Volume 1

Part I Background and Outline – Principles and Fundamentals

- 1 Biorefinery Systems – An Overview** 3
Birgit Kamm, Michael Kamm, Patrick R. Gruber, and Stefan Kromus
- 1.1 Introduction 3
- 1.2 Historical Outline 4
 - 1.2.1 Historical Technological Outline and Industrial Resources 4
 - 1.2.2 The Beginning – A Digest 5
 - 1.2.2.1 Sugar Production 5
 - 1.2.2.2 Starch Hydrolysis 5
 - 1.2.2.3 Wood Saccharification 5
 - 1.2.2.4 Furfural 6
 - 1.2.2.5 Cellulose and Pulp 6
 - 1.2.2.6 Levulinic Acid 6
 - 1.2.2.7 Lipids 7
 - 1.2.2.8 Vanillin from Lignin 7
 - 1.2.2.9 Lactic Acid 7
 - 1.2.3 The Origins of Integrated Biobased Production 8
- 1.3 Situation 11

1.3.1	Some Current Aspects of Biorefinery Research and Development	11
1.3.2	Raw Material Biomass	12
1.3.3	National Vision and Goals and Plan for Biomass Technology in the United States	14
1.3.4	Vision and Goals and Plan for Biomass Technology in the European Union and Germany	15
1.4	Principles of Biorefineries	16
1.4.1	Fundamentals	16
1.4.2	Definition of the Term “Biorefinery”	19
1.4.3	The Role of Biotechnology	20
1.4.3.1	Guidelines of Fermentation Section within Glucose-product Family Tree	21
1.4.4	Building Blocks, Chemicals and Potential Screening	22
1.5	Biorefinery Systems and Design	23
1.5.1	Introduction	23
1.5.2	Lignocellulosic Feedstock Biorefinery	24
1.5.3	Whole-crop Biorefinery	26
1.5.4	Green Biorefinery	29
1.5.5	Two-platform Concept and Syngas	31
1.6	Outlook and Perspectives	32
	References	33
2	Biomass Refining Global Impact – The Biobased Economy of the 21st Century	41
	<i>Bruce E. Dale and Seungdo Kim</i>	
2.1	Introduction	41
2.2	Historical Outline	42
2.2.1	Background and Development of the Fossil Carbon-processing Industries	42
2.2.2	The Existing Biobased Economy: Renewable Carbon	43
2.2.3	Toward a Much Larger Biobased Economy	44
2.3	Supplying the Biorefinery	45
2.3.1	What Raw Materials do Biorefineries Require and What Products Can They Make?	45
2.3.2	Comparing Biomass Feedstock Costs With Petroleum Costs	48
2.3.3	How Much Biomass Feedstock Can be Provided at What Cost?	50
2.4	How Will Biorefineries Develop Technologically?	53
2.4.1	Product Yield: The Dominant Technoeconomic Factor	53
2.4.2	Product Diversification: Using the Whole Barrel of Biomass	54
2.4.3	Process Development and a Technical Prerequisite for Cellulosic Biorefineries	55
2.5	Sustainability of Integrated Biorefining Systems	56
2.5.1	Integrated Biorefining Systems: “All Biomass is Local”	56

2.5.2	Agricultural/Forestry Ecosystem Modeling: New Tools for an Age of Sustainability	57
2.5.3	Analyzing the Sustainability of Integrated Biorefining Systems: Some Results	60
2.6	Conclusions	64
	Acknowledgements	65
	References	65
3	Development of Biorefineries – Technical and Economic Considerations	67
	<i>Bill Dean, Tim Dodge, Fernando Valle, and Gopal Chotani</i>	
3.1	Introduction	67
3.2	Overview: The Biorefinery Model	68
3.3	Feedstock and Conversion to Fermentable Sugar	68
3.3.1	Sucrose	70
3.3.2	Starch	70
3.3.3	Cellulose	71
3.4	Technical Challenges	74
3.4.1	Cellulase Enzymes	74
3.4.1.1	Improved Cellulase Production Economics	74
3.4.1.2	Improved Cellulase Enzyme Performance	76
3.4.2	Fermentation Organisms	77
3.4.2.1	Biomass Hydrolyzate as Fermentable Carbon Source	78
3.4.2.2	Production Process as a Whole	79
3.4.2.3	Emerging Solutions	80
3.5	Conclusions	81
	Acknowledgments	82
	References	82
4	Biorefineries for the Chemical Industry – A Dutch Point of View	85
	<i>Ed de Jong, René van Ree Rea, Robert van Tuil, and Wolter Elbersen</i>	
4.1	Introduction	85
4.2	Historical Outline – The Chemical Industry: Current Situation and Perspectives	86
4.2.1	Overview of Products and Markets	86
4.2.2	Technological Pathways	87
4.2.3	Biomass-based Industrial Products	87
4.2.3.1	Carbohydrates	89
4.2.3.2	Fatty Acids	90
4.2.3.3	Other	91
4.2.4	International Perspectives	92
4.2.4.1	Production	92
4.2.4.2	Integration	92
4.2.4.3	Use and Re-use	93

4.3	Biomass: Technology and Sustainability	93
4.3.1	Transition to a Bio-based Industry: Sectoral Integration in the Netherlands	93
4.3.2	Can Sustainability Drive Technology?	96
4.4	The Chemical Industry: Biomass Opportunities – Biorefineries	97
4.4.1	Biomass Opportunities	97
4.4.2	Biorefinery Concept	98
4.4.3	Biomass Availability	100
4.4.4	Primary Refinery	101
4.4.5	Secondary Thermochemical Refinery	102
4.4.6	Secondary Biochemical Refinery – Fermentative Processes	104
4.4.6.1	Feedstocks	105
4.4.6.2	Product Spectrum	105
4.4.6.3	Side Streams and Recycling	106
4.5	Conclusions, Outlook, and Perspectives	106
4.5.1	Biomass – Sustainability	106
4.5.2	Biomass Refining and Pretreatment	107
4.5.3	Conversion Technology	108
4.5.4	Chemicals and Materials Design	108
4.5.5	Dutch Energy Research Strategy (“EOS”)	109
	References	109

Part II **Biorefinery Systems**

Lignocellulose Feedstock Biorefinery

5	The Lignocellulosic Biorefinery – A Strategy for Returning to a Sustainable Source of Fuels and Industrial Organic Chemicals	115
	<i>L. Davis Clements and Donald L. Van Dyne</i>	
5.1	The Situation	115
5.2	The Strategy	115
5.2.1	A Strategy Within a Strategy	116
5.2.2	Environmental Benefits	117
5.2.3	The Business Structure	117
5.2.4	Cost Estimates	118
5.3	Comparison of Petroleum and Biomass Chemistry	118
5.3.1	Petroleum Resources	118
5.3.2	Biomass Resources	119
5.3.3	Saccharides and Polysaccharides	121
5.3.4	Lignin	121
5.3.5	Triacylglycerides (or Triglycerides)	121
5.3.6	Proteins	122
5.4	The Chemistry of the Lignocellulosic Biorefinery	122
5.5	Examples of Integrated Biorefinery Applications	125

5.5.1	Production of Ethanol and Furfural from Lignocellulosic Feedstocks	125
5.5.2	Management of Municipal Solid Waste	125
5.5.3	Coupling MSW Management, Ethanol, and Biodiesel	126
5.6	Summary	127
	References	127
6	Lignocellulosic Feedstock Biorefinery:	
	History and Plant Development for Biomass Hydrolysis	129
	<i>Raphael Katzen and Daniel J. Schell</i>	
6.1	Introduction	129
6.2	Hydrolysis of Biomass Materials	129
6.2.1	Acid Conversion	129
6.2.2	Enzymatic Conversion	130
6.3	Acid Hydrolysis Processes	130
6.3.1	Early Efforts to Produce Ethanol	130
6.3.2	Other Products	133
6.4	Enzymatic Hydrolysis Process	134
6.4.1	Early History	134
6.4.2	Enzyme-Based Plant Development	134
6.4.3	Technology Development	135
6.5	Conclusion	136
	References	136
7	The Biofine Process – Production of Levulinic Acid, Furfural, and Formic Acid from Lignocellulosic Feedstocks	139
	<i>Daniel J. Hayes, Steve Fitzpatrick, Michael H. B. Hayes, and Julian R. H. Ross</i>	
7.1	Introduction	139
7.2	Lignocellulosic Fractionation	139
7.2.1	Acid Hydrolysis of Polysaccharides	141
7.2.2	Production of Levulinic Acid, Formic Acid and Furfural	142
7.3	The Biofine Process	144
7.3.1	Yields and Efficiencies of the Biofine Process	145
7.3.2	Advantages over Conventional Lignocellulosic Technology	146
7.3.3	Products of The Biofine Process	147
7.3.3.1	Diphenolic Acid	148
7.3.3.2	Succinic Acid and Derivatives	149
7.3.3.3	Delta-aminolevulinic Acid	149
7.3.3.4	Methyltetrahydrofuran	150
7.3.3.5	Ethyl Levulinate	152
7.3.3.6	Formic Acid	153
7.3.3.7	Furfural	154
7.3.4	Biofine Char	155
7.3.5	Economics of The Biofine Process	158

7.4	Conclusion	161
	References	162

Whole Crop Biorefinery

8	A Whole Crop Biorefinery System: A Closed System for the Manufacture of Non-food Products from Cereals	165
	<i>Apostolis A. Koutinas, Rouhang Wang, Grant M. Campbell, and Colin Webb</i>	
8.1	Intro	165
8.2	Biorefineries Based on Wheat	167
8.2.1	Wheat Structure and Composition	167
8.2.2	Secondary Processing of Wheat Flour Milling Byproducts	169
8.2.3	Advanced Wheat Separation Processes for Food and Non-food Applications	173
8.2.3.1	Pearling as an Advanced Cereal Fractionation Technology	173
8.2.3.2	Air Classification	176
8.2.4	Biorefinery Based on Novel Dry Fractionation Processes of Wheat	176
8.2.4.1	Potential Value-added Byproducts from Wheat Bran-rich Fractions	178
8.2.4.2	Exploitation of the Pearled Wheat Kernel	180
8.3	A Biorefinery Based on Oats	183
8.3.1	Oat Structure and Composition	183
8.3.2	Layout of a Potential Oat-based Fractionation Process	183
8.3.2.1	Potential Value-added Byproducts from Oat Bran-rich Fractions	185
8.4	Summary	187
	References	187

Fuel-oriented Biorefineries

9	Jogen's Demonstration Process for Producing Ethanol from Cellulosic Biomass	193
	<i>Jeffrey S. Tolan</i>	
9.1	Introduction	193
9.2	Process Overview	193
9.3	Feedstock Selection	194
9.3.1	Feedstock Composition	194
9.3.2	Feedstock Selection	196
9.3.3	Ethanol from Starch or Sucrose	197
9.3.4	Advantages of Making Ethanol from Cellulosic Biomass	197
9.4	Pretreatment	198
9.4.1	Process	198
9.4.2	Chemical Reactions	198
9.4.3	Other Pretreatment Processes	199

9.5	Cellulase Enzyme Production	201
9.5.1	Production of Cellulase Enzymes	201
9.5.2	Enzyme Production on the Ethanol Plant Site	202
9.5.3	Commercial Status of Cellulase	202
9.6	Cellulose Hydrolysis	202
9.6.1	Process Description	202
9.6.2	Kinetics of Cellulose Hydrolysis	203
9.6.3	Improvements in Enzymatic Hydrolysis	205
9.7	Lignin Processing	205
9.7.1	Process Description	205
9.7.2	Alternative Uses for Lignin	206
9.8	Sugar Fermentation and Ethanol Recovery	206
	References	207
10	Sugar-based Biorefinery – Technology for Integrated Production of Poly(3-hydroxybutyrate), Sugar, and Ethanol	209
	<i>Carlos Eduardo Vaz Rossell, Paulo E. Mantelatto, José A. M. Agnelli, and Jefter Nascimento</i>	
10.1	Introduction	209
10.2	Sugar Cane Agro Industry in Brazil – Historical Outline	209
10.2.1	Sugar and Ethanol Production	209
10.2.2	The Sugar Cane Agroindustry and the Green Cycle	210
10.3	Biodegradable Plastics from Sugar Cane	212
10.3.1	Poly(3-Hydroxybutyric Acid)	212
10.3.1.1	Biodegradable Plastics and the Environment	212
10.3.1.2	General Aspects of Biodegradability	213
10.3.2	Poly(3-Hydroxybutyric Acid) Polymer	214
10.3.2.1	General Characteristics of Poly(3-hydroxybutyric Acid) and its Copolymer Poly(3-hydroxybutyric Acid-co-3- hydroxyvaleric Acid)	214
10.3.2.2	Processing of Poly(Hydroxybutyrates)	215
10.4	Poly(3-Hydroxybutyric Acid) Production Process	217
10.4.1	Sugar Fermentation to Poly(3-Hydroxybutyric Acid) by <i>Ralstonia eutropha</i>	217
10.4.2	Downstream Processing for Recovery and Purification of Intracellular Poly(3-Hydroxybutyric Acid)	218
10.4.2.1	Processes for Extraction and Purification of Poly(hydroxyalkanoates)	218
10.4.2.2	Chemical Digestion	218
10.4.2.3	Enzymatic Digestion	219
10.4.2.4	Solvent Extraction	219
10.4.3	Integration of Poly(3-Hydroxybutyric Acid) Production in a Sugar Mill	221

- 10.4.4 Investment and Production Cost of Poly(3-Hydroxybutyric Acid) in a Sugar Mill 222
- 10.5 Outlook and Perspectives 223
- References 225

Biorefineries Based on Thermochemical Processing

- 11 **Biomass Refineries Based on Hybrid Thermochemical-Biological Processing – An Overview** 227
Robert C. Brown
 - 11.1 Introduction 227
 - 11.2 Historical Outline 228
 - 11.2.1 Origins of Biorefineries Based on Syngas Fermentation 228
 - 11.2.2 Origins of Biorefineries Based on Fermentation of Bio-oils 229
 - 11.3 Gasification-Based Systems 230
 - 11.3.1 Fundamentals of Gasification 230
 - 11.3.2 Fermentation of Syngas 233
 - 11.3.2.1 Production of Organic Acids 234
 - 11.3.2.2 Production of Alcohols 235
 - 11.3.2.3 Production of Polyesters 236
 - 11.3.3 Biorefinery Based on Syngas Fermentation 239
 - 11.3.4 Enabling Technology 240
 - 11.4 Fast Pyrolysis-based Systems 241
 - 11.4.1 Fundamentals of Fast Pyrolysis 241
 - 11.4.2 Fermentation of Bio-oils 244
 - 11.4.3 Biorefineries Based on Fast Pyrolysis 246
 - 11.4.4 Enabling Technologies 248
 - 11.5 Outlook and Perspectives 249
 - References 250

Green Biorefineries

- 12 **The Green Biorefiner Concept – Fundamentals and Potential** 253
Stefan Kromus, Birgit Kamm, Michael Kamm, Paul Fowler, and Michael Narodoslawsky
 - 12.1 Introduction 253
 - 12.2 Historical Outline 254
 - 12.2.1 The Inceptions 254
 - 12.2.2 First Production of Leaf Protein Concentrate 254
 - 12.2.3 First Production of Leaf Dyes 257
 - 12.3 Green Biorefinery Raw Materials 258
 - 12.3.1 Raw Materials 258
 - 12.3.2 Availability of Grassland Feedstocks for Large-scale Green Biorefineries 259
 - 12.3.3 Key Components of Green and Forage Grasses 260

12.3.3.1	Structural Cell Wall Constituents	260
12.3.3.2	Cell Contents	265
12.4	Green Biorefinery Concept	269
12.4.1	Fundamentals and Status Quo	269
12.4.2	Wet Fractionation and Primary Refinery	271
12.5	Processes and Products	273
12.5.1	The Juice Fraction	273
12.5.1.1	Green Juice	273
12.5.2	GJ Drinks/Alternative Life	275
12.5.2.1	Silage Juice	276
12.5.3	Ingredients and Specialties	277
12.5.3.1	Proteins/Polysaccharides	277
12.5.3.2	Cholesterol Mediation	277
12.5.3.3	Antifeedants	277
12.5.3.4	Silica	277
12.5.3.5	Silicon Carbide	278
12.5.3.6	Filter Aids	278
12.5.3.7	Zeolites	278
12.5.4	The Press-Cake (Fiber) Fraction	278
12.5.4.1	Fibers	280
12.5.4.2	Chemicals	282
12.5.4.3	Residue Utilization	283
12.6	Green Biorefinery – Economic and Ecological Aspects	283
12.7	Outlook and Perspectives	285
	Acknowledgment	285
	References	285

13 Plant Juice in the Biorefinery –

Use of Plant Juice as Fermentation Medium 295

Margrethe Andersen, Pauli Kiel, and Mette Hedegaard Thomsen

13.1	Introduction	295
13.2	Historical Outline	295
13.3	Biobased Poly(lactic Acid)	296
13.3.1	Fermentation Processes	296
13.3.2	The Green Biorefinery	296
13.3.3	Lactic Acid Fermentation	298
13.3.4	Brown Juice as a Fermentation Medium	298
13.4	Materials and Methods	299
13.4.1	Analytical Methods	299
13.4.1.1	Sugar Analysis	299
13.4.1.2	Analysis of Organic Acids	299
13.4.1.3	Analysis of Minerals	299
13.4.1.4	Analysis of Vitamins	299
13.4.1.5	Analysis of Amino Acids	299
13.4.1.6	Analysis of Protein	299

13.4.2	Fed Batch Fermentation of Brown Juice with <i>Lb. salivarius</i> BC 1001	299
13.4.3	Pilot Scale Continuous Fermentation with <i>Lb. salivarius</i> BC 1001	300
13.4.4	Study of Potato Juice Quality During Aerobic and Anaerobic Storage	300
13.5	Brown Juice	300
13.5.1	Chemical Composition	300
13.5.2	Seasonal Variations	302
13.5.3	Lactic Acid Fermentation of Brown Juice	305
13.5.4	The Green Crop-drying Industry as a Lactic Acid Producer	306
13.6	Potato Juice	309
13.6.1	Potato Juice as Fermentation Medium	309
13.6.2	The Potato Starch Industry as Lactic Acid Producer	310
13.7	Carbohydrate Source	311
13.8	Purification of Lactic Acid	312
13.9	Conclusion and Outlook	313
	Acknowledgments	313
	References	313

Part III Biomass Production and Primary Biorefineries

14	Biomass Commercialization and Agriculture Residue Collection	317
	<i>James Hettenhaus</i>	
14.1	Introduction	317
14.2	Historical Outline	318
14.2.1	Case Study: Harlan, Iowa Corn Stover Collection Project	319
14.2.2	Case Study: Bagasse Storage – Dry or Wet?	321
14.2.2.1	Dry Storage	321
14.2.2.2	Wet Storage	323
14.3	Biomass Value	324
14.3.1	Soil Quality	324
14.3.2	Farmer Value	325
14.3.3	Processor Value	327
14.4	Sustainable Removal	328
14.4.1	Soil Organic Material	328
14.4.2	Soil Erosion Control	329
14.4.3	Cover Crops	331
14.5	Innovative Methods for Collection, Storage and Transport	332
14.5.1	Collection	332
14.5.1.1	Baling	333
14.5.1.2	One-pass Collection	333
14.5.2	Storage	334
14.5.2.1	Density	335
14.5.2.2	Storage Area	335

14.5.2.3	Storage Loss	335
14.5.2.4	Foreign Matter and Solubles	337
14.5.2.5	Storage Investment	337
14.5.3	Transport	337
14.5.3.1	Harvest Transport	338
14.5.3.2	Biorefinery Supply	338
14.6	Establishing Feedstock Supply	339
14.6.1	Infrastructure	340
14.6.1.1	Infrastructure Investment	340
14.6.1.2	Organization Infrastructure	340
14.7	Perspectives and Outlook	341
	References	342
15	The Corn Wet Milling and Corn Dry Milling Industry – A Base for Biorefinery Technology Developments	345

Part IV Biomass Conversion: Processes and Technologies

16	Enzymes for Biorefineries	357
	<i>Sarah A. Teter, Feng Xu, Glenn E. Nedwin, and Joel R. Cherry</i>	
16.1	Introduction	357
16.2	Biomass as a Substrate	359
16.2.1	Composition of Biomass	359
16.2.1.1	Cellulose	359
16.2.1.2	Hemicellulose	360
16.2.1.3	Lignin	360
16.2.1.4	Starch	360
16.2.1.5	Protein	361
16.2.1.6	Lipids and Other Extracts	361
16.2.2	Biomass Pretreatment	361

16.2.2.1	Dilute Acid Pretreatment	362
16.2.2.2	Ammonia Fiber Explosion	362
16.2.2.3	Hot-wash Pretreatment	362
16.2.2.4	Wet Oxidation	363
16.3	Enzymes Involved in Biomass Biodegradation	363
16.3.1	Glucanases or Cellulases	364
16.3.2	Hemicellulases	364
16.3.3	Nonhydrolytic Biomass-active Enzymes	365
16.3.4	Synergism of Biomass-degrading Enzymes	365
16.4	Cellulase Development for Biomass Conversion	366
16.4.1	Optimization of the CBH-EG-BG System	366
16.4.1.1	BG Supplement	366
16.4.1.2	Novel Cellulases with Better Thermal Properties	367
16.4.1.3	Structure–Function Relationship of EG	370
16.4.2	Other Proteins Potentially Beneficial for Biomass Conversion	371
16.4.2.1	Secretome of Cellulolytic Fungi	371
16.4.2.2	Hydrolases	373
16.4.2.3	Nonhydrolytic proteins	374
16.5	Expression of Cellulases	374
16.6	Range of Biobased Products	375
16.6.1	Fuels	376
16.6.2	Fine/Specialty Chemicals	378
16.6.3	Fuel Cells	378
16.7	Biorefineries: Outlook and Perspectives	380
16.7.1	Potential of Biomass-based Material/Energy Sources	380
16.7.2	Economic Drivers Toward Sustainability	381
	References	382
17	Biocatalytic and Catalytic Routes for the Production of Bulk and Fine Chemicals from Renewable Resources	385
	<i>Thomas Willke, Ulf Prüße, and Klaus-Dieter Vorlop</i>	
17.1	Introduction	385
17.1.1	Renewable Resources	385
17.1.2	Products	386
17.1.2.1	Bulk Chemicals and Intermediates	386
17.1.2.2	Fine Chemicals and Specialties	386
17.2	Historical Outline	387
17.3	Processes	388
17.3.1	Immobilization	389
17.3.2	Biocatalytic Routes from Renewable Resources to Solvents or Fuels	390
17.3.2.1	Ethanol Production with Bacteria or Yeasts?	390
17.3.3	Biocatalytic Route from Glycerol to 1,3-Propanediol	393
17.3.3.1	Introduction	393
17.3.3.2	The Process	393

17.3.4	Biocatalytic Route from Inulin to Diffructose Anhydride	397
17.3.4.1	Introduction	397
17.3.4.2	Enzyme Screening	398
17.3.4.3	Genetic Engineering	398
17.3.4.4	Fermentation of the Recombinant <i>E. coli</i>	399
17.3.4.5	Enzyme Immobilization and Scale-up	400
17.3.4.6	Summary	401
17.3.5	Chemical Route from Sugars to Sugar Acids	402
17.3.5.1	Introduction	402

Part I Biobased Product Family Trees

Carbohydrate-based Product Lines

1	The Key Sugars of Biomass: Availability, Present Non-Food Uses and Potential Future Development Lines	3
	<i>Frieder W. Lichtenthaler</i>	
1.1	Introduction	3
1.2	Availability of Mono- and Disaccharides	4
1.3	Current Non-Food Industrial Uses of Sugars	7
1.3.1	Ethanol	7
1.3.2	Furfural	8
1.3.3	D-Sorbitol ($\equiv$ D-Glucitol)	9
1.3.4	Lactic Acid $\rightarrow$ Polylactic Acid (PLA)	10
1.3.5	Sugar-based Surfactants	11
1.3.6	'Sorbitan' Esters	11
1.3.7	N-Methyl-N-acyl-glucamides (NMGA)	12
1.3.8	Alkylpolyglucosides (APG)	12
1.3.9	Sucrose Fatty Acid Monoesters	13
1.3.10	Pharmaceuticals and Vitamins	14
1.4	Toward Further Sugar-based Chemicals: Potential Development Lines	14
1.4.1	Furan Compounds	16
1.4.1.1	5-Hydroxymethylfurfural (HMF)	16
1.4.1.2	5-(Glucosyloxymethyl)furfural (GMF)	17
1.4.1.3	Furans with a Tetrahydroxybutyl Side-chain	19
1.4.2	Pyrones and Dihydropyranones	20

1.4.3	Sugar-derived Unsaturated N-Heterocycles	24
1.4.1.4	Pyrroles	24
1.4.1.5	Pyrazoles	26
1.4.1.6	Imidazoles	27
1.4.1.7	3-Pyridinols	28
1.4.1.8	Quinoxalines	28
1.4.4	Toward Sugar-based Aromatic Chemicals	29
1.4.5	Microbial Conversion of Six-carbon Sugars into Simple Carboxylic Acids and Alcohols	32
1.4.5.1	Carboxylic Acids	34
1.4.5.2	Potential Sugar-based Alcohol Commodities Obtained by Microbial Conversions	36
1.4.6	Chemical Conversion of Sugars into Carboxylic Acids	37
1.4.7	Biopolymers from Polymerizable Sugar Derivatives	40
1.4.7.1	Synthetic Biopolyesters	41
1.4.7.2	Microbial Polyesters	44
1.4.7.3	Polyamides	45
1.4.7.4	Sugar-based Olefinic Polymers ("Polyvinylsaccharides")	47
1.5	Conclusion	49
	References	51
 2	 Industrial Starch Platform – Status quo of Production, Modification and Application	 61
	<i>Dietmar R. Gröll, Franz Jetzinger, Martin Kozich, Marnik M. Wastyn, and Robert Wittenberger</i>	
2.1	Introduction	61
2.1.1	History of Starch	61
2.1.2	History of Industrial Starch Production	62
2.1.3	History of Starch Modification	62
2.2	Raw Material for Starch Production	63
2.3	Industrial Production of Starch	65
2.3.1	Maize and Waxy Maize	66
2.3.2	Wheat	66
2.3.3	Potato	69
2.3.4	Tapioca	70
2.3.5	Other Starches	71
2.4	Properties of Commercial Starches	71
2.5	Modification of Starch Water	76
2.5.1	Modification Technology	76
2.5.1.1	Slurry Process (Heterogeneous Conditions)	76
2.5.1.2	Dry Reactions	77
2.5.1.3	Paste Reactions (Homogeneous Conditions)	77
2.5.1.4	Extrusion Cooking	77
2.5.2	Types of Starch Modification	78
2.5.2.1	Physical Modification	78

2.5.2.2	Degraded Starches	79
2.5.2.3	Chemical Modification	80
2.6	Application of Starch and Starch Derivatives	82
2.6.1	The Paper and Corrugating Industries	83
2.6.1.1	Use of Starch in the Paper Industry	83
2.6.1.2	Use of Starch in the Corrugating Industry	85
2.6.2	The Textile Industry	85
2.6.2.1	Sizing Agents	85
2.6.2.2	Textile-printing Thickeners	86
2.6.2.3	Finishing Agents	86
2.6.3	Adhesives	87
2.6.4	Building Chemistry	87
2.6.5	Pharmaceuticals and Cosmetics	88
2.6.6	Laundry Starches	89
2.6.7	Bioconversion of Starch	89
2.6.8	Other Applications of Starch	91
2.7	Future Trends and Developments	92
2.7.1	Tailor-made Starches by Use of Biotechnological Tools	92
2.7.2	New Modification Technologies for New Properties	93
2.7.3	New Fields of Application	94
	Bibliography	95
3	Lignocellulose-based Chemical Products and Product Family Trees	97
	<i>Birgit Kamm, Michael Kamm, Matthias Schmidt, Thomas Hirth, and Margit Schulze</i>	
3.1	Introduction	97
3.2	Historical Outline of Chemical and Technical Aspects of Utilization Lignocellulose in the 19th and 20th Century	98
3.2.1	From the Beginnings of Lignocellulose Chemistry Until 1800	98
3.2.2	Lignocellulose Chemistry in the Eighteenth Century	99
3.2.2.1	Cellulose Saccharification	99
3.2.2.2	Oxalic Acid	99
