1	Introduction	1
1.1	Introduction	1
1.2	Teleoperation Applications	5
1.3	Control Issues in Teleoperation	13
1.3.1	Supervisory Control	16
1.3.2	Passivity-Based Control	16
1.3.3	Robust Control	17
1.3.4	Frequencial Methods	17
1.3.5	Predictive Control	18
1.3.6	Sliding Mode Control	18
1.3.7	Adaptive Control	19
1.3.8	Teleoperation over the Internet	21
1.4	Outline of the Book	22
2	Mathematical Preliminaries	25
2.1	Introduction	25
2.2	Linear Algebra	25
2.2.1	Linear Subspaces	25
2.2.2	Eigenvalues and Eigenvectors	27
2.2.3	Vector Norms and Matrix Norms	28
2.2.4	Similarity Transformation	29
2.2.5	Singular Value Decomposition	30
2.3	Controllability and Observability	32
2.3.1	Controllability	32
2.3.2	Observability	33
2.4	Stability Theory	35
2.4.1	Definitions	35
2.4.2	Lemmas and Theorems	36
2.4.3	Input-to-State Stability	38
2.4.4	Lyapunov's Direct Method	39

2.4.5	Barbalat-Like Lemmas	41
2.4.6	Lyapunov Theorem	42
2.5	Linear Matrix Inequalities	44
2.6	Stochastic Systems	46
2.6.1	Probability Preliminaries	46
2.6.2	Continuous-Time Markov Chains	46
2.6.3	Stochastic Stability	48
2.7	Time-Delay Systems	51
2.7.1	Functional Differential Equations	52
2.7.2	Stability of Time-Delay Systems	53
2.7.3	Notes	56
3	Modeling of Teleoperation System	57
3.1	Introduction	57
3.2	Kinematics	57
3.2.1	Direct Kinematic Model	57
3.2.2	Inverse Kinematic Model	63
3.2.3	Differential Kinematics	65
3.2.4	Statics, Singularities, and Inverse Differential Kinematics	68
3.3	Dynamics	72
3.4	Modeling of Time Delays	88
3.4.1	Networks	88
3.4.2	Network-Induced Delays	89
3.4.3	Network Modeled as Constant Delay	91
3.4.4	Network Modeled as Delays Being Independent	91
3.4.5	Network Modeled Using Markov Chain	92
3.4.6	Notations and Constraints for Delay Variations	93
3.5	Conclusion	94
4	Model-Based Bilateral Teleoperation Control	95
4.1	Introduction	95
4.2	Rigid Joint Robotic Systems	97
4.2.1	Dynamics Description	97
4.2.2	Motion-Based Control of Rigid Joint Teleoperation System	98
4.2.3	Stability Analysis	102
4.2.4	Simulation Studies	107
4.3	Flexible Joint Robotic Systems	113
4.3.1	Dynamics Description	113
4.3.2	Control Design and Stability Analysis	114
4.3.3	Simulation Studies	118
4.4	Conclusions	122

5 Model Reference Bilateral Teleoperation Control	123
5.1 Introduction	123
5.2 Hybrid Position/Force Teleoperation in Joint Space	125
5.2.1 Dynamics Description	125
5.2.2 Hybrid Position/Force Coordination of Master–Slave Teleoperation	128
5.2.3 Position/Force Control Design	131
5.2.4 Stability Analysis	135
5.2.5 *Simulation Studies	145
5.3 Task-Space Hybrid Motion/Force Control of Bilateral Teleoperation	150
5.3.1 Dynamics Description	150
5.3.2 Task-Space Motion Synchronization	152
5.3.3 Task-Space Force Synchronization	160
5.3.4 Simulation Studies	160
5.4 Conclusions	164
6 Single-Master-Multi-Slaves Teleoperation	167
6.1 Introduction	167
6.2 System Description and Assumptions	169
6.3 Dynamics of Teleoperation System	171
6.3.1 Master Dynamics	173
6.3.2 Slave Dynamics	174
6.4 Neural Network Approximation	178
6.5 Hybrid Motion/Force Coordination of Master-Slave Teleoperation	180
6.6 The Neural Network Control and Its Stability Analysis	182
6.6.1 X_2 Subsystem	182
6.6.2 X_1 Subsystem	187
6.7 Internal Force Control Design and Stability	190
6.8 Simulation Studies	191
6.9 Conclusion	198
7 Trilateral Teleoperation	199
7.1 Introduction	199
7.2 Dynamics Description	200
7.2.1 Slave Dynamics	201
7.2.2 Master Dynamics	202
7.3 Control Objective	203
7.4 Fuzzy Logic Systems Functional Universal Approximation	204
7.5 Trilateral Teleoperation Control and Stability	205
7.5.1 Motion Coordination of Master 1 and Slave Robot	205
7.5.2 Stability Analysis	208
7.5.3 Force Reflection of Master 2 and Slave Robot	219

7.6	Simulation Studies	220
7.7	Conclusions.	226
8	Multilateral Cooperative Teleoperation	227
8.1	Introduction.	227
8.2	System Description and Assumptions	230
8.3	Dynamics of Multilateral Teleoperation System	231
8.3.1	Reduced Slave Dynamics	232
8.3.2	Reduced Master Dynamics	233
8.4	Control Objective	234
8.5	Fuzzy Logic System	235
8.6	Hybrid Motion/Force Multilateral Teleoperation Control	237
8.6.1	X_2 Subsystem Stability	239
8.6.2	X_1 Subsystem Stability	247
8.6.3	Force Control Design and Stability.	253
8.7	Simulation Studies	254
8.8	Conclusions.	262
