

Contents

1. Introduction	1
2. Theory of Time Series Modeling and Risk Estimation	5
2.1. Financial Econometrics	6
2.1.1. GARCH models	6
2.1.2. FIGARCH	8
2.2. Model Choice and Validation	10
2.2.1. Detecting the Autocorrelation	10
2.2.2. Testing for Long-Range Dependency	11
2.3. The innovation process	13
2.3.1. Lévy Processes	13
2.3.2. Subordination	15
2.3.3. Time-changed Stochastic Process	16
2.3.4. Time-changed Brownian Motion	16
2.3.5. The α -stable Process	17
2.3.6. Tempered Stable Distribution	20
2.3.7. CTS Subordinator	22
2.3.8. Univariate Normal Tempered Stable Distribution	23
2.3.9. Standard Univariate NTS	24
2.3.10. Multivariate Standard Normal Tempered Stable Distribution	26
2.4. Goodness of Fit	28
2.4.1. Kolmogorov-Smirnov-Test	28

2.4.2.	Anderson-Darling Test	29
2.5.	Risk Management	30
2.5.1.	Value-at-Risk	30
2.5.2.	Coherent Risk Measures	32
2.5.3.	Average Value-at-Risk	32
2.5.4.	Computation	33
2.5.5.	Backtesting	34
3.	Data and Methodology	37
3.1.	Data Selection	38
3.2.	Data Transformation	39
3.3.	Autocorrelation and Dependence	42
3.4.	Empirical Estimation and GoF Tests	44
3.4.1.	Index Returns	45
3.4.2.	Stock Returns	48
3.4.3.	ARMA-GARCH	51
3.5.	Comparison of Risk Measures for ARMA-GARCH Models	57
3.5.1.	Risk Prediction	57
3.5.2.	Backtestings	59
4.	Conclusion	61
A.	DAX 30 Stocks	63
	Bibliography	67
