Series Editors' Preface *XIII*

Preface *XV*

Notations *XVII*

1	Introduction	<i>1</i>
2	Mechanical and Fracture Properties of Solids	<i>7</i>
2.1	Mechanical Response in Materials	<i>8</i>
2.1.1	Elastic and Plastic Regions	<i>8</i>
2.1.2	Linear Elastic Region	<i>9</i>
2.1.3	Nonlinear Plastic Region	<i>10</i>
2.2	Ductile, Quasi-brittle, and Brittle Materials	<i>11</i>
2.3	Ductile and Brittle Fracture	<i>11</i>
2.3.1	Macroscopic Features of Ductile and Brittle Fractures	<i>12</i>
2.3.2	Microscopic Features of Ductile and Brittle Fractures	<i>14</i>
3	Crystal Defects and Disorder in Lattice Models	<i>17</i>
3.1	Point Defects	<i>17</i>
3.2	Line Defects	<i>18</i>
3.3	Planar Defects	<i>20</i>
3.4	Lattice Defects: Percolation Theory	<i>22</i>
3.5	Summary	<i>25</i>
4	Nucleation and Extreme Statistics in Brittle Fracture	<i>27</i>
4.1	Stress Concentration Around Defect	<i>27</i>
4.1.1	Griffith's Theory of Crack Nucleation in Brittle Fracture	<i>30</i>
4.2	Strength of Brittle Solids: Extreme Statistics	<i>32</i>
4.2.1	Weibull and Gumbel Statistics	<i>32</i>
4.3	Extreme Statistics in Fiber Bundle Models of Brittle Fracture	<i>34</i>
4.3.1	Fiber Bundle Model	<i>34</i>
4.3.1.1	Strength of the Local Load Sharing Fiber Bundles	<i>35</i>
4.3.1.2	Crossover from Extreme to Self-averaging Statistics in the Model	<i>35</i>

4.4	Extreme Statistics in Percolating Lattice Model of Brittle Fracture	37
4.5	Molecular Dynamics Simulation of Brittle Fracture	39
4.5.1	Comparisons with Griffith's Theory	39
4.5.2	Simulation of Highly Disordered Solids	41
4.6	Summary	42
5	Roughness of Fracture Surfaces	45
5.1	Roughness Properties in Fracture	45
5.1.1	Self-affine Scaling of Fractured Surfaces	46
5.1.2	Out-of-plane Fracture Roughness	47
5.1.3	Distribution of Roughness: Mono- and Multi-affinity	49
5.1.3.1	Nonuniversal Cases	50
5.1.3.2	Anisotropic Scaling	54
5.1.4	In-plane Roughness of Fracture Surfaces	56
5.1.4.1	Waiting Time Distributions in Crack Propagation	60
5.1.5	Effect of Probe Size	62
5.1.6	Effect of Spatial Correlation and Anisotropy	65
5.2	Molecular Dynamics Simulation of Fractured Surface	66
5.3	Summary	68
6	Avalanche Dynamics in Fracture	69
6.1	Probing Failure with Acoustic Emissions	70
6.2	Dynamics of Fiber Bundle Model	74
6.2.1	Dynamics Around Critical Load	77
6.2.2	Dynamics at Critical Load	81
6.2.3	Avalanche Statistics of Energy Emission	81
6.2.4	Precursors of Global Failure in the Model	82
6.2.5	Burst Distribution: Crossover Behavior	84
6.2.6	Abrupt Rupture and Tricritical Point	85
6.2.7	Disorder in Elastic Modulus	87
6.3	Interpolations of Global and Local Load Sharing Fiber Bundle Models	88
6.3.1	Power-law Load Sharing	89
6.3.2	Mixed-mode Load Sharing	90
6.3.3	Heterogeneous Load Sharing	92
6.3.3.1	Dependence on Loading Process	93
6.3.3.2	Results in One Dimension	94
6.3.3.3	Results in Two Dimensions	96
6.3.3.4	Comparison with Mixed Load Sharing Model	101
6.4	Random Threshold Spring Model	101
6.5	Summary	107
7	Subcritical Failure of Heterogeneous Materials	111
7.1	Time of Failure Due to Creep	111

7.1.1	Fluctuating Load	112
7.1.2	Failure Due to Fatigue in Fiber Bundles	119
7.1.3	Creep Rupture Propagation in Rheological Fiber Bundles	122
7.1.3.1	Modification for Local Load Sharing Scheme	126
7.2	Dynamics of Strain Rate	129
7.3	Summary	134
8	Dynamics of Fracture Front	135
8.1	Driven Fluctuating Line	135
8.1.1	Variation of Universality Class	140
8.1.2	Depinning with Constant Volume	142
8.1.3	Infinite-range Elastic Force with Local Fluctuations	144
8.2	Fracture Front Propagation in Fiber Bundle Models	146
8.2.1	Interfacial Crack Growth in Fiber Bundle Model	146
8.2.2	Crack Front Propagation in Fiber Bundle Models	149
8.2.3	Self-organized Dynamics in Fiber Bundle Model	151
8.3	Hydraulic Fracture	161
8.4	Summary	163
9	Dislocation Dynamics and Ductile Fracture	165
9.1	Nonlinearity in Materials	165
9.2	Deformation by Slip	165
9.2.1	Critical Stress to Create Slip in Perfect Lattice	166
9.3	Slip by Dislocation Motion	167
9.4	Plastic Strain due to Dislocation Motion	169
9.5	When Does a Dislocation Move?	170
9.5.1	Dislocation Width	170
9.5.2	Dependence on Grain Boundaries in Crystals	171
9.5.3	Role of Temperature	171
9.5.4	Effect of Applied Stress	172
9.6	Ductile–Brittle Transition	172
9.6.1	Role of Confining Pressure	172
9.6.2	Role of Temperature	173
9.7	Theoretical Work on Ductile–Brittle Transition	174
10	Electrical Breakdown Analogy of Fracture	177
10.1	Disordered Fuse Network	178
10.1.1	Dilute Limit ($p \rightarrow 1$)	179
10.1.2	Critical Behavior ($p \rightarrow p_c$)	180
10.1.3	Influence of the Sample Size	181
10.1.4	Distribution of the Failure Current	182
10.1.4.1	Dilute Limit ($p \rightarrow 1$)	182
10.1.4.2	At Critical Region ($p \rightarrow p_c$)	183
10.1.5	Continuum Model	183
10.1.6	Electromigration	184

10.2	Numerical Simulations of Random Fuse Network	185
10.2.1	Disorders in Failure Thresholds	187
10.2.2	Avalanche Size Distribution	188
10.2.3	Roughness of Fracture Surfaces in RFM	191
10.2.4	Effect of High Disorder	193
10.2.5	Size Effect	196
10.3	Dielectric Breakdown Problem	197
10.3.1	Dilute Limit ($p \rightarrow 1$)	198
10.3.2	Close to Critical Point ($p \rightarrow p_c$)	199
10.3.3	Influence of Sample Size	199
10.3.4	Distribution of Breakdown Field	200
10.3.5	Continuum Model	200
10.3.6	Shortest Path	201
10.3.7	Numerical Simulations in Dielectric Breakdown	201
10.3.7.1	Stochastic Models	201
10.3.7.2	Deterministic Models	202
10.4	Summary	205
11	Earthquake as Failure Dynamics	207
11.1	Earthquake Statistics: Empirical Laws	207
11.1.1	Universal Scaling Laws	209
11.2	Spring-block Models of Earthquakes	214
11.2.1	Computer Simulation of the Burridge–Knopoff Model	215
11.2.2	Train Model of Earthquake	219
11.2.3	Mapping of Train Model to Sandpile	221
11.2.3.1	Mapping to Sandpile Model	222
11.2.4	Two-fractal Overlap Models	223
11.2.4.1	Model Description	224
11.2.4.2	GR and Omori Laws	225
11.3	Cellular Automata Models of Earthquakes	227
11.3.1	Bak Tang Wiesenfeld (BTW) Model	228
11.3.2	Zhang Model	232
11.3.3	Manna Model	234
11.3.4	Common Failure Precursor for BTW and Manna Models and FBM	237
11.3.4.1	Precursor in BTW Model	238
11.3.4.2	Precursor in Manna Model	240
11.3.4.3	Precursor in Fiber Bundle Model	240
11.3.5	Olami–Feder–Christensen (OFC) Model	240
11.3.5.1	Moving Boundary	242
11.4	Equivalence of Interface and Train Models	246
11.4.1	Model	248
11.4.2	Avalanche Statistics in Modified Train Model	250
11.4.3	Equivalence with Interface Depinning	253

11.4.4	Interface Propagation and Fluctuation in Bulk	255
11.5	Summary	261
12	Overview and Outlook	265
A	Percolation	269
A.1	Critical Exponent: General Examples	269
A.1.1	Scaling Behavior	270
A.2	Percolation Transition	270
A.2.1	Critical Exponents of Percolation Transition	272
A.2.2	Scaling Theory of Percolation Transition	273
A.3	Renormalization Group (RG) Scheme	274
A.3.1	RG for Site Percolation in One Dimension	276
A.3.2	RG for Site Percolation in Two-dimensional Triangular Lattice	278
A.3.3	RG for Bond Percolation in Two-dimensional Square Lattice	279
B	Real-space RG for Rigidity Percolation	281
C	Fiber Bundle Model	285
C.1	Universality Class of the Model	285
C.1.1	Linearly Increasing Density of Fiber Strength	285
C.1.2	Linearly Decreasing Density of Fiber Strength	286
C.1.3	Nonlinear Stress–Strain Relationship	288
C.2	Brittle to Quasi-brittle Transition and Tricritical Point	290
C.2.1	Abrupt Failure and Tricritical Point	292
D	Quantum Breakdown	293
E	Fractals	295
F	Two-fractal Overlap Model	297
F.1	Renormalization Group Study: Continuum Limit	297
F.2	Discrete Limit	299
F.2.1	Gutenberg-Richter Law	299
F.2.2	Omori Law	300
G	Microscopic Theories of Friction	303
G.1	Frenkel-Kontorova Model	303
G.2	Two-chain Model	304
G.2.1	Effect of Fractal Disorder	305
	References	309
	Index	323
