Contents

1 **Theory of the Decoherence Effect in Finite and Infinite Open Quantum Systems Using the Algebraic Approach** 1
Philippe Blanchard, Mario Hellmich, Piotr Ługiewicz, and Robert Olkiewicz
1.1 Preliminaries 1
1.2 Algebraic Framework and Open Systems 3
1.3 Decoherence 8
1.4 Some General Results About Decoherence 13
1.5 Examples 17
References 31

2 **Quantum Systems and Resolvent Algebras** 33
Detlev Buchholz and Hendrik Grundling
2.1 Introduction 33
2.2 Definitions and Basic Facts 35
2.3 Ideals and Dimension 37
2.4 Observables and Dynamics 39
2.5 Conclusions 43
References 44

3 **What the Philosophical Interpretation of Quantum Theory Can Accomplish** 47
Martin Carrier
3.1 Introduction: What Philosophy Can Do for Science 47
3.2 Traditional Puzzles and Positions in Quantum Philosophy 48
3.3 Entanglement and the EPR-Correlations 52
3.4 Puzzling Features of Entanglement 55
3.5 Quantum Measurement and Decoherence 57
3.6 What the Philosophical Interpretation of Quantum Theory Can Accomplish 61
References 62

4 On the Sufficiency of the Wavefunction 65
Roger Colbeck and Renato Renner
4.1 Introduction 65
4.2 Overview of the Main Claims 66
4.3 Predictions 68
4.4 Free Choice 71
4.5 Bipartite Measurement Scenario 73
4.6 Free Choice and Local Causality 77
4.7 Basic Claims 79
4.8 Proof of the Basic Claims 81
4.9 Generalised Claims 85
4.10 Discussion 89
References 92

5 The Role of the Probability Current for Time Measurements 95
Nicola Vona and Detlef Dürr
5.1 Introduction 95
5.2 What is a Measurement? 96
5.3 Time Statistics 100
5.4 The Bohmian View 103
5.5 When Will the Detector Click? 107
Appendix: Example of Backflow 109
References 111

6 Quantum Field Theory on Curved Spacetime and the Standard Cosmological Model 113
Klaus Fredenhagen and Thomas-Paul Hack
6.1 Introduction 113
6.2 The Free Scalar Field and Its Normal Ordered Products 115
6.3 The Standard Cosmological Model in Quantum Field Theory on Curved Spacetimes 119
References 127

7 Quantum Probability Theory and the Foundations of Quantum Mechanics 131
Jürg Fröhlich and Baptiste Schubnel
7.1 A Glimpse of Quantum Probability Theory and of a Quantum Theory of Experiments 131
7.2 Models of Physical Systems 142
7.3 Classical ("Realistic") Models of Physical Systems 154
7.4 Physical Systems in Quantum Mechanics 158
7.5 Removing the Veil: Empirical Properties of Physical Systems in Quantum Mechanics 168
References 190

8 Can Relativity be Considered Complete? From Newtonian Nonlocality to Quantum Nonlocality and Beyond 195
Nicolas Gisin
8.1 Introduction 195
8.2 Non-locality According to Newton 195
8.3 Einstein, the Greatest Mechanical Engineer 196
8.4 Quantum Mechanics Is Not Mechanical 197
8.5 Non-locality According to Einstein 197
8.6 Quantum Exams: Entanglement 198
8.7 Coin Tossing at a Distance 202
8.8 Experiments: God Does Play Dice, He Even Plays with Nonlocal Dice 204
8.9 Entanglement as a Cause of Correlation 204
8.10 From Quantum Nonlocality to Mere Nonlocality 205
8.11 Conclusion 214
References 214

9 Faces of Quantum Physics 219
Rudolf Haag
Preface 219
9.1 Introduction 219
9.2 Reality, Individuality, Phenomena 220
9.3 Observables in Quantum Mechanics 223
9.4 Field Theory and High Energy Experiments 230
9.5 Concluding Remarks and Outlook 232
References 234

10 Computation Through Neuronal Oscillations 235
K. Hepp
10.1 Introduction 235
10.2 Connectome 237
10.3 Neuro-Electrodynamics 240
10.4 Manifestations of Neural Oscillations in Active Vision 243
10.5 Conclusion 249
References 251

11 Local Properties, Growth and Transport of Entanglement 257
Roland Omnès
11.1 Introduction 257
11.2 A Topological Aspect of Entanglement 258
11.3 A Schrödinger Equation for Local Entanglement 260
11.4 Some Mathematical Aspects of the Construction 263
11.5 An Approach Using Quantum Field Theory 264
11.6 Growth and Transport of Entanglement 266
11.7 An Example 268
11.8 Conclusions and Perspectives 269
References 270

12 Unavoidable Decoherence in Matter Wave Interferometry 273
Helmut Rauch
12.1 Introduction 273
12.2 Position Post-selection 277
12.3 Momentum Post-selection 277
12.4 Time Post-selection 284
12.5 Unavoidable Losses 285
12.6 Discussion 287
References 288

13 Classical-Like Trajectories of a Quantum Particle in a Cloud Chamber 291
G. Dell'Antonio, R. Figari, and A. Teta
13.1 The Wilson Cloud Chamber 291
13.2 The Earliest Theoretical Investigations 293
13.3 Mott's Analysis 296
13.4 The Role of Semi-classical Analysis 301
13.5 Mott's Analysis Revisited 303
13.6 Different Approaches and Open Problems 309
References 311

14 Quantum Mechanics of Time 315
Andreas Ruschhaupt and Reinhard F. Werner
14.1 Introduction 315
14.2 Overview 316
14.3 Energy-Time Uncertainty Relation 319
14.4 Tunnelling Time 321
References 322

15 Localization and Entanglement in Relativistic Quantum Physics 325
Jakob Yngvason
15.1 Introduction 325
15.2 What is Relativistic Quantum Physics? 326
15.3 Local Quantum Physics 329
15.4 The Structure of Local Algebras 336
15.5 Entanglement in LQP 341
References 345
