Preface — VII

Introduction — 1

1 Method of Generalized Eikonal — 15

- 1.1 Integral representation of solution — 15
 - 1.1.1 Statement of the problem — 15
 - 1.1.2 Construction of “auxiliary” domain and generalized geometrical optics function — 16
 - 1.1.3 Boundary conditions — 20
 - 1.1.4 Features of the solution — 23
- 1.2 Asymptotic calculation of contour integrals by method of stationary phase — 24
 - 1.2.1 General solution — 25
 - 1.2.2 Solution of diffraction problem for plane and cylindrical waves by the method of generalized eikonal — 27

2 Solution of Two-dimensional Problems by the Method of Generalized Eikonal — 35

- 2.1 Introduction — 35
- 2.2 Diffraction by half-plate — 36
 - 2.2.1 Solution on the given curve r_{d0} — 40
 - 2.2.2 Power normalization — 42
 - 2.2.3 Solution by method of successive diffractions (MSD) — 46
 - 2.2.4 Results of calculations — 48
- 2.3 Diffraction by a truncated wedge — 56
 - 2.3.1 Schwarz–Christoffel integral — 59
 - 2.3.2 Features of solution for half-plate — 60
 - 2.3.3 Solution by method of successive diffractions — 62
 - 2.3.4 Principles for the construction of heuristic solutions for diffraction by truncated wedge — 63
 - 2.3.5 Solution with generalized Fresnel integral — 64
 - 2.3.6 Numerical results — 67
 - 2.3.7 Analysis of solutions — 67

3 Application of Two-dimensional Solutions to Three-dimensional Problems — 73

- 3.1 Integrals over elementary strips — 73
 - 3.1.1 Statement of the diffraction problem — 73

3.1.2	Infinite cylinder —	75
3.1.3	Far zone condition —	76
3.1.4	Fragment of cylindrical surface —	78
3.1.5	Polygonal edge —	79
3.2	Application of two-dimensional solutions to three-dimensional problems —	81
3.2.1	Physical optics solution for diffraction by a plane scatterer. Properties of contour integral —	81
3.2.2	Rigorous 3D formulas —	82
3.2.3	Comparison with 2D case —	84
3.2.4	Total current diffraction coefficients —	84
4	Diffraction by a Plane Perfectly Conducting Angular Sector (Heuristic Approach) —	85
4.1	Statement of the problem —	85
4.2	Solution in physical optics approximation —	87
4.2.1	Contour integral with enforced far zone condition —	89
4.2.2	Inputs of edges and vertices —	90
4.3	Solution in EECM approximation —	96
4.3.1	Rigorous solution for oblique incident wave —	96
4.3.2	Substitution of polarization components of diffraction coefficients —	98
4.4	Modified EECM —	101
4.5	Applicability limits of heuristic approaches —	106
4.5.1	Solution algorithm —	106
4.5.2	Applicability limits of heuristic solutions —	108
5	Propagation of Radio Waves in Urban Environment (Deterministic Approach) —	109
5.1	Relevance of the problem —	109
5.2	Specifics of radio wave propagation in urban environment —	111
5.3	Design formulas —	112
5.3.1	Zone significant for radio wave propagation —	112
5.3.2	Reference solutions —	114
5.3.3	Mutual coupling between two antennas —	115
5.3.4	Energy relationships —	117
5.3.5	Fresnel zone —	119
5.3.6	Derivation of heuristic formulas —	121
5.3.7	Solution algorithm —	121

6	Analytical Heuristic Solution for Wave Diffraction by a Plane Polygonal Scatterer — 125
6.1	Introduction — 125
6.2	Problem formulation for elastic wave diffraction — 126
6.3	Approach to derivation of formulas — 130
6.4	General form of the solution — 134
7	Conclusion — 135
A	Application of Stokes Theorem to Diffraction Problems — 139
A.1	Stokes theorem. Relationship between the surface and contour integrals — 139
A.2	Integral over the surface of a finite-size polygon — 141
A.3	Integral over the surface of a plane angular sector — 143
A.4	Vertex waves for a finite-size polygon — 144
A.5	Phase function and far zone condition — 147
B	Rigorous Two-dimensional Solution for Diffraction by Half-plane — 149
C	Application of Imaginary Edge in Diffraction Problems — 157
D	Summary of Formulas for Diffraction by Plane Angular Sector — 163
E	Fresnel Integral and its Properties — 169
F	Generalized Fresnel Integral and Its Properties — 173
G	Electromagnetic Wave Diffraction by Semi-transparent Plate — 177
H	Generalized Diffraction Coefficient and its Application to Diffraction Problems — 181
	Bibliography — 193
	Index — 199
