List of Abbreviations XLV

1 Introduction
Janusz Kacprzyk, Witold Pedrycz 1

1.1 Details of the Contents 2

1.2 Conclusions and Acknowledgments 4

Part A Foundations

2 Many-Valued and Fuzzy Logics
Siegfried Gottwald 7

2.1 Basic Many-Valued Logics 8

2.2 Fuzzy Sets 11

2.3 *t*-Norm-Based Logics 13

2.4 Particular Fuzzy Logics 16

2.5 Some Generalizations 21

2.6 Extensions with Graded Notions of Inference 23

2.7 Some Complexity Results 25

2.8 Concluding Remarks 27

References 27

3 Possibility Theory and Its Applications: Where Do We Stand?
Didier Dubois, Henry Prade 31

3.1 Historical Background 32

3.2 Basic Notions of Possibility Theory 33

3.3 Qualitative Possibility Theory 38

3.4 Quantitative Possibility Theory 45

3.5 Some Applications 49

3.6 Some Current Research Lines 53

References 54

4 Aggregation Functions on [0,1]
Radko Mesiar, Anna Kolesárová, Magda Komorníková 61

4.1 Historical and Introductory Remarks 61

4.2 Classification of Aggregation Functions 63

4.3 Properties and Construction Methods 66

4.4 Concluding Remarks 71

References 72

5 Monotone Measures-Based Integrals
Erich P. Klement, Radko Mesiar 75

5.1 Preliminaries, Choquet, and Sugeno Integrals 76

5.2 Benvenuti Integral 80

5.3	Universal Integrals	82
5.4	General Integrals Which Are Not Universal	84
5.5	Concluding Remarks, Application Fields.....	86
	References	87
6	The Origin of Fuzzy Extensions	
	<i>Humberto Bustince, Edurne Barrenechea, Javier Fernández,</i> <i>Miguel Pagola, Javier Montero</i>	89
6.1	Considerations Prior to the Concept of Extension of Fuzzy Sets	90
6.2	Origin of the Extensions	93
6.3	Type-2 Fuzzy Sets	94
6.4	Interval-Valued Fuzzy Sets	98
6.5	Atanassov's Intuitionistic Fuzzy Sets or Bipolar Fuzzy Sets of Type 2 or IF Fuzzy Sets	103
6.6	Atanassov's Interval-Valued Intuitionistic Fuzzy Sets	105
6.7	Links Between the Extensions of Fuzzy Sets	106
6.8	Other Types of Sets	106
6.9	Conclusions	108
	References	108
7	F-Transform	
	<i>Irina Perfilieva</i>	113
7.1	Fuzzy Modeling	113
7.2	Fuzzy Partitions	114
7.3	Fuzzy Transform	117
7.4	Discrete F-Transform	119
7.5	F-Transforms of Functions of Two Variables	120
7.6	F^1 -Transform	121
7.7	Applications.....	122
7.8	Conclusions	129
	References	129
8	Fuzzy Linear Programming and Duality	
	<i>Jaroslav Ramík, Milan Vlach</i>	131
8.1	Preliminaries.....	132
8.2	Fuzzy Linear Programming.....	135
8.3	Duality in Fuzzy Linear Programming.....	137
8.4	Conclusion	143
	References	143
9	Basic Solutions of Fuzzy Coalitional Games	
	<i>Tomáš Kroupa, Milan Vlach</i>	145
9.1	Coalitional Games with Transferable Utility	146
9.2	Coalitional Games with Fuzzy Coalitions	150
9.3	Final Remarks.....	155
	References	156

Part B Fuzzy Logic

10	Basics of Fuzzy Sets	
	<i>János C. Fodor, Imre J. Rudas</i>	159
10.1	Classical Mathematics and Logic	160
10.2	Fuzzy Logic, Membership Functions, and Fuzzy Sets	160
10.3	Connectives in Fuzzy Logic	161
10.4	Concluding Remarks	168
	References	168
11	Fuzzy Relations: Past, Present, and Future	
	<i>Susana Montes, Ignacio Montes, Tania Iglesias</i>	171
11.1	Fuzzy Relations	172
11.2	Cut Relations	174
11.3	Fuzzy Binary Relations	174
11.4	Particular Cases of Fuzzy Binary Relations	179
11.5	Present and Future of Fuzzy Relations	180
	References	180
12	Fuzzy Implications: Past, Present, and Future	
	<i>Michał Baczynski, Balasubramaniam Jayaram, Sebastia Massanet, Joan Torrens</i>	183
12.1	Fuzzy Implications: Examples, Properties, and Classes	184
12.2	Current Research on Fuzzy Implications	187
12.3	Fuzzy Implications in Applications	193
12.4	Future of Fuzzy Implications	198
	References	199
13	Fuzzy Rule-Based Systems	
	<i>Luis Magdalena</i>	203
13.1	Components of a Fuzzy Rule Based-System	204
13.2	Types of Fuzzy Rule-Based Systems	209
13.3	Hierarchical Fuzzy Rule-Based Systems	213
13.4	Fuzzy Rule-Based Systems Design	214
13.5	Conclusions	216
	References	217
14	Interpretability of Fuzzy Systems:	
	Current Research Trends and Prospects	
	<i>Jose M. Alonso, Ciro Castiello, Corrado Mencar</i>	219
14.1	The Quest for Interpretability	220
14.2	Interpretability Constraints and Criteria	224
14.3	Interpretability Assessment	227
14.4	Designing Interpretable Fuzzy Systems	229
14.5	Interpretable Fuzzy Systems in the Real World	233
14.6	Future Research Trends on Interpretable Fuzzy Systems	234
14.7	Conclusions	234
	References	235

15 Fuzzy Clustering – Basic Ideas and Overview	
<i>Sadaaki Miyamoto</i>	239
15.1 Fuzzy Clustering	239
15.2 Fuzzy <i>c</i> -Means	239
15.3 Hierarchical Fuzzy Clustering	245
15.4 Conclusion	246
References	247
16 An Algebraic Model of Reasoning to Support Zadeh's CWW	
<i>Enric Trillas</i>	249
16.1 A View on Reasoning	249
16.2 Models	250
16.3 Reasoning	251
16.4 Reasoning and Logic	254
16.5 A Possible Scheme for an Algebraic Model of Commonsense Reasoning	255
16.6 Weak and Strong Deduction: Refutations and Conjectures in a BFA (with a Few Restrictions)	260
16.7 Toward a Classification of Conjectures	262
16.8 Last Remarks	264
16.9 Conclusions	265
References	266
17 Fuzzy Control	
<i>Christian Moewes, Ralf Mikut, Rudolf Kruse</i>	269
17.1 Knowledge-Driven Control	269
17.2 Classical Control Engineering	270
17.3 Using Fuzzy Rules for Control	271
17.4 A Glance at Some Industrial Applications	276
17.5 Automatic Learning of Fuzzy Controllers	279
17.6 Conclusions	281
References	281
18 Interval Type-2 Fuzzy PID Controllers	
<i>Tufan Kumbasar, Hani Hagra</i>	285
18.1 Fuzzy Control Background	285
18.2 The General Fuzzy PID Controller Structure	286
18.3 Simulation Studies	291
18.4 Conclusion	292
References	293
19 Soft Computing in Database and Information Management	
<i>Guy De Tré, Sławomir Zadrozny</i>	295
19.1 Challenges for Modern Information Systems	295
19.2 Some Preliminaries	296
19.3 Soft Computing in Information Modeling	298
19.4 Soft Computing in Querying	302
19.5 Conclusions	309
References	309

20 Application of Fuzzy Techniques to Autonomous Robots	
<i>Ismael Rodríguez Fdez, Manuel Mucientes, Alberto Bugarín Diz</i>	313
20.1 Robotics and Fuzzy Logic	313
20.2 Wall-Following	314
20.3 Navigation	315
20.4 Trajectory Tracking	317
20.5 Moving Target Tracking	318
20.6 Perception	319
20.7 Planning	319
20.8 SLAM	320
20.9 Cooperation	320
20.10 Legged Robots	321
20.11 Exoskeletons and Rehabilitation Robots	322
20.12 Emotional Robots	323
20.13 Fuzzy Modeling	323
20.14 Comments and Conclusions	324
References	325

Part C Rough Sets

21 Foundations of Rough Sets	
<i>Andrzej Skowron, Andrzej Jankowski, Roman W. Swiniarski</i>	331
21.1 Rough Sets: Comments on Development	331
21.2 Vague Concepts	332
21.3 Rough Set Philosophy	333
21.4 Indiscernibility and Approximation	333
21.5 Decision Systems and Decision Rules	336
21.6 Dependencies	337
21.7 Reduction of Attributes	337
21.8 Rough Membership	338
21.9 Discernibility and Boolean Reasoning	339
21.10 Rough Sets and Induction	340
21.11 Rough Set-Based Generalizations	340
21.12 Rough Sets and Logic	343
21.13 Conclusions	347
References	347
22 Rough Set Methodology for Decision Aiding	
<i>Roman Słowiński, Salvatore Greco, Benedetto Matarazzo</i>	349
22.1 Data Inconsistency as a Reason for Using Rough Sets	350
22.2 The Need for Replacing the Indiscernibility Relation by the Dominance Relation when Reasoning About Ordinal Data ..	351
22.3 The Dominance-based Rough Set Approach to Multi-Criteria Classification	353
22.4 The Dominance-based Rough Set Approach to Multi-Criteria Choice and Ranking	361
22.5 Important Extensions of DRSA	366

22.6	DRSA to Operational Research Problems	366
22.7	Concluding Remarks on DRSA Applied to Multi-Criteria Decision Problems.....	367
	References	367
23	Rule Induction from Rough Approximations	
	<i>Jerzy W. Grzymala-Busse</i>	371
23.1	Complete and Consistent Data	371
23.2	Inconsistent Data	375
23.3	Decision Table with Numerical Attributes	377
23.4	Incomplete Data	378
23.5	Conclusions	384
	References	384
24	Probabilistic Rough Sets	
	<i>Yiyu Yao, Salvatore Greco, Roman Słowiński</i>	387
24.1	Motivation for Studying Probabilistic Rough Sets.....	388
24.2	Pawlak Rough Sets	388
24.3	A Basic Model of Probabilistic Rough Sets	390
24.4	Variants of Probabilistic Rough Sets	391
24.5	Three Fundamental Issues of Probabilistic Rough Sets	394
24.6	Dominance-Based Rough Set Approaches	398
24.7	A Basic Model of Dominance-Based Probabilistic Rough Sets	399
24.8	Variants of Probabilistic Dominance-Based Rough Set Approach ...	400
24.9	Three Fundamental Issues of Probabilistic Dominance-Based Rough Sets	403
24.10	Conclusions	409
	References	409
25	Generalized Rough Sets	
	<i>JingTao Yao, Davide Ciucci, Yan Zhang</i>	413
25.1	Definition and Approximations of the Models.....	414
25.2	Theoretical Approaches	420
25.3	Conclusion	422
	References	423
26	Fuzzy-Rough Hybridization	
	<i>Masahiro Inuiguchi, Wei-Zhi Wu, Chris Cornelis, Nele Verbiest</i>	425
26.1	Introduction to Fuzzy-Rough Hybridization	425
26.2	Classification- Versus Approximation-Oriented Fuzzy Rough Set Models	427
26.3	Generalized Fuzzy Belief Structures with Application in Fuzzy Information Systems	437
26.4	Applications of Fuzzy Rough Sets	444
	References	447

Part D **Neural Networks**

27 Artificial Neural Network Models	
<i>Peter Tino, Lubica Benuskova, Alessandro Sperduti</i>	455
27.1 Biological Neurons	455
27.2 Perceptron	456
27.3 Multilayered Feed-Forward ANN Models	458
27.4 Recurrent ANN Models	460
27.5 Radial Basis Function ANN Models	464
27.6 Self-Organizing Maps	465
27.7 Recursive Neural Networks	467
27.8 Conclusion	469
References	470
28 Deep and Modular Neural Networks	
<i>Ke Chen</i>	473
28.1 Overview	473
28.2 Deep Neural Networks	474
28.3 Modular Neural Networks.....	484
28.4 Concluding Remarks	492
References	492
29 Machine Learning	
<i>James T. Kwok, Zhi-Hua Zhou, Lei Xu</i>	495
29.1 Overview	495
29.2 Supervised Learning.....	497
29.3 Unsupervised Learning.....	502
29.4 Reinforcement Learning	510
29.5 Semi-Supervised Learning.....	513
29.6 Ensemble Methods	514
29.7 Feature Selection and Extraction.....	518
References	519
30 Theoretical Methods in Machine Learning	
<i>Badong Chen, Weifeng Liu, José C. Principe</i>	523
30.1 Background Overview	524
30.2 Reproducing Kernel Hilbert Spaces	525
30.3 Online Learning with Kernel Adaptive Filters	527
30.4 Illustration Examples.....	538
30.5 Conclusion	542
References	542
31 Probabilistic Modeling in Machine Learning	
<i>Davide Bacciu, Paulo J.G. Lisboa, Alessandro Sperduti, Thomas Villmann</i> .	545
31.1 Probabilistic and Information-Theoretic Methods.....	545
31.2 Graphical Models	552
31.3 Latent Variable Models.....	560
31.4 Markov Models	565
31.5 Conclusion and Further Reading	572
References	573

32 Kernel Methods	
<i>Marco Signoretto, Johan A. K. Suykens</i>	577
32.1 Background	578
32.2 Foundations of Statistical Learning	580
32.3 Primal–Dual Methods	586
32.4 Gaussian Processes	593
32.5 Model Selection	596
32.6 More on Kernels	597
32.7 Applications.....	600
References	601
33 Neurodynamics	
<i>Robert Kozma, Jun Wang, Zhigang Zeng</i>	607
33.1 Dynamics of Attractor and Analog Networks	607
33.2 Synchrony, Oscillations, and Chaos in Neural Networks	611
33.3 Memristive Neurodynamics	629
33.4 Neurodynamic Optimization.....	634
References	639
34 Computational Neuroscience – Biophysical Modeling of Neural Systems	
<i>Harrison Stratton, Jennie Si</i>	649
34.1 Anatomy and Physiology of the Nervous System	649
34.2 Cells and Signaling Among Cells.....	652
34.3 Modeling Biophysically Realistic Neurons	656
34.4 Reducing Computational Complexity for Large Network Simulations	660
34.5 Conclusions	662
References	662
35 Computational Models of Cognitive and Motor Control	
<i>Ali A. Minai</i>	665
35.1 Overview	665
35.2 Motor Control	667
35.3 Cognitive Control and Working Memory	670
35.4 Conclusion	674
References	674
36 Cognitive Architectures and Agents	
<i>Sebastien Hélie, Ron Sun</i>	683
36.1 Background	683
36.2 Adaptive Control of Thought–Rational (ACT–R)	685
36.3 Soar.....	688
36.4 CLARION.....	690
36.5 Cognitive Architectures as Models of Multi-Agent Interaction	693
36.6 General Discussion	694
References	695

37 Embodied Intelligence	
<i>Angelo Cangelosi, Josh Bongard, Martin H. Fischer, Stefano Nolfi</i>	697
37.1 Introduction to Embodied Intelligence	697
37.2 Morphological Computation for Body–Behavior Coadaptation	698
37.3 Sensory–Motor Coordination in Evolving Robots	701
37.4 Developmental Robotics for Higher Order Embodied Cognitive Capabilities	703
37.5 Conclusion	709
References	711
38 Neuromorphic Engineering	
<i>Giacomo Indiveri</i>	715
38.1 The Origins	715
38.2 Neural and Neuromorphic Computing	716
38.3 The Importance of Fundamental Neuroscience	717
38.4 Temporal Dynamics in Neuromorphic Architectures	718
38.5 Synapse and Neuron Circuits	719
38.6 Spike–Based Multichip Neuromorphic Systems	721
38.7 State–Dependent Computation in Neuromorphic Systems	722
38.8 Conclusions	722
References	723
39 Neuroengineering	
<i>Damien Coyle, Ronen Sosnik</i>	727
39.1 Overview – Neuroengineering in General	728
39.2 Human Motor Control	732
39.3 Modeling the Motor System – Internal Motor Models	733
39.4 Sensorimotor Learning	736
39.5 MRI and the Motor System – Structure and Function	738
39.6 Electrocorticographic Motor Cortical Surface Potentials	741
39.7 MEG and EEG – Extra Cerebral Magnetic and Electric Fields of the Motor System	745
39.8 Extracellular Recording – Decoding Hand Movements from Spikes and Local Field Potential	748
39.9 Translating Brainwaves into Control Signals – BCIs	754
39.10 Conclusion	762
References	764
40 Evolving Connectionist Systems: From Neuro–Fuzzy–, to Spiking– and Neuro–Genetic	
<i>Nikola Kasabov</i>	771
40.1 Principles of Evolving Connectionist Systems (ECOS)	771
40.2 Hybrid Systems and Evolving Neuro–Fuzzy Systems	772
40.3 Evolving Spiking Neural Networks (eSNN)	775
40.4 Computational Neuro–Genetic Modeling (CNGM)	778
40.5 Conclusions and Further Directions	779
References	780

41 Machine Learning Applications	
<i>Piero P. Bonissone</i>	783
41.1 Motivation	784
41.2 Machine Learning (ML) Functions	786
41.3 CI/ML Applications in Industrial Domains: Prognostics and Health Management (PHM)	787
41.4 CI/ML Applications in Financial Domains: Risk Management	797
41.5 Model Ensembles and Fusion	807
41.6 Summary and Future Research Challenges	812
References	817

Part E Evolutionary Computation

42 Genetic Algorithms	
<i>Jonathan E. Rowe</i>	825
42.1 Algorithmic Framework	826
42.2 Selection Methods	828
42.3 Replacement Methods	831
42.4 Mutation Methods	832
42.5 Selection–Mutation Balance	834
42.6 Crossover Methods	836
42.7 Population Diversity	838
42.8 Parallel Genetic Algorithms	839
42.9 Populations as Solutions	841
42.10 Conclusions	842
References	843

43 Genetic Programming	
<i>James McDermott, Una-May O'Reilly</i>	845
43.1 Evolutionary Search for Executable Programs	845
43.2 History	846
43.3 Taxonomy of AI and GP	848
43.4 Uses of GP	853
43.5 Research Topics	857
43.6 Practicalities	861
References	862

44 Evolution Strategies	
<i>Nikolaus Hansen, Dirk V. Arnold, Anne Auger</i>	871
44.1 Overview	871
44.2 Main Principles	873
44.3 Parameter Control	877
44.4 Theory	886
References	895

45 Estimation of Distribution Algorithms	
<i>Martin Pelikan, Mark W. Hauschild, Fernando G. Lobo</i>	899
45.1 Basic EDA Procedure	900

45.2	Taxonomy of EDA Models	903
45.3	Overview of EDAs	908
45.4	EDA Theory	916
45.5	Efficiency Enhancement Techniques for EDAs	917
45.6	Starting Points for Obtaining Additional Information	920
45.7	Summary and Conclusions.....	921
	References	921
46	Parallel Evolutionary Algorithms	
	<i>Dirk Sudholt</i>	929
46.1	Parallel Models	931
46.2	Effects of Parallelization	935
46.3	On the Spread of Information in Parallel EAs	938
46.4	Examples Where Parallel EAs Excel	943
46.5	Speedups by Parallelization	949
46.6	Conclusions	956
	References	957
47	Learning Classifier Systems	
	<i>Martin V. Butz</i>	961
47.1	Background	962
47.2	XCS	965
47.3	XCSF.....	970
47.4	Data Mining.....	972
47.5	Behavioral Learning.....	973
47.6	Conclusions	977
47.7	Books and Source Code	978
	References	979
48	Indicator-Based Selection	
	<i>Lothar Thiele</i>	983
48.1	Motivation	983
48.2	Basic Concepts	984
48.3	Selection Schemes.....	987
48.4	Preference-Based Selection	990
48.5	Concluding Remarks	992
	References	993
49	Multi-Objective Evolutionary Algorithms
