypropylene — 471
 - B.2.1 Gas-phase process — 471
 - B.2.2 Slurry process — 472
- B.3 EPDM — 474
- B.4 Polyamides — 476
 - B.4.1 Introduction — 476
 - B.4.2 Nylon 6 — 477
 - B.4.3 Nylon 4,6 — 478
- B.5 Saturated and unsaturated polyesters — 479
 - B.5.1 Saturated polyesters — 479
 - B.5.2 Unsaturated polyesters — 481
 - B.5.3 Powder coatings — 482

C Life science products — 484

- C.1 Benzaldehyde-based products — 485
 - C.1.1 Amino acids — 485
 - C.1.2 Cinnamon aldehyde and cinnamyl alcohol — 487
 - C.1.3 Benzylalcohol — 488
- C.2 α -picoline — 488
- C.3 Aspartame — 491
- C.4 Penicillin — 492
- C.5 Synthetic antibiotics — 495
 - C.5.1 Introduction — 495
 - C.5.2 Cephalosporins — 496
 - C.5.3 Amoxillins — 497
- C.6 Glyoxylic acid — 498
- C.7 Food additives — 500
 - C.7.1 Quinine — 500
 - C.7.2 Enzymes — 501

References and further reading — 503
