

Contents

Preface — v

Contributing authors — xv

Abbreviations — xix

Introduction to Biorefinery — 1

Michele Aresta, Angela Dibenedetto, and Franck Dumeignil

1 Catalysis, growth, and society — 5

Myrsini Christou, Efthymia Alexopoulou, Ioannis Eleftheriadis, Ioanna Papamichael, Kostas Tsiotas, Mariusz Stolarski, Michal Krzyzaniak, and Charles Themistocles

2 Terrestrial biomass production — 13

2.1 Introduction — 13

2.1.1 Land availability — 14

2.1.2 The crops — 14

2.1.2.1 The oil crops — 15

2.1.2.2 The lignocellulosic crops — 16

2.2 Land suitability — 18

2.2.1 Oil crops — 18

2.2.1.1 Data sets — 18

2.2.1.2 Determination of selection criteria — 19

2.2.2 Lignocellulosic crops — 25

2.3 Crop setting up — 26

2.3.1 Oil crops — 26

2.3.1.1 Soil preparation — 26

2.3.1.2 Sowing — 27

2.3.1.3 Irrigation — 30

2.3.1.4 Fertilization — 30

2.3.1.5 Weeding — 31

2.3.1.6 Crop rotations — 32

2.3.2 Lignocellulosic crops — 32

2.3.2.1 Soil type requirement — 32

2.3.2.2 Soil preparation — 33

2.3.2.3 Planting — 33

2.3.2.4 Irrigation — 34

2.3.2.5 Fertilization — 35

2.3.2.6 Weeding — 35

2.4	Yields — 35
2.4.1	Oil crops — 35
2.4.1.1	Experimental design — 36
2.4.1.2	Results — 36
2.4.2	Lignocellulosics — 40
2.4.2.1	Giant reed — 40
2.5	Crop harvesting — 46
2.5.1	Oil crops — 46
2.5.1.1	Castor — 46
2.5.1.2	Crambe — 47
2.5.1.3	Safflower — 48
2.5.2	Giant reed — 48
2.6	Fuel characterization — 51
	Bibliography — 53

Angela Dibenedetto and Antonella Colucci

3	Production and uses of aquatic biomass — 57
3.1	Introduction — 57
3.2	Classification of aquatic biomass — 58
3.2.1	Macroalgae — 58
3.2.2	Microalgae — 58
3.2.3	Plants — 59
3.3	Cultivation of aquatic biomass — 60
3.3.1	Macroalgae — 60
3.3.2	Microalgae — 62
3.4	Harvesting of aquatic biomass — 65
3.4.1	Macroalgae — 65
3.4.2	Microalgae — 66
3.5	Composition of aquatic biomass — 67
3.5.1	Bio-oil content of aquatic biomass — 69
3.5.2	The quality of bio-oil — 71
3.6	Technologies for algal oil and chemicals extraction — 73
3.6.1	Fractionation of algal biomass — 73
3.6.2	Extraction using chemico-physical methods — 74
3.6.3	Conventional solvent extraction — 75
3.6.4	Supercritical fluid extraction (SFE) — 75
3.6.5	Biological extraction — 76
3.7	Conclusions — 76
	Bibliography — 77

Christin Groeger, Wael Sabra, and An-Ping Zeng

4 Introduction to bioconversion and downstream processing: principles and process examples — 81

- 4.1 Introduction — 81
- 4.2 Principles of bioconversion process — 83
- 4.3 Examples of bioconversion processes — 85
 - 4.3.1 Microbial production of 1,3-propanediol from glycerol — 85
 - 4.3.2 Bioproduction of *n*-butanol — 86
- 4.4 Downstream processing — 91
 - 4.4.1 General scheme of downstream processing of fermentation broth — 91
 - 4.4.2 Downstream processing methods for 1,3-PDO and *n*-butanol — 94
 - 4.4.2.1 Evaporation and distillation — 95
 - 4.4.2.2 Gas stripping — 96
 - 4.4.2.3 Extraction methods — 97
 - 4.4.2.4 Pervaporation/Membrane separation — 99
 - 4.4.2.5 Adsorption and Chromatography — 100
- 4.5 Concluding remarks — 102
- Bibliography — 104

Gennaro Agrimi, Isabella Pisano, Maria Antonietta Ricci, and Luigi Palmieri

5 Microbial strain selection and development for the production of second-generation bioethanol — 109

- 5.1 Introduction — 109
- 5.2 Enzymatic hydrolysis — 111
 - 5.2.1 Identification and development of biocatalysts for cellulose and hemicellulose hydrolysis — 112
- 5.3 Fermentation inhibitors in lignocellulosic hydrolyzate — 117
 - 5.3.1 Weak acids — 117
 - 5.3.2 Furan derivatives: furfural and HMF — 118
 - 5.3.3 Phenolic compounds — 118
 - 5.3.4 Other inhibitors — 119
 - 5.3.5 Detoxification — 120
 - 5.3.5.1 Physical and chemical detoxification methods — 120
 - 5.3.5.2 Biological detoxification methods — 120
 - 5.3.6 Development of biocatalysts with enhanced resistance to fermentation inhibitors — 121
- 5.4 Fermentation — 122
 - 5.4.1 Separate hydrolysis and fermentation (SHF) — 123

5.4.2	Simultaneous saccharification and fermentation (SSF) — 123
5.4.3	Simultaneous saccharification and co-fermentation (SSCF) — 125
5.4.4	Consolidated bioprocessing (CBP) — 125
5.4.5	High-gravity fermentation — 126
5.5	Microbial biocatalysts — 127
5.5.1	<i>Escherichia coli</i> — 127
5.5.2	<i>Zymomonas mobilis</i> — 128
5.5.3	Other bacteria — 129
5.5.4	<i>Saccharomyces cerevisiae</i> — 129
5.5.4.1	Expression of the fungal xylose utilization pathway — 130
5.5.4.2	Expression of the bacterial xylose utilization pathway — 132
5.5.4.3	Expression of the arabinose utilization pathway — 132
5.5.5	Other yeasts — 133
5.6	Strain development for CBP — 134
	Bibliography — 136

Benjamin Katryniok, François Jérôme, Eric Monflier, Sébastien Paul,
and Franck Dumeignil

6	Biomass-derived molecules conversion to chemicals using heterogeneous and homogeneous catalysis — 141
6.1	Introduction — 141
6.2	Lignocellulosic biomass — 142
6.2.1	Natural polymers processing — 142
6.2.1.1	Glucidic polymers — 142
6.2.1.2	Lignin — 143
6.2.2	C1–C6 molecules — 146
6.2.2.1	C1 starting materials: biogas and syngas — 146
6.2.2.2	C2 molecule – ethanol — 147
6.2.2.3	C3 molecules – glycerol and lactic acid — 148
6.2.2.4	C4 molecules – succinic acid, 1,4-butanediol, γ -butyrolactone, butanol, <i>iso</i> -butanol, and olefins — 150
6.2.2.5	C5 molecules – xylose, furfural, levulinic acid, and isoprene — 152
6.2.2.6	C6 molecules – 5-hydroxymethylfurfural, 2,5-furandicarboxylic acid, and sorbitol — 153
6.3	Oleaginous biomass — 154
6.3.1	Separation and primary products — 154
6.3.1.1	Triglycerides — 155
6.3.1.2	Fatty acids and esters — 156
6.4	Conclusion — 160
	Bibliography — 160

Alfonso Grassi, Antonio Buonerba, and Sheila Ortega Sanchez

7 Bio-sourced polyolefins — 165

7.1 Introduction: why renewable polymers? — 165

7.2 Bioderived conventional polyolefins: the drop-in synthesis of olefins — 168

7.3 New polyolefins from bioderived monomers — 175

7.4 Outlook and perspective — 188

Bibliography — 190

Eleni Heracleous, Efterpi S. Vasiliadou, Eleni F. Iliopoulou, Angelos A. Lappas, and Angeliki A. Lemonidou

8 Conversion of lignocellulosic biomass-derived intermediates to hydrocarbon fuels — 197

8.1 Introduction — 197

8.2 Upgrading of bio-oil from biomass pyrolysis — 198

8.2.1 Upgrading of bio-oil to hydrocarbons by hydrodeoxygenation — 200

8.2.2 Upgrading of bio-oil via C-C coupling reactions — 202

8.2.3 Upgrading of bio-oil to hydrocarbons by fluid catalytic cracking (FCC) — 204

8.3 Sugars to hydrocarbon fuels — 208

8.4 Upgrading of butanol to fuels — 212

8.5 Challenges – outlook — 214

Bibliography — 216

Marco Ricci and Carlo Perego

9 Use of bio-sourced syngas — 219

9.1 Introduction — 219

9.2 Uses of syngas — 220

9.2.1 Syngas as a fuel — 220

9.2.2 Syngas as a chemical feedstock — 220

9.2.2.1 Hydrogen production and uses — 221

9.2.2.2 Ammonia production and uses — 222

9.2.2.3 Urea production and use — 222

9.2.2.4 Methanol production and uses — 223

9.2.2.5 Oxo chemicals production and uses — 224

9.2.3 Transportation fuels from syngas: the Fischer-Tropsch process — 225

9.2.3.1 Fischer-Tropsch to fuels: biomass-to-liquids processes — 225

9.2.3.2 Fischer-Tropsch to olefins — 228

9.2.3.3 Feeding Fischer-Tropsch reactions with CO₂ — 229

9.3 Syngas fermentation — 230

9.4 Perspectives — 232

Bibliography — 232

Jean-Luc Couturier and Jean-Luc Dubois

10 Oil chemistry: chemicals, polymers, and fuels — 235

- 10.1 Introduction — 235
- 10.2 Industrial applications of oil chemistry — 238
- 10.3 EuroBioRef case studies — 241
 - 10.3.1 General description of the value chains — 241
 - 10.3.2 Oil production — 243
 - 10.3.3 Competition analysis — 244
 - 10.3.4 Technology analysis — 247
 - 10.3.4.1 IPscore analysis — 247
 - 10.3.4.2 Risk and SWOT analysis — 248
 - 10.3.4.3 Life cycle assessment (LCA) — 249
 - 10.3.4.4 Technology Readiness Level (TRL) assessment – actual demonstration status — 249
 - 10.3.5 Costs analysis — 252
 - 10.3.5.1 Capital expenditure (CAPEX) evaluation — 252
 - 10.3.5.2 Production costs evaluation — 252
 - 10.3.5.3 Job creation — 252
 - 10.3.5.4 Business model — 253
 - 10.3.5.5 Co-location in existing assets — 254
- 10.4 Conclusions — 254
- Bibliography — 255

Heiko Lange, Elisavet D. Bartzoka, and Claudia Crestini

11 Lignin biorefinery: structure, pretreatment and use — 257

- 11.1 Introduction — 257
- 11.2 Origin and characteristics of lignin — 258
 - 11.2.1 Lignin occurrence and location — 258
 - 11.2.2 Lignin structure — 258
- 11.3 Potential sources of biorefinery lignin — 262
 - 11.3.1 Lignin pretreatment — 262
 - 11.3.2 Kraft lignin process — 262
 - 11.3.3 The sulfite pulping process — 263
 - 11.3.4 Organosolv lignin — 264
 - 11.3.5 Pyrolysis process — 265
 - 11.3.6 Steam explosion lignin — 266
 - 11.3.7 Other processes — 266
- 11.4 The use of lignin in current and future biorefinery schemes — 266
 - 11.4.1 Power – green fuels – syngas — 269
 - 11.4.2 Macromolecules — 269
 - 11.4.3 Aromatics and chemicals — 271

11.4.4	Applications in nanomaterials —	273
11.4.4.1	Capsules —	273
11.4.4.2	Nanoparticles —	274
11.4.4.3	Microporous and nanoporous materials —	275
11.5	Conclusions and perspectives —	276
	Bibliography —	276

Raf Roelant, Fabrizio Cavani, Carla S.M. Pereira, and Alírio E. Rodrigues

12	Utilization of existing assets —	283
12.1	Introduction —	283
12.1.1	Why utilizing existing plants to implement bio-based technology? —	283
12.1.2	Kinds of integration scenarios —	284
12.2	Case study 1: maleic anhydride production in a phthalic anhydride plant —	285
12.2.1	General —	285
12.2.2	Technological aspects of the retrofit —	286
12.2.3	Economic evaluation —	288
12.2.4	Demonstration status —	290
12.2.5	Strengths, weaknesses, opportunities, and threats analysis —	292
12.2.6	Value creation —	292
12.2.7	Concluding remarks —	293
12.3	Case study 2: 1,1-dibutoxyethane production added to an <i>n</i> -butanol plant in Europe —	293
12.3.1	General —	293
12.3.2	Technological aspects —	294
12.3.3	Demonstration status —	295
12.3.4	Strengths, weaknesses, opportunities, and threats analysis —	297
12.3.5	Value creation —	297
12.3.6	Concluding remarks —	298
12.4	Perspective view —	299
	Bibliography —	299

Michele Aresta

13	Biogas from wet biomass: basic science and applications —	301
13.1	Introduction —	301
13.1.1	The “aerobic” and “anaerobic” processes for wet WB —	301
13.2	Structure of raw materials used for biogas production —	304
13.2.1	Cellulose —	304
13.2.2	Hemicellulose —	305
13.2.3	Lignin —	305
13.2.4	Pectin —	306

13.2.5	Starch — 306
13.2.6	Lipids — 307
13.2.7	Proteins — 307
13.3	The phases of biogas production — 308
13.3.1	Anaerobic digestion: a nature-based biotechnology — 309
13.3.2	Hydrolytic bacteria and acidogenesis — 310
13.3.2.1	Transitional bacteria — 311
13.3.2.2	Acetogenesis — 312
13.3.2.3	Bacterial flora composition — 312
13.4	Role of hydrogenases — 313
13.4.1	[FeFe]H ₂ -ase — 313
13.4.2	[FeS]H ₂ -ase — 314
13.4.3	[NiFe]H ₂ -ase and [Fe-Ni-Se]-ase — 314
13.4.4	Molybdenum-iron-containing N ₂ -ase — 316
13.5	Methanogenic bacteria — 317
13.5.1	Methanogenesis — 318
13.5.2	The laboratory equipment for biogas production and system investigation — 320
13.6	Industrial reactors — 322
13.6.1	Types of reactors and configuration of biogas plants — 327
13.6.1.1	Solid content — 327
13.6.1.2	Temperature — 327
13.6.1.3	Liquid and solid retention time — 327
13.6.1.4	Continuity of the process — 327
13.6.2	Biogas from wastewaters — 329
	Bibliography — 331

	Index — 339
