

CONTENTS

1.0 INTRODUCTION	11
1.1 BEAUTY	13
1.2 NATURE AND BEAUTY	23
1. Organic form	23
2. "The whole is prior to the parts"	25
3. The teeth as constructional elements of the masticatory system	27
4. Variation and individuality: Unity in diversity – diversity over simplicity	31
5. Construction plans	35
6. Canonical beauty	52
7. Social organs	58
2.0 DE DENTIBUS	65
2.1 MORPHOLOGY OF THE UPPER ANTERIORS	67
A. Incisors	72
1. The upper central incisor	77
2. The upper lateral incisor	102
B. Canines	112
2.2 PARAMETERS OF DENTAL AESTHETICS	127
1. Why rules?	127
2. Planning	128
3. The essence of the criteria	130
4. How are criteria ascertained?	132
5. The viewing angle	133
6. Aesthetic Levels	135

2.3 DESIGN CRITERIA	141
1. The face	141
2. The smile: Lips and dental arch	144
3. Upper lip line in relation to the gingiva in the smile	151
4. Characteristics of a harmonious gingival margin	154
5. Incisal edge contours	160
6. Symmetry	169
7. Optical characteristics of the dental arch	176
2.4 COLOR AND TOOTH SHADE	197
1. Light and color	197
2. The sample	199
2.5 OPTICAL PROPERTIES OF TOOTH SUBSTANCE	215
1. Translucency of dental tissue	216
2. Scattering	217
3. The Kubelka-Munk two-flux theory	221
4. Translucency parameter, TP	225
5. Direction of dispersion	225
6. Opalescence of the enamel	230
7. Incisal halo	230
8. Multiple dispersion in turbid media	237
9. Drying out and water saturation of tooth enamel	240
10. Diffraction	242
11. Refraction of light – refractive index	243
12. Double refraction (birefringence)	244
13. Light-guiding effects	245
14. Polarization	249
15. Diffuse and specular reflection	250
16. Fluorescence	259
17. Special characteristics	264
18. Cracks in the enamel	266
