

Table of Contents

Section A: Manual

1 Introduction	3	Sympathectomy	21
The Role of Medical Thoracoscopy/Pleuroscopy in Respiratory Medicine	3	Thoracic Lymphadenectomy	21
History and Development of Thoracoscopy/Pleuroscopy	4	Cervical Mediastinoscopy versus VATS	21
Artificial Pneumothorax	4	Anterior Mediastinotomy versus VATS	21
Pleural Drainage	5	Summary	21
Introduction of Thoracoscopy as a Diagnostic Method	5	3 Indications for and Results of Medical Thoracoscopy/Pleuroscopy	22
Use of Thoracoscopy for Diagnostic Purposes	7	Management of Pleural Effusions	23
Thoracoscopy as a Therapeutic Procedure in Tuberculosis (Jacobaeus Operation)	7	Diagnostic Approach	23
Thoracoscopy as a Therapeutic Tool in Nontuberculous Disease	10	Malignant Pleural Effusions	25
Further Development of Thoracoscopy as an Important Diagnostic Tool	11	Tuberculous Pleural Effusions	29
Development of Thoracoscopy for Minimally Invasive Thoracic Surgery ("Surgical Thoracoscopy")	14	Parapneumonic Effusions and Pleural Empyema	31
2 Differences between Medical Thoracoscopy/Pleuroscopy and Surgical Thoracoscopy/Video-assisted Thoracic Surgery	16	Effusions of Other Origin	32
Video-assisted Thoracic Surgery (VATS)	16	"Idiopathic" Pleural Effusions	33
General Approach to VATS Procedures	17	Options in the Local Treatment of Pleural Effusions Including Thoracoscopic Talc Pleurodesis	35
Anesthesia	18	The Place of Medical Thoracoscopy/Pleuroscopy in the Management of Pneumothorax	41
Indications and Contraindications	18	Primary Spontaneous Pneumothorax	42
Lung Procedures Performed with VATS	18	Secondary Spontaneous Pneumothorax	44
Lung Biopsy	18	Catamenial Pneumothorax	45
Wedge Resection	18	The Place of Medical Thoracoscopy/Pleuroscopy in the Diagnosis of Diffuse Lung Diseases	46
Pulmonary Metastases	18	Medical Thoracoscopy/Pleuroscopy in Other Indications	48
Lobectomy	19	Medical Thoracoscopic Sympathectomy	48
Lung Volume Reduction Surgery	19	Splanchnicectomy	50
Pleural Procedures Performed with VATS	19	Pericardial Fenestration	50
Treatment of Pneumothorax	19	Solitary Lung Lesions	51
Decortication	20	Diseases in the Region of the Chest Wall, Diaphragm, and Thoracic Spine	51
Esophageal Procedures Performed with VATS	20	Mediastinal Tumors	51
Excision of Cysts and Benign Tumors	20	Postoperative Cavities	51
Anti-reflux Procedures	20	4 Medical Thoracoscopy/Pleuroscopy in Children	53
Esophagectomy	20	5 Medical Thoracoscopy/Pleuroscopy in Animals	54
Mediastinal Procedures	20	Use for Diagnosis and Treatment in Animals	54
Thymectomy	20	Use for Research in Animals	54
Thoracic Duct Ligation	20	Use for Teaching of the Technique	54
Pericardial Window	20		

6 Medical Thoracoscopy/Pleuroscopy in Research	56	11 Techniques of Medical Thoracoscopy/Pleuroscopy	69
Future Areas of Research	56	Endoscopy Room	69
7 Clinical Prerequisites for Medical Thoracoscopy/Pleuroscopy	57	Sterile Conditions	70
8 Contraindications	58	Patient Monitoring during the Procedure	71
9 Complications and Their Prevention	60	Personnel	71
Prethoracoscopic/Prepleuroscopic Complications	60	Equipment	71
Air Embolism	60	Rigid Thoroscopes	72
Hypersensitivity Reaction to Local Anesthetic	61	The Semirigid (Semiflexible) Pleuroscope	73
Complications during Medical Thoracoscopy/Pleuroscopy	61	Phases of Medical Thoracoscopy/Pleuroscopy	76
Pain	61	Patient Positioning	76
Hypoxemia	61	Selecting the Point of Entry	78
Hypoventilation	61	Point of Entry for Specific Localized Lesions	78
Cardiac Arrhythmias	61	Techniques for Introduction of the Endoscope in Pleural Effusion, Pneumothorax, and Other Conditions	78
Hypotension	61	Access to the Pleural Space	78
Hemorrhage	61	Anesthesia for Medical Thoracoscopy/Pleuroscopy	84
Injury to Lung or Other Organs	61	Technique of Local Anesthesia	84
Postthoracoscopic/Postpleuroscopic Complications	62	Additional Technical Suggestions	86
Reexpansion Pulmonary Edema	62	Performance of Rigid Thoracoscopy	86
Pain	62	Direct and Video-Controlled Inspection	88
Postoperative Fever	62	Biopsy Techniques	89
Wound Infection	62	Stapled Wedge Resection	91
Empyema	62	Performance of Semirigid (Semiflexible) Pleuroscopy	92
Subcutaneous Emphysema	62	Comparison of the Rigid and Semirigid Techniques	92
Persisting Pneumothorax	62	Evaluation of Specimens	93
Prolonged Air Leakage	62	Technique of Thoracoscopic Talc Pleurodesis	93
Continuing Pleural Fluid Production/Pleurodesis Failure	63	Chest Tube Care	95
Early Complications after Talc Pleurodesis	63	Drainage Systems	95
Late Complications after Talc Pleurodesis	63	Assessment of Chest Tube Function	96
Seeding of Chest Wall by Tumor Cells/Implantation of Tumor Cells	63	Chest Tube Removal	98
Mortality	63	12 Documentation	99
Summary	64	13 Teaching Methods	100
10 Knowledge and Skills Required	65	Suggestions for Learning the Technique	100
Knowledge of Respiratory Diseases	65		
Knowledge of Thoracic Anatomy	65		
Knowledge of the Pathophysiology of the Pleura	67		
Skills	67		

Section B: Atlas

14 Malignant Pleural Effusions due to Lung Cancer	103	18 Tuberculous Pleural Effusions	124
15 Pleural Effusions due to Diffuse Malignant Mesothelioma and Asbestos-related Pleural Diseases	108	19 Pleural Effusions of Other Origin	130
16 Malignant Pleural Effusions Secondary to Metastatic Neoplasms	115	20 Pneumothorax	137
17 Pleural Effusions due to Malignant Lymphoma/Myeloproliferative Neoplasm ...	122	21 Diffuse Lung Diseases	143
		22 Other Indications	150
		References	156
