1 Objective and motivation 1

1.1 Mechatronic system 1

1.2 Development methods of mechatronic systems 2

1.2.1 Development methods 3

1.2.2 Modeling and simulation 4

1.3 Electrical power window regulator 5

1.4 Objectives and structure of the thesis 5

2 State of the art 9

2.1 State of the art – window regulator systems 9

2.1.1 Rail guided cable driven window regulators 9

2.1.2 Crossarm window regulators 10

2.1.3 Track guided window regulators 11

Bibliografische Informationen
http://d-nb.info/1074255739

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.1.4 Comparison of window regulators 11

2.2 State of the art – simulation methods of window regulator systems 12

2.2.1 State of the art 12

2.2.2 Requirements to simulations of window regulator systems 15

2.3 System approach 16

2.3.1 System simulation 16

2.3.2 Modeling language and simulation engine 17

2.4 System decomposition and steps in using modeling and simulation 19

2.4.1 System decomposition 19

2.4.2 Steps in using modeling & simulation 20

3 Modeling of electrical window regulator system - Analytical investigation 23

3.1 Modeling and simulation of the behavior of analytical model 23

3.1.1 Analytical model 23

3.1.2 Theoretical investigations - Method of averaging . 25

3.2 Parameter identification – Equivalent mass of motor armature 33

4 Mechatronical models for window regulator systems and their components 35

4.1 Window regulator drive 35

4.1.1 DCPM motor 36

4.1.2 Worm gear 55
4.1.3 Rubber damper 82
4.1.4 Drive 85
4.2 Rail guided cable driving window regulator Mechanism . 97
4.2.1 Components 97
4.2.2 Mechanism 116
4.3 Additional components for window regulator system in working environment 127
4.3.1 Mechanical system of car door 127
4.3.2 Drive speed measurement system 134
4.3.3 Electronic system and electrical switch 138
4.3.4 Anti-pinch force measurement system 141

5 Integration of components in window regulator system and applications of simulations 143

5.1 Models of generic rail guided cable window regulator system 143
5.2 Simulation environment: BroSAnT 147
5.2.1 Types of simulations 148
5.3 Applications of simulation 151
5.3.1 Selection of electrical drive 151
5.3.2 Examination of anti–pinch function in early phase 157
5.3.3 Investigation of design parameters 159

6 Summary and outlook 163

Appendices 169

A Content and structure of models in modeling language VHDL – Model of DCPM motor as an example 169

B Comparison of parameter identification methods for model of DCPM motor 173

Bibliography 181
