Preface — V

General Introduction — 1

1	Cosmetics and personal care — 17
1.1	Introduction — 17
1.2	Surfactants used in cosmetic formulations — 20
1.3	Interaction forces and their combination — 23
1.4	Cosmetic emulsions — 29
1.5	Self-assembly structures in cosmetic formulations — 40
1.5.1	Structure of liquid crystalline phases — 40
1.5.2	Hexagonal phase — 40
1.5.3	Micellar cubic phase — 41
1.5.4	Lamellar phase — 42
1.5.5	Discontinuous cubic phases — 42
1.5.6	Reversed structures — 43
1.6	Driving force for liquid crystalline phases formation — 43
1.7	Polymeric surfactants in cosmetic formulations — 44
1.8	Nanoemulsions in cosmetics — 48
1.9	Multiple emulsions in cosmetics — 55
1.10	Liposomes and vesicles in cosmetics — 62
1.11	Shampoos and gels — 64
1.12	Hair conditioners — 71
1.12.1	Surface properties of hair — 72
1.13	Sunscreen dispersions for UV protection — 76
1.14	Color cosmetics — 78
1.15	Industrial examples of cosmetics and personal care formulations — 85
1.15.1	Shaving formulations — 85
1.15.2	Bar soaps — 87
1.15.3	Liquid hand soaps — 88
1.15.4	Bath oils — 88
1.15.5	Foam (or bubble) baths — 89
1.15.6	After bath preparations — 89
1.15.7	Skin care products — 89
1.15.8	Hair care formulations — 91
1.15.9	Sunscreens — 94
1.15.10	Make-up products — 96

2	Interfacial aspects of pharmaceutical systems — 101
2.1	Introduction — 101
2.2	Disperse systems — 101
2.2.1	Thermodynamic considerations — 101
2.2.2	Kinetic stability of disperse systems and the general stabilization mechanisms — 102
2.2.3	Steric stabilization — 106
2.3	Nanodispersions — 110
2.3.1	Nanoemulsions — 110
2.3.2	Nanosuspensions — 118
2.4	Surface activity and colloidal properties of drugs — 126
2.5	Naturally occurring micelle forming systems — 130
2.6	Biological implications of the presence of surfactants in pharmaceutical formulations — 133
2.7	Solubilized systems — 135
2.7.1	Experimental methods of studying solubilization — 136
2.7.2	Mobility of solubilize molecules — 140
2.7.3	Factors affecting solubilization — 140
2.8	Liposomes and vesicles in pharmacy — 141
2.8.1	Stabilization of liposomes by incorporation of block copolymers — 143
2.9	Liquid Crystalline Phases and Microemulsions — 143
2.10	Solid lipid nanoparticles (SLN) — 147
2.11	Polymer gels, microgels, and capsules — 147
2.12	Solid polymer nanoparticles — 150
2.13	Nanoparticles, drug delivery and drug targeting — 152
2.13.1	The reticuloendothelial system (RES) — 152
2.13.2	Influence of particle characteristics — 153
2.13.3	Surface modified polystyrene particles as model carriers — 153
2.13.4	Biodegradable polymeric carriers — 154
3	Interfacial aspects of agrochemical formulations — 165
3.1	Introduction — 165
3.2	Surfactants used in agrochemical formulations — 168
3.2.1	Anionic surfactants — 168
3.2.2	Cationic surfactants — 169
3.2.3	Amphoteric (zwitterionic) surfactants — 169
3.2.4	Nonionic surfactants — 170
3.2.5	Alcohol ethoxylates — 171
3.2.6	Alkyl phenol ethoxylates — 171
3.2.7	Fatty acid ethoxylates — 172

- 3.2.8 Sorbitan esters and their ethoxylated derivatives
(Spans and Tweens) — 172
- 3.2.9 Ethoxylated fats and oils — 173
- 3.2.10 Amine ethoxylates — 173
- 3.2.11 Surfactants derived from mono- and polysaccharides — 174
- 3.2.12 Specialty surfactants – Fluorocarbon and silicone surfactants — 174
- 3.2.13 Polymeric surfactants: Ethylene oxide-propylene oxide co-polymers
(EO/PO) — 175
- 3.3 Properties of surfactant solutions — 176
- 3.3.1 Solubility-temperature relationship for surfactants — 178
- 3.4 Interfacial aspects of agrochemical formulations — 179
- 3.4.1 Equilibrium adsorption of surfactants at the air/liquid
and liquid/liquid interface — 180
- 3.4.2 Dynamic processes of adsorption — 182
- 3.5 Adsorption of surfactants and polymeric surfactants
at the solid/liquid interface — 187
- 3.6 Interaction forces between particles or droplets in agrochemical
dispersions (suspension concentrates or emulsions, EW's) and their
role in colloid stability — 201
- 3.7 Emulsion concentrates (EW's) — 209
- 3.7.1 Formation of emulsions — 209
- 3.7.2 Selection of emulsifiers — 213
- 3.7.3 Emulsion stability — 217
- 3.7.4 Experimental methods for assessment of emulsion stability — 224
- 3.8 Suspension concentrates — 227
- 3.8.1 Preparation of suspension concentrates and the role of surfactants/
dispersing agents — 227
- 3.8.2 Control of the physical stability of suspension concentrates — 232
- 3.8.3 Characterization of suspension concentrates and assessment
of their long-term physical stability — 244
- 3.9 Microemulsions in agrochemical formulations — 257
- 3.10 Controlled-release formulations — 261
- 3.11 Adjuvants in agrochemicals — 266

- 4 Interfacial aspects of paints and coatings — 283
- 4.1 Introduction — 283
- 4.2 Emulsion, dispersion and suspension polymerization — 290
- 4.2.1 Emulsion polymerization — 290
- 4.2.2 Dispersion polymerization — 299
- 4.3 Pigment dispersion — 303
- 4.3.1 Wetting of powder aggregates and agglomerates — 303

4.3.2	Breaking of aggregates and agglomerates (deagglomeration) —	311
4.3.3	Classification of dispersants —	312
4.4	Assessment and selection of dispersants —	314
4.4.1	Adsorption isotherms —	314
4.4.2	Measurement of dispersion and particle size distribution —	316
4.5	Wet milling (Comminution) —	321
4.5.1	Bead mills —	323
4.5.2	Principle of operation of bead mills —	324
4.6	Rheology of paints —	324
4.7	Examples of the flow properties of some commercial paints —	346
5	Interfacial aspects of food colloids —	351
5.1	Introduction —	351
5.2	Interaction between food-grade surfactants and water —	352
5.2.1	Liquid crystalline structures —	352
5.2.2	Binary phase diagrams —	354
5.2.3	Ternary phase diagrams —	358
5.3	Monolayer formation —	358
5.4	Liquid crystalline phases and emulsion stability —	363
5.5	Proteins —	364
5.5.1	Interfacial properties of proteins at the liquid/liquid interface —	366
5.5.2	Proteins as emulsifiers —	367
5.6	Protein-polysaccharide interactions in food colloids —	368
5.7	Polysaccharide-surfactant interactions —	369
5.8	Surfactant association structures, microemulsions and emulsions in food —	370
5.9	Rheology of food emulsions —	373
5.9.1	Interfacial rheology —	373
5.9.2	Bulk rheology of emulsions —	378
5.9.3	Rheology of microgel dispersions —	381
5.9.4	Fractal nature of the aggregated network —	382
5.10	Food rheology and mouth feel —	383
5.10.1	Mouth feel of foods – role of rheology —	386
5.10.2	Break-up of Newtonian liquids —	388
5.10.3	Break-up of non-Newtonian liquids —	388
5.10.4	Complexity of flow in the oral cavity —	389
5.10.5	Rheology-texture relationship —	389
5.11	Practical applications of food colloids —	392
