

Table of contents

I Basic principles		
1 General	3	2.5 School medical examination 46
1.1 What do the »straight-trainers« do with crooked children? – or: What is pediatric orthopaedics?	4	2.5.1 Objectives from the orthopaedic standpoint . . . 46
1.1.1 Why do parents bring their children for an orthopaedic consultation? 5		2.5.2 Equipment for the school medical examination . 48
1.1.2 The pediatric orthopaedic consultation 6		2.5.3 At what age should school medical examinations take place? 48
1.1.3 What orthopaedic problems are encountered in children and adolescents? 19		3 Development of the musculoskeletal system 49
1.1.4 Why, despite all the risks, is it still such a pleasure to work in the field of pediatric orthopaedics? . . 20		3.1 Growth 51
1.2 Orthoses, prostheses, theories and inventive individuals – a historical review 21		3.1.1 Skeletal growth 51
1.2.1 Orthopaedic diseases through the ages 22		3.2 Physical development 54
1.2.2 Conservative treatment 23		3.2.1 Stages of life 54
1.2.3 Surgical treatment 25		3.2.2 Linear development 54
1.2.4 Principles – Theories – Biomechanics 26		3.2.3 Weight 56
1.3 Changing patterns of pediatric orthopaedic diseases – Developments, trends 27		3.2.4 Skeletal age 58
1.3.1 Achievements of recent decades 27		3.2.5 Puberty 58
1.3.2 Unsolved problems 28		3.3 Biomechanics of the growing locomotor apparatus 60
1.3.3 Development of morbidity 28		3.3.1 Principles 60
1.3.4 Future 30		3.3.2 Terms 61
2 Diagnosis 33		3.3.3 Modeling 62
2.1 General examination technique 35		3.3.4 Measuring methods 63
2.1.1 Medical history 35		3.3.5 Research areas 64
2.1.2 Instruments, measuring instruments 36		3.4 The loading capacity of the musculoskeletal system 64
2.1.3 Measuring the range of motion by the neutral-0 method 36		3.4.1 Experimental investigations 64
2.1.4 Orthopaedic examination technique 37		3.4.2 Clinical observations 66
2.2 Neurological examination 38		3.4.3 Conclusions 68
<i>R. Brunner</i>		
2.2.1 Examination procedure 38		II Diseases and injuries by site
2.2.2 Symptoms 39		
2.2.3 Assessment of motor function according to the Gross Motor Function Classification System (GMFCS) 40		4 Spine, trunk 73
2.3 Gait analysis 40		<i>F. Hefti, C. Hasler</i>
<i>R. Brunner</i>		4.1 Examination of the back 76
2.3.1 The normal gait 40		4.1.1 History 76
2.3.2 Clinical gait analysis 41		4.1.2 Inspection 76
2.3.3 Instrumental gait analysis 42		4.1.3 Examination of mobility 78
2.4 Imaging diagnostics 43		4.1.4 Palpation 80
2.4.1 Imaging techniques 43		4.1.5 Neurological examination 81
2.4.2 Radiation protection 45		4.2 Radiography of the spine 83
		4.3 Can the »nut croissant« be straightened out by admonitions? – or: To what extent is a bent back acceptable? – Postural problems in adolescents 85
		4.3.1 The back – a mirror of the soul? 85

4.3.2	Economic significance of back pain	86	4.14.1	General aspects	177
4.3.3	Evolution of upright walking and posture	86	4.14.2	Typical features of the principal benign tumor types	178
4.3.4	Postural development in children	87	4.14.3	Typical features of the principal malignant tumors	181
4.3.5	Posture types in the adolescent	88	4.14.4	Intraspinal tumors and neoplasms associated with congenital anomalies	183
4.3.6	Pathological significance of poor posture	90	4.15	Backs that are as straight as candles frequently cause severe pain – differential diagnosis of back pain	185
4.3.7	Therapeutic options	91	4.16	Indications for imaging investigations for the spine	190
4.4	Idiopathic scolioses	93	4.17	Indications for physical therapy for back problems	191
4.5	Scheuermann's disease	117	5	Pelvis, hips and thighs	193
4.6	Spondylolysis and spondylolisthesis	124	5.1	Examination of hips	195
4.7	Congenital malformations of the spine	132	5.2	Radiographic techniques	198
4.8	Congenital muscular torticollis	143	5.3	Biomechanics of the hip	201
4.9	Thoracic deformities	146	5.3.1	Morphology and development of the normal hip	202
4.9.1	Funnel chest	146	5.3.2	Static aspects	204
4.9.2	Keeled chest	148	5.3.3	Dynamic aspects	210
4.9.3	Atypical thoracic deformities	149	5.4	Developmental dysplasia and congenital dislocation of the hip	211
4.9.4	Syndromes with short ribs	149	5.5	Legg-Calvé-Perthes disease (LCPD)	236
4.10	Neuromuscular spinal deformities	150	5.6	Slipped capital femoral epiphysis (SCFE)	250
	<i>F. Hefti, R. Brunner, C. Hasler</i>		5.7	Congenital malformations of the pelvis, hip and thigh	259
4.10.1	Predominantly spastic paralyses	150	5.7.1	Classification	259
4.10.2	Predominantly flaccid paralyses	155	5.7.2	Localized disorders	259
4.10.3	Myelomeningocele	155	5.7.3	Changes in the pelvis and hips in systemic illnesses	267
4.10.4	Muscular dystrophies	157	5.8	Neuromuscular hip disorders	272
4.11	Spinal deformities in systemic diseases	158		<i>R. Brunner</i>	
4.11.1	Neurofibromatosis	159	5.8.1	Primarily spastic disorders	272
4.11.2	Marfan syndrome	160	5.8.2	Primarily flaccid locomotor disorders (myelomeningocele, paraplegias)	281
4.11.3	Osteogenesis imperfecta	160	5.9	Fractures of the pelvis, hip and thigh	285
4.11.4	Ehlers-Danlos syndrome	162		<i>C. Hasler</i>	
4.11.5	Apert syndrome	162	5.9.1	Pelvic fractures	285
4.11.6	Fibrodysplasia ossificans progressiva	162	5.9.2	Proximal femoral fractures	287
4.11.7	Mucopolysaccharidoses	162	5.9.3	Diaphyseal femoral fractures	291
4.11.8	Achondroplasia	163	5.10	Transient synovitis of the hip	295
4.11.9	Diastrophic dysplasia	163	5.11	Infections of the hip and the femur	297
4.11.10	Spondyloepiphyseal dysplasia	163	5.11.1	Septic arthritis of the hip	297
4.11.11	Larsen syndrome	164	5.11.2	Osteomyelitis of the thigh	301
4.11.12	Kniest syndrome	164	5.12	Rheumatoid arthritis of the hip	302
4.11.13	Osteopetrosis	164	5.13	Tumors of the pelvis, proximal femur and femoral shaft	305
4.11.14	Chromosomal anomalies	165	5.14	Differential diagnosis of hip pain	315
4.11.15	Klippel-Trenaunay-Weber syndrome	165	5.15	Differential diagnosis of restricted hip movement	316
4.11.16	Fibrous dysplasia	165	5.16	Indications for imaging procedures for the hip	317
4.11.17	Prader-Willi syndrome	165	5.17	Indications for physical therapy in hip disorders	318
4.11.18	Williams syndrome	167			
4.11.19	Goldenhar syndrome	167			
4.11.20	Prune-belly syndrome	167			
4.11.21	Overview of spinal deformities in systemic diseases	167			
4.12	Spinal injuries	168			
4.13	Inflammatory conditions of the spine	173			
4.13.1	Spondylitis, Spondylodiscitis	173			
4.13.2	Spinal changes associated with juvenile rheumatoid arthritis	175			
4.13.3	Juvenile ankylosing spondylitis	176			
4.13.4	Intervertebral disk calcification	176			
4.14	Tumors of the spine	177			

6	Knee and lower leg	319	7	Foot and ankle	415
6.1	Examination of the knee	321	7.1	Examination of the foot and ankle	417
6.2	Radiographic techniques	326	7.1.1	Infants	417
6.3	Knee pain today – sports invalid tomorrow? – Pain syndromes of the knee and lower leg	328	7.1.2	Children and adolescents	418
6.3.1	»Growing pains«	328	7.2	Radiographic techniques for the foot and ankle	423
6.3.2	Anterior knee pain	329	7.3	Congenital clubfoot	425
6.3.3	Osgood-Schlatter disease	331	7.4	Congenital flatfoot (vertical talus)	441
6.3.4	Sinding-Larsen-Johansson disease	332	7.5	Other congenital anomalies of the foot	445
6.3.5	Bipartite patella	332	7.5.1	Accessory ossification centers, talus partitus	445
6.3.6	Medial shelf syndrome	333	7.5.2	Tarsal coalition	448
6.3.7	Stress fractures of the lower leg	334	7.5.3	Congenital ball-and-socket ankle joint	450
6.4	Osteochondritis dissecans	336	7.5.4	Polydactyly	451
6.5	Dislocation of the patella	343	7.5.5	Syndactyly	453
6.6	Congenital deformities of the knee and lower leg	353	7.5.6	Split foot (lobster claw foot)	453
6.6.1	Classification	353	7.5.7	Congenital hallux varus	454
6.6.2	Fibular deficiency (Fibular hypoplasia / aplasia / postaxial dysplasia)	353	7.5.8	Macrodactyly	455
6.6.3	Tibial deficiency (preaxial dysplasia) (including tibiofibular diastasis)	357	7.5.9	Brachymetatarsia	455
6.6.4	Congenital dislocation of the knee	358	7.5.10	Accessory muscles	456
6.6.5	Congenital absence of cruciate ligaments	359	7.5.11	Foot abnormalities with longitudinal malformations	456
6.6.6	Congenital »pseudarthrosis« of the tibia or tibial dysplasia	360	7.5.12	Foot abnormalities in systemic disorders	458
6.6.7	Congenital posteromedial bowing of the tibia	364	7.6	Do skewfeet stop Cinderella from turning into a princess? or: Should one treat metatarsus adductus?	460
6.6.8	Discoïd meniscus	365	7.7	Flatfoot Indians – which ones must be treated so that they can later become chiefs? – or: How do we distinguish between flat valgus foot and flexible flatfoot?	463
6.6.9	Changes to the knee and lower leg in systemic disorders	367	7.7.1	Physiological flat valgus foot	464
6.7	Neuromuscular disorders of the knee and lower leg	369	7.7.2	Flexible flatfoot	465
	<i>R. Brunner</i>		7.8	Juvenile hallux valgus	474
6.7.1	Primarily spastic paralyses	369	7.9	Does one have to walk one's feet off before the cause of foot pain can be established? – or: Osteochondroses and other painful problems of the feet	480
6.7.2	Primarily flaccid paralyses of the knee	375	7.9.1	Köhler's bone disease (of the tarsal navicular)	480
6.7.3	Muscular dystrophy	377	7.9.2	Freiberg's disease (infarction)	481
6.8	Meniscal and ligamentous lesions	378	7.9.3	Other rare forms of osteonecrosis on the forefoot	482
6.9	Fractures of the knee and lower leg	384	7.9.4	Osteochondritis dissecans of the talus	482
	<i>C. Hasler</i>		7.9.5	Calcaneal apophysitis (Sever's disease)	484
6.9.1	Fractures of the distal femur	384	7.9.6	Other types of heel pain	484
6.9.2	Patellar fractures	386	7.9.7	Fatigue fractures	485
6.9.3	Fractures of the proximal tibia	388	7.10	Neuromuscular disorders of the ankle and foot	486
6.9.4	Fractures of the tibial diaphysis	393		<i>R. Brunner</i>	
6.10	Infections of the knee and lower leg	396	7.10.1	Primarily spastic paralyses	487
6.10.1	Septic arthritis of the knee	396	7.10.2	Primarily flaccid paralyses	495
6.10.2	Infections in the lower leg	398	7.11	Ankle and foot injuries	499
6.11	Juvenile rheumatoid arthritis of the knee	399		<i>C. Hasler</i>	
6.12	Tumors in the knee area	401	7.11.1	Fractures of the distal tibia	499
6.13	Knee contractures	409	7.11.2	Syndesmotoc disruptions and fibular epiphyseal separations	503
6.14	Differential diagnosis of knee pain	412	7.11.3	Fibulotalar ligament lesions	503
6.15	Indications for imaging procedures for the knee	413	7.11.4	Fractures of the foot	504
6.16	Indications for physical therapy in knee disorders	413			

7.12	Infections of the foot and ankle	507
7.13	Tumors of the foot and ankle	508
7.14	Differential diagnosis of foot pain	513
8	Upper extremities	515
8.1	Examination of the upper extremities	517
8.1.1	Shoulder girdle and upper arm	517
8.1.2	Elbow and forearm	520
8.1.3	Hand	521
8.2	Radiographic technique for the upper extremities	524
8.3	Congenital deformities of the upper extremities	528
8.3.1	General aspects – classification	528
8.3.2	Transverse deficiencies (Ia)	532
8.3.3	Longitudinal defects (Ib)	534
8.3.4	Differentiation defects (II)	536
8.3.5	Polydactyly (III)	540
8.3.6	Macroductyly (IV)	541
8.3.7	Hypoplasia (V)	541
8.3.8	Ring constriction syndrome (congenital band syndrome) (VI)	541
8.3.9	Sprengel's deformity	542
8.3.10	Congenital clavicular pseudarthrosis	543
8.3.11	Congenital radial head dislocation	544
8.3.12	Generalized skeletal abnormalities (VII)	544
8.4	Dislocations of the shoulder	546
8.5	Growth disturbances of the upper extremities	550
8.5.1	Panner's disease	550
8.5.2	Osteochondritis dissecans of the capitellum	551
8.5.3	Lunatomalacia	551
8.6	Neuromuscular disorders of the upper extremity	552
	<i>R. Brunner</i>	
8.6.1	Primarily spastic paralyses	552
8.6.2	Primarily flaccid paralyses	557
8.7	Fractures of the upper extremities	561
	<i>C. Hasler</i>	
8.7.1	Scapular fractures	561
8.7.2	Clavicular fractures	561
8.7.3	Proximal humeral fractures	562
8.7.4	Humeral shaft fractures	564
8.7.5	Elbow fractures	566
8.7.6	Supracondylar humeral fractures	567
8.7.7	Epicondylar humeral fractures	570
8.7.8	Transcondylar humeral fractures	572
8.7.9	Radial head and neck fractures	574
8.7.10	Olecranon fractures	576
8.7.11	Elbow dislocations	576
8.7.12	Radial head dislocations (Monteggia lesions)	579
8.7.13	Forearm shaft fractures	581
8.7.14	Distal forearm fractures	584
8.7.15	Fractures of the carpal bones	586
8.7.16	Fractures of the metacarpals and phalanges	587
8.8	Tumors of the upper extremities	590

III Systematic aspects of musculoskeletal disorders

9	Traumatology – basic principles	599
	<i>C. Hasler</i>	
9.1	Introduction	601
9.1.1	Epidemiology	601
9.2	Communication with the parents and patients	602
9.3	Diagnosis	603
9.3.1	Clinical findings	603
9.3.2	Imaging investigations	603
9.3.3	Fracture classifications	604
9.4	Special injuries	605
9.4.1	Birth traumas	605
9.4.2	The abused child	606
9.4.3	Pathological fractures	607
	<i>F. Hefti</i>	
9.4.4	Stress fractures	608
	<i>F. Hefti</i>	
9.4.5	Sports injuries	609
9.5	Therapeutic principles	610
9.5.1	Timing of treatment	610
9.5.2	Conservative treatment	611
9.5.3	Surgical treatment	612
9.6	Follow-up management	613
9.6.1	Physical therapy	613
9.6.2	Resumption of sports	613
9.6.3	Metal removal	614
9.7	Follow-up controls	614
9.7.1	Consolidation	614
9.7.2	Growth disorders	614
9.7.3	Deformities	614
9.7.4	Mobility	614
9.7.5	Neurological disorders	615
9.8	Prognosis	615
9.8.1	Spontaneous corrections	615
9.8.2	Growth disorders	615
9.8.3	Posttraumatic deformities	617
10	Axes and lengths	619
	<i>F. Hefti, C. Hasler, A. Krieg</i>	
10.1	Are children twisted when they have an intoeing gait or warped if they are knock-kneed or bow-legged?	620
10.2	Do children go »off the straight and narrow« when the pelvis is oblique? – or: Causes and need for treatment of pelvic obliquity?	631
10.3	The limping child	644

11	Infections	647	13.6	Therapeutic strategies for bone and soft tissue tumors	725
	<i>F. Hefti, G. Jundt</i>				
11.1	Osteomyelitis	648	13.6.1	Introduction	725
11.1.1	Acute hematogenous osteomyelitis	648	13.6.2	Resection	726
11.1.2	(Primary) chronic osteomyelitis	651	13.6.3	Treatment of benign and locally aggressive tumors	728
11.1.3	Specific osteomyelitis (tuberculosis)	654	13.6.4	Treatment of low-grade malignant tumors	729
11.1.4	Exogenous osteomyelitis	655	13.6.5	Treatment of medium grade malignant tumors	729
11.2	Septic (suppurative) arthritis	656	13.6.6	Treatment of high-grade malignant tumors	729
12	Juvenile rheumatoid arthritis	661	13.6.7	General aspects of the surgical treatment of malignant tumors	732
13	Tumors	667	13.6.8	Bridging options	732
	<i>F. Hefti, G. Jundt</i>		13.6.9	Specific aspects of resection and the bridging of tumors close to the physes during growth	737
13.1	Basic aspects of tumor diagnosis	671	13.6.10	Treatment of bone and soft tissue tumors – a multidisciplinary task	740
	<i>F. Hefti, G. Jundt</i>		14	Hereditary diseases	743
13.1.1	Clinical considerations	671	14.1	Of beggars and artists and clues in the quest for appropriate classification – Introduction	747
13.1.2	Imaging procedures	673	14.2	Classified skeletal dysplasias	755
13.1.3	Biopsy	678	14.2.1	Achondroplasia group	755
13.1.4	Pathological anatomy, histology	680	14.2.2	Type II collagen group	758
13.1.5	Tumor staging	681	14.2.3	Typ XI collagen group	760
13.1.6	Evaluation and treatment of musculoskeletal tumors in the interdisciplinary tumor center	682	14.2.4	Sulfation disorders	760
13.2	Benign bone tumors and tumor-like lesions	683	14.2.5	Perlecan group	762
	<i>F. Hefti, G. Jundt</i>		14.2.6	Aggrecan group	762
13.2.1	Bone-forming tumors	683	14.2.7	Filamin group and related disorders	762
13.2.2	Cartilage-forming tumors	685	14.2.8	TRPV4 group	763
13.2.3	Connective tissue tumors (benign fibrous histiocytoma, desmoplastic fibroma)	690	14.2.9	Short-rib dysplasias	764
13.2.4	Vascular tumors	691	14.2.10	Multiple epiphyseal dysplasia and pseudo-achondroplasia	766
13.2.5	Nerve tissue tumors	693	14.2.11	Metaphyseal dysplasia	768
13.2.6	Giant cell tumor	693	14.2.12	Spondylometaphyseal dysplasia	768
13.2.7	Tumor-like lesions	695	14.2.13	Spondyloepi-(meta)-physeal dysplasias	768
13.3	Malignant bone tumors	704	14.2.14	Severe spondylodysplastic dysplasias	769
	<i>F. Hefti, G. Jundt</i>		14.2.15	Acromelic dysplasias	769
13.3.1	Bone matrix-forming tumors (osteosarcomas)	704	14.2.16	Acromesomelic dysplasias	769
13.3.2	Cartilage-forming tumors (chondrosarcomas)	708	14.2.17	Mesomelic and rhizo-mesomelic dysplasias	769
13.3.3	Tumors of the medullary cavity (Ewing sarcoma, primitive neuroectodermal tumor: PNET)	710	14.2.18	Dysplasias with bent bones	770
13.3.4	Fibrohistiocytic tumors (fibrosarcoma, malignant fibrous histiocytoma)	712	14.2.19	Slender bone dysplasia group	770
13.3.5	Malignant vascular tumors	713	14.2.20	Dysplasias with multiple joint dislocations	770
13.3.6	Other malignant bone tumors	713	14.2.21	Chondrodysplasia calcificans punctata group	770
13.4	Benign and locally aggressive soft tissue tumors	716	14.2.22	Neonatal osteosclerotic dysplasias	771
	<i>G. Jundt, F. Hefti</i>		14.2.23	Increased bone density without modification of shape	772
13.4.1	Connective tissue tumors	716	14.2.24	Increased bone density with metaphyseal and/or diaphyseal involvement	775
13.4.2	Fatty tissue tumors	719	14.2.25	Dysplasias with decreased bone density	776
13.4.3	Vascular tumors	720	14.2.26	Dysplasias with abnormal mineralization	781
13.4.4	Tumor-like lesions	720	14.2.27	Dysostosis multiplex group (lysosomal storage diseases)	784
13.5	Malignant soft tissue tumors	721	14.2.28	Osteolyses	786
13.5.1	Rhabdomyosarcoma and rhabdomyosarcoma-like tumors	721			
13.5.2	Non-rhabdomyosarcoma-like tumors	724			

14.2.29	Disorganized development of cartilaginous and fibrous components of the skeleton	786	15.2.1	Orthoses	843
14.2.30	Overgrowth syndromes	795	15.2.2	Mobilization aids	851
14.2.31	Genetic inflammatory/rheumatoid-like osteoarthropathies	799	15.3 Cerebral lesions	855	
14.2.32	Dysplasias with predominant involvement of flat bones	799	<i>R. Brunner</i>		
14.2.33	Craniosynostosis syndromes	800	15.3.1	Cerebral palsy	855
14.2.34	Dysostoses with predominant craniofacial involvement	801	15.3.2	Brain damage at a later age	859
14.2.35	Dysostoses with predominant vertebral involvement	801	15.4 Spinal cord lesions	860	
14.2.36	Patellar dysostoses	802	<i>R. Brunner</i>		
14.2.37	Brachydactylies	802	15.4.1	Myelomeningocele	860
14.2.38	Limb hypoplasia/reduction defects group	804	15.4.2	Spinal cord injuries	864
14.2.39	Polydactyly/syndactyly/triphalangism group	805	15.4.3	Tethered cord	864
14.2.40	Defects in joint formation and synostoses group	805	15.4.4	Other spinal cord lesions	865
14.3 Chromosomal abnormalities	809		15.4.5	Poliomyelitis	865
14.3.1	Down syndrome	809	15.5 Nerve lesions outside the central nervous system	867	
14.3.2	Trisomy 8	811	<i>R. Brunner</i>		
14.3.3	Trisomy 5 (cri-du-chat syndrome)	811	15.6 Muscle disorders	869	
14.3.4	Trisomy 18	812	<i>R. Brunner</i>		
14.3.5	Turner syndrome	812	15.6.1	Duchenne muscular dystrophy	871
14.3.6	Klinefelter syndrome (XXY syndrome)	812	15.6.2	Becker muscular dystrophy	873
14.3.7	Fragile X syndrome	812	15.6.3	Other forms of muscular dystrophy	873
14.4 Syndromes with neuromuscular abnormalities	812		15.6.4	Spinal muscular atrophy	875
<i>R. Brunner</i>			15.6.5	Hereditary motor and sensory neuropathy (HMSN)	876
14.4.1	Arthrogryposis	812	15.6.6	Myotonia congenita (Thomsen disease)	876
14.4.2	Pterygium syndromes	816	15.6.7	Myasthenia gravis	876
14.4.3	Moebius syndrome	816			
14.4.4	Cornelia-de-Lange syndrome	817			
14.4.5	Pierre-Robin syndrome	817			
14.4.6	Williams-Beuren syndrome	817			
14.4.7	Prader-Willi-Labhard syndrome	817			
14.4.8	Rett syndrome	817			
14.4.9	Dandy-Walker syndrome	818			
14.4.10	CIPA syndrome (congenital insensitivity to pain and anhidrosis)	818			
14.5 Various syndromes with orthopaedic relevance	819				
14.5.1	Gaucher disease	819			
14.5.2	Klippel-Trenaunay-Weber syndrome	820			
14.5.3	Homocystinuria	821			
14.5.4	Ehlers-Danlos syndrome	821			
14.5.5	Silver-Russell syndrome	823			
14.5.6	Hemophilia	824			
14.5.7	Hypothyroidism	826			
15 Neuro-orthopaedics	829				
<i>R. Brunner</i>					
15.1 Basic aspects of neuromuscular diseases	831				
<i>R. Brunner</i>					
15.2 Orthopaedic appliances	843				
<i>R. Brunner</i>
