Preface — V

1 General introduction — 1

- 1.1 Definition of the interfacial region and interfacial tension — 1
- 1.2 Role of interfacial phenomena — 3
- 1.3 Outline of the book — 9

2 Origin of charge at interfaces: Structure of the electrical double layer — 17

- 2.1 Origin of charge on surfaces — 17
 - 2.1.1 Surface ions — 17
 - 2.1.2 Ionization of surface groups — 17
 - 2.1.3 Isomorphic substitution — 19
 - 2.1.4 Specific adsorption of ions — 20
- 2.2 Structure of the electrical double layer — 21
 - 2.2.1 Diffuse double layer (Gouy and Chapman) — 21
 - 2.2.2 Stern–Grahame model of the double layer — 25
 - 2.2.3 Capacitance of the double layer — 28
 - 2.2.4 Double layer investigation — 30

3 Electrokinetic phenomena and zeta potential — 41

- 3.1 Stern–Grahame model of the double layer — 45
 - 3.1.1 Calculation of zeta potential from particle mobility — 46
 - 3.1.2 Measurement of electrophoretic mobility and zeta potential — 51

4 Van der Waals attraction — 65

- 4.1 Introduction — 65
- 4.2 Intermolecular attraction between atoms or molecules — 65
 - 4.2.1 Dipole-dipole interaction (Keesom–van der Waals interaction) — 66
 - 4.2.2 Dipole-induced dipole interaction (Debye–van der Waals Interaction) — 66
 - 4.2.3 London–van der Waals interaction (dispersion interaction) — 67
 - 4.2.4 General approach for the van der Waals attraction — 67
 - 4.2.5 Hydrogen bonding — 68
 - 4.2.6 Hydrophobic (bonding) interaction — 69
 - 4.2.7 Van der Waals attraction of macroscopic bodies — 69
 - 4.2.8 Medium effect on van der Waals attraction — 74

4.2.9	Retardation effect —	77
4.2.10	Direct measurement of van de Waals attraction between macroscopic bodies —	78
5	Double layer repulsion —	81
5.1	Introduction —	81
5.2	Interaction between similar and dissimilar flat plates —	82
5.3	Calculation of electrostatic interaction using the Gibbs energy concept —	84
5.4	Charge and potential distribution —	86
5.5	Interaction between spherical particles —	88
5.6	Effect of increasing electrolyte concentration, valency of counterions and Stern potential —	92
5.7	Effect of particle concentration —	92
6	Combination of double layer repulsion and van der Waals attraction theory of colloid stability —	97
6.1	Introduction —	97
6.2	Stability of charge stabilized systems. Theory of colloid stability of hydrophobic colloids: Deryaguin–Landau–Verwey–Overbeek (DLVO) theory —	97
6.3	Mechanism of aggregation —	99
6.4	Kinetics of flocculation of dispersions —	101
6.4.1	Diffusion limited aggregation (fast flocculation kinetics) —	101
6.4.2	Potential limited aggregation (slow flocculation kinetics) —	103
6.4.3	Weak (reversible) flocculation —	104
6.4.4	Orthokinetic flocculation —	105
6.4.5	Aggregate structure —	109
6.5	Influence of particle number concentration —	110
6.6	States of suspension on standing —	114
6.7	Sedimentation of suspensions and its prevention —	119
6.7.1	Sedimentation rate of suspensions —	120
6.7.2	Prevention of sedimentation and formation of dilatant sediments —	125
7	The liquid/liquid interface and surfactant adsorption —	133
7.1	Introduction —	133
7.2	Surfactant adsorption —	134
7.2.1	The Gibbs adsorption isotherm —	134
7.2.2	Equation of state approach —	137
7.2.3	The Langmuir, Szyszkowski and Frumkin equations —	139

7.3	Effectiveness of surfactant adsorption at the liquid/liquid interface —	140
7.4	Efficiency of adsorption of surfactant at the liquid/liquid interface —	140
7.5	Adsorption from mixtures of two surfactants —	142
7.6	Interfacial tension measurements —	143
7.6.1	The Wilhelmy plate method —	143
7.6.2	The pendent drop method —	144
7.6.3	The du Nouy ring method —	144
7.6.4	The drop volume (weight) method —	145
7.6.5	The spinning drop method —	146
7.7	Interfacial rheology —	147
7.7.1	Interfacial shear viscosity —	147
7.7.2	Measurement of interfacial viscosity —	147
7.7.3	Interfacial dilational elasticity —	148
7.7.4	Interfacial dilational viscosity —	148
7.7.5	Non-Newtonian effects —	149
7.8	Correlation of emulsion stability with interfacial rheology —	149
7.8.1	Mixed surfactant films —	149
7.8.2	Protein films —	150
8	The solid/liquid interface and surfactant adsorption —	153
8.1	Introduction —	153
8.2	Adsorption of ionic surfactants on hydrophobic surfaces —	154
8.3	Examples of adsorption isotherms for ionic surfactants on hydrophobic surfaces —	158
8.4	Adsorption of ionic surfactants on polar surfaces —	161
8.5	Adsorption of nonionic surfactants —	162
8.6	Theoretical treatment of surfactant adsorption —	165
8.7	Examples of typical adsorption isotherms of model nonionic surfactants on hydrophobic solids —	166
9	Polymers at interfaces —	171
9.1	Introduction —	171
9.2	Polymers (macromolecules) —	172
9.3	Solution properties of polymers —	173
9.4	General classification of polymeric surfactants —	179
9.5	Polymers at interfaces —	181
9.6	Theories of polymer adsorption —	185
9.7	Scaling theory for polymer adsorption —	193
9.8	Experimental techniques for studying polymeric surfactant adsorption —	195

9.8.1	Measurement of the adsorption isotherm —	195
9.8.2	Measurement of the fraction of segments p —	196
9.8.3	Determination of the segment density distribution $p(z)$ and adsorbed layer thickness δ_h —	196
9.9	Examples of the adsorption isotherms of nonionic polymeric surfactants —	200
9.10	Kinetics of polymer adsorption —	205
10	Interaction between particles or droplets containing adsorbed polymer layers and the theory of steric stabilization —	209
10.1	Introduction —	209
10.2	Interaction between particles or droplets containing adsorbed polymer layers —	209
10.2.1	Mixing interaction G_{mix} —	210
10.2.2	Elastic interaction G_{el} —	212
10.2.3	Total energy of interaction —	213
10.2.4	Criteria for effective steric stabilization —	213
10.3	Flocculation of sterically stabilized dispersions —	214
10.3.1	Weak flocculation —	214
10.3.2	Incipient flocculation —	215
10.3.3	Depletion flocculation —	217
10.4	Bridging flocculation by polymers and polyelectrolytes —	218
10.5	Emulsions stabilized by polymeric surfactants —	221
10.6	Suspensions stabilized using polymeric surfactants —	226
10.6.1	Polymeric surfactants in emulsion polymerization —	227
10.6.2	Dispersion polymerization —	232
10.7	Polymeric surfactants for stabilization of preformed latex dispersions —	233
10.8	Interaction forces between adsorbed layers of PMMA/MA(PEO) $_n$ graft copolymer —	237
10.9	Use of polymeric surfactants for preparation and stabilization of nanoemulsions —	240
11	Wetting and spreading —	247
11.1	Introduction —	247
11.2	The concept of contact angle —	249
11.3	Adhesion tension —	251
11.4	Work of adhesion W_a —	252
11.5	Work of cohesion —	252
11.6	Calculation of surface tension and contact angle —	253
11.6.1	Good and Girifalco approach —	254
11.6.2	Fowkes treatment —	255

11.7	The spreading of liquids on surfaces: The spreading coefficient S —	257
11.8	Contact angle hysteresis —	257
11.8.1	Reasons for hysteresis —	259
11.8.2	Wenzel's equation —	259
11.8.3	Surface Heterogeneity —	260
11.9	The critical surface tension of wetting —	260
11.10	Effect of surfactant adsorption —	262
11.11	Wetting of powders by liquids —	263
11.12	Rate of penetration of liquids: The Rideal–Washburn equation —	265
11.13	Measurement of contact angles of liquids and surfactant solutions on powders —	266
11.14	Assessment of wettability of powders —	266
11.14.1	Sinking time, submersion or immersion test —	266
11.14.2	List of wetting agents for hydrophobic solids in water —	267
11.15	Measurement of contact angles on flat surfaces —	268
11.15.1	Sessile drop or adhering gas bubble method —	268
11.15.2	Wilhelmy plate method —	269
11.15.3	Capillary rise at a vertical plate —	270
11.15.4	Tilting plate method —	271
11.15.5	Capillary rise or depression method —	271
11.16	Wetting kinetics —	271
11.16.1	The dynamic contact angle —	272
11.16.2	Effect of viscosity and surface tension —	275
12	Dynamic process of adsorption and wetting —	277
12.1	Introduction —	277
12.2	General theory of adsorption kinetics —	277
12.3	Adsorption kinetics from micellar solutions —	281
12.4	Adsorption kinetics at the liquid/liquid interface —	283
12.5	Dilational viscoelasticity of surfactant solutions —	284
12.6	Experimental techniques for studying adsorption kinetics —	288
12.6.1	The drop volume technique —	288
12.6.2	Maximum bubble pressure technique —	290
12.6.3	Profile analysis tensiometry (PAT) —	293
12.6.4	Capillary pressure tensiometry —	294
12.6.5	Interfacial viscoelastic measurements —	298
13	Particle deposition and adhesion —	303
13.1	Deposition of particles on surfaces —	303
13.1.1	Introduction —	303
13.1.2	Description of particle deposition —	304

13.1.3	Interaction forces in particle deposition —	307
13.1.4	Effect of polymers and polyelectrolytes on particle deposition —	311
13.1.5	Experimental methods for studying kinetics of particle deposition —	314
13.1.6	Linear deposition regime —	317
13.1.7	Nonlinear particle deposition (high coverage) —	324
13.1.8	Particle deposition on heterogeneous surfaces —	329
13.2	Particle-surface adhesion —	333
13.2.1	Surface energy approach to adhesion —	333
13.2.2	Experimental methods for measurement of particle-surface adhesion —	335
