1	Introduction	1
1.1	Strongly Correlated Materials	1
1.2	Basic Models in Strongly Correlated Systems Theory	4
1.3	Methods for Models Investigation	6
1.4	Ab-initio Electronic Structure Calculation Methods	7
2	Electronic Structure Calculations in One-Electron Approximation	9
2.1	Density Functional Theory and Electronic Structure Calculations Methods	9
2.1.1	Density Functional Theory	9
2.1.2	Electronic Structure Calculations Methods Based on DFT	11
2.1.3	Breakdown of Local Density Approximation for Strongly Correlated Systems	14
2.1.4	Corrections for Electron–Electron Correlations	15
2.2	Determining Problem Hamiltonian from Density Functional Theory	18
2.2.1	Problem Definition	18
2.2.2	Coulomb Interaction Hamiltonian	19
2.2.3	Double-Counting Problem for Coulomb Interaction	20
2.2.4	Wannier Functions as Coulomb Interaction Hamiltonian Basis	21
2.2.5	Coulomb Parameter U Value from Constrain DFT Calculation	26
2.3	Static Mean-Field Approximation: $LDA + U$ Method	30
2.4	$LDA + U$ Method Applications	33
2.4.1	Mott Insulators: NiO , CoO , and $CaCuO_2$	33
2.4.2	Charge Ordering: Fe_3O_4	35
2.4.3	Orbital Ordering: $KCuF_3$	38
2.4.4	Orbital and Charge Ordering: $Pr_{0.5}Ca_{0.5}MnO_3$	41
2.4.5	Spin Ordering: CaV_nO_{2n+1}	43

3	Hubbard Model in Dynamical Mean-Field Theory	47
3.1	Reducing Lattice Model to Effective Single Impurity Anderson Model	47
3.1.1	Electronic Green Function	47
3.1.2	Single Impurity Anderson Model	49
3.1.3	Basic <i>DMFT</i> Equations	53
3.1.4	<i>DMFT</i> Equations for Bethe Lattice	55
3.1.5	Methods for Solution of Single Impurity Anderson Model	55
3.2	Quantum Monte Carlo Method as Single Impurity Anderson Model Solver	59
3.2.1	Hirsch–Fye Algorithm	59
3.2.2	Maximum Entropy Method for Spectral Function Calculation	66
3.2.3	<i>QMC</i> for Single Impurity Anderson Model with Orbital Degrees of Freedom	72
3.2.4	Projective Quantum Monte Carlo Method	73
3.2.5	Continuous-Time <i>QMC</i>	76
3.3	Hubbard Model Spectral Function in <i>DMFT</i> Approximation	82
3.3.1	Three Peak Spectral Structure for Half-Filling	82
3.3.2	Metal–Insulator Phase Transition	87
3.4	Hubbard Model with Deviation from Half-Filling	90
3.4.1	Quasiparticle Peak Evolution	90
3.4.2	Phase Diagram for $T = 0$	90
3.4.3	Spin-Polarized Case	94
3.5	Antiferromagnetism	98
3.5.1	<i>DMFT</i> Equations with Antiferromagnetic Order Parameter	98
3.5.2	<i>NRG</i> Method Results for <i>AFM</i> Phase	101
3.6	Superconductivity in Two-Dimensional Hubbard Model	106
3.6.1	<i>DMFT</i> Equations for Superconducting State	106
3.6.2	Coexistence Problem for Superconducting and Antiferromagnetic Order Parameters	109
3.7	Transport Properties and Susceptibility	111
3.7.1	Optical Conductivity	111
3.7.2	Magnetic Susceptibility	114
4	<i>DMFT</i> Extensions	121
4.1	$t - J$ Model as a Hubbard Model Limit	121
4.1.1	Hamiltonian and Green Function	121
4.1.2	<i>DMFT</i> Equations Derivation	123
4.1.3	Reformulation of <i>DMFT</i> Equations	125
4.1.4	Numerical Calculation Results	128

4.2	<i>DMFT</i> Extensions for Nonlocal Coulomb and Exchange Interaction Case	130
4.2.1	Hamiltonian and Green Function for Extended Model	130
4.2.2	<i>EDMFT</i> for Homogeneous System	132
4.2.3	<i>EDMFT</i> for the System with Two Sublattices	134
4.2.4	<i>DMFT</i> with Orbital Degeneracy	137
4.2.5	<i>QMC</i> Impurity Solver for the Problem with Orbital Degeneracy	139
4.2.6	Exchange Interactions in <i>QMC</i>	140
4.2.7	Continuous-Time <i>QMC</i> for Two-Orbital Model	141
4.3	Taking into Account Spatial Fluctuations	144
4.3.1	Heuristic Approach to <i>DMFT</i> Extension for Spatial Fluctuations	144
4.3.2	Dynamical Vertex Approximation	148
4.3.3	Pseudogap	151
4.3.4	Dynamical Cluster Method	157
4.4	Generating Functional for Green Functions	161
4.4.1	Baym-Kadanoff Functional	161
4.4.2	Total Energy	162
4.5	<i>DMFT</i> for Systems with Disorder	164
4.5.1	Anderson-Hubbard Model	164
4.5.2	Phase Diagram for Nonmagnetic State	165
4.5.3	Optical Conductivity	169
5	Periodic Anderson Model (<i>PAM</i>)	173
5.1	Early Studies for <i>PAM</i>	173
5.1.1	<i>PAM</i> as a Basic Model for Heavy Fermion Systems	173
5.1.2	Review of Early Analytical Studies for <i>PAM</i>	175
5.1.3	<i>DMFT</i> for <i>PAM</i>	178
5.2	<i>PAM</i> Studies by <i>DMFT</i> Method	180
5.2.1	<i>DMFT(NRG)</i> Results at $T = 0$	180
5.3	Kondo Lattice	186
5.3.1	<i>DMFT</i> for Kondo Lattice	186
5.3.2	Numerical Renorm-Group Method for Single Impurity Kondo Problem Solution	187
5.3.3	Two Energy Scales	189
5.3.4	Photoemission Spectra Calculations by <i>NRG</i> Method	191
5.3.5	Magnetic Ordering in Kondo Lattice Study by Continuous-Time <i>QMC</i> Method	193
5.4	Ferromagnetic Kondo Lattice	196
5.4.1	<i>DMFT</i> Equations for <i>sd</i> -Model with Classical Spin	196
5.4.2	Analysis of <i>DMFT</i> Equations Solution	198

6	Electronic Structure Calculations for Real Materials by <i>LDA + DMFT</i> Method	203
6.1	Combining Density Functional Theory and Dynamical Mean-Field Theory: <i>LDA + DMFT</i> method	203
6.1.1	Coulomb Interaction	203
6.1.2	Computation of Lattice and Local Green Functions in General Case	204
6.1.3	Total Energy Calculation in <i>LDA + DMFT</i>	206
6.2	Early Transition Metal Oxides: Mott Insulators and Strongly Correlated Metals	207
6.2.1	SrVO_3 : One Electron in Degenerate <i>d</i> -Band, Strongly Correlated Metal	208
6.2.2	V_2O_3 : Two Electrons in <i>d</i> -Band with Trigonal Crystal-Field Splitting	214
6.2.3	LiV_2O_4 : Heavy Fermion in <i>d</i> -Electron System	218
6.3	Late Transition Metal Oxides: Charge Transfer Insulators	220
6.3.1	NiO : Band Structure for Charge Transfer Insulator	220
6.3.2	MnO : Metal-Insulator Transition with Pressure and <i>d</i> -ion Magnetic Moment Collapse	224
6.4	<i>f</i> -Electron Systems: $\alpha - \gamma$ Transition in Ce	229
6.5	Manganites	232
6.5.1	Manganites Physical Properties	232
6.5.2	Electronic Model for Manganites	234
6.5.3	<i>QMC</i> for Systems with Electron-Lattice Coupling	235
6.5.4	<i>LDA + DMFT(QMC)</i> Results for $\text{La}_{1-x}\text{Sr}_x\text{MnO}_3$	239
6.6	High- T_c Superconductors Based on Pnictides Compounds	244
6.7	The List of Strongly Correlated Materials Investigated by <i>DMFT</i> Method	249
7	Conclusion	253
A	Functional Integral and Partition Function	257
B	Green Functions Formalism	271
