Dedication *V*

Preface *XIX*

1	Introduction	<i>1</i>
1.1	Computational Physics and Computational Science	<i>1</i>
1.2	This Book's Subjects	<i>3</i>
1.3	This Book's Problems	<i>4</i>
1.4	This Book's Language: The Python Ecosystem	<i>8</i>
1.4.1	Python Packages (Libraries)	<i>9</i>
1.4.2	This Book's Packages	<i>10</i>
1.4.3	The Easy Way: Python Distributions (Package Collections)	<i>12</i>
1.5	Python's Visualization Tools	<i>13</i>
1.5.1	Visual (VPython)'s 2D Plots	<i>14</i>
1.5.2	VPython's Animations	<i>17</i>
1.5.3	Matplotlib's 2D Plots	<i>17</i>
1.5.4	Matplotlib's 3D Surface Plots	<i>22</i>
1.5.5	Matplotlib's Animations	<i>24</i>
1.5.6	Mayavi's Visualizations Beyond Plotting	<i>26</i>
1.6	Plotting Exercises	<i>30</i>
1.7	Python's Algebraic Tools	<i>31</i>
2	Computing Software Basics	<i>33</i>
2.1	Making Computers Obey	<i>33</i>
2.2	Programming Warmup	<i>35</i>
2.2.1	Structured and Reproducible Program Design	<i>36</i>
2.2.2	Shells, Editors, and Execution	<i>37</i>
2.3	Python I/O	<i>39</i>
2.4	Computer Number Representations (Theory)	<i>40</i>
2.4.1	IEEE Floating-Point Numbers	<i>41</i>
2.4.2	Python and the IEEE 754 Standard	<i>47</i>
2.4.3	Over and Underflow Exercises	<i>48</i>
2.4.4	Machine Precision (Model)	<i>49</i>

2.4.5	Experiment: Your Machine's Precision	50
2.5	Problem: Summing Series	51
2.5.1	Numerical Summation (Method)	51
2.5.2	Implementation and Assessment	52
3	Errors and Uncertainties in Computations	53
3.1	Types of Errors (Theory)	53
3.1.1	Model for Disaster: Subtractive Cancellation	55
3.1.2	Subtractive Cancellation Exercises	56
3.1.3	Round-off Errors	57
3.1.4	Round-off Error Accumulation	58
3.2	Error in Bessel Functions (Problem)	58
3.2.1	Numerical Recursion (Method)	59
3.2.2	Implementation and Assessment: Recursion Relations	61
3.3	Experimental Error Investigation	62
3.3.1	Error Assessment	65
4	Monte Carlo: Randomness, Walks, and Decays	69
4.1	Deterministic Randomness	69
4.2	Random Sequences (Theory)	69
4.2.1	Random-Number Generation (Algorithm)	70
4.2.2	Implementation: Random Sequences	72
4.2.3	Assessing Randomness and Uniformity	73
4.3	Random Walks (Problem)	75
4.3.1	Random-Walk Simulation	76
4.3.2	Implementation: Random Walk	77
4.4	Extension: Protein Folding and Self-Avoiding Random Walks	79
4.5	Spontaneous Decay (Problem)	80
4.5.1	Discrete Decay (Model)	81
4.5.2	Continuous Decay (Model)	82
4.5.3	Decay Simulation with Geiger Counter Sound	82
4.6	Decay Implementation and Visualization	84
5	Differentiation and Integration	85
5.1	Differentiation	85
5.2	Forward Difference (Algorithm)	86
5.3	Central Difference (Algorithm)	87
5.4	Extrapolated Difference (Algorithm)	87
5.5	Error Assessment	88
5.6	Second Derivatives (Problem)	90
5.6.1	Second-Derivative Assessment	90
5.7	Integration	91
5.8	Quadrature as Box Counting (Math)	91
5.9	Algorithm: Trapezoid Rule	93
5.10	Algorithm: Simpson's Rule	94

- 5.11 Integration Error (Assessment) 96
- 5.12 Algorithm: Gaussian Quadrature 97
- 5.12.1 Mapping Integration Points 98
- 5.12.2 Gaussian Points Derivation 99
- 5.12.3 Integration Error Assessment 100
- 5.13 Higher Order Rules (Algorithm) 103
- 5.14 Monte Carlo Integration by Stone Throwing (Problem) 104
- 5.14.1 Stone Throwing Implementation 104
- 5.15 Mean Value Integration (Theory and Math) 105
- 5.16 Integration Exercises 106
- 5.17 Multidimensional Monte Carlo Integration (Problem) 108
- 5.17.1 Multi Dimension Integration Error Assessment 109
- 5.17.2 Implementation: 10D Monte Carlo Integration 110
- 5.18 Integrating Rapidly Varying Functions (Problem) 110
- 5.19 Variance Reduction (Method) 110
- 5.20 Importance Sampling (Method) 111
- 5.21 von Neumann Rejection (Method) 111
- 5.21.1 Simple Random Gaussian Distribution 113
- 5.22 Nonuniform Assessment \odot 113
- 5.22.1 Implementation \odot 114

- 6 Matrix Computing 117**
- 6.1 Problem 3: N-D Newton–Raphson; Two Masses on a String 117
- 6.1.1 Theory: Statics 118
- 6.1.2 Algorithm: Multidimensional Searching 119
- 6.2 Why Matrix Computing? 122
- 6.3 Classes of Matrix Problems (Math) 122
- 6.3.1 Practical Matrix Computing 124
- 6.4 Python Lists as Arrays 126
- 6.5 Numerical Python (NumPy) Arrays 127
- 6.5.1 NumPy’s linalg Package 132
- 6.6 Exercise: Testing Matrix Programs 134
- 6.6.1 Matrix Solution of the String Problem 137
- 6.6.2 Explorations 139

- 7 Trial-and-Error Searching and Data Fitting 141**
- 7.1 Problem 1: A Search for Quantum States in a Box 141
- 7.2 Algorithm: Trial-and-Error Roots via Bisection 142
- 7.2.1 Implementation: Bisection Algorithm 144
- 7.3 Improved Algorithm: Newton–Raphson Searching 145
- 7.3.1 Newton–Raphson with Backtracking 147
- 7.3.2 Implementation: Newton–Raphson Algorithm 148
- 7.4 Problem 2: Temperature Dependence of Magnetization 148
- 7.4.1 Searching Exercise 150
- 7.5 Problem 3: Fitting An Experimental Spectrum 150

7.5.1	Lagrange Implementation, Assessment	152
7.5.2	Cubic Spline Interpolation (Method)	153
7.6	Problem 4: Fitting Exponential Decay	156
7.7	Least-Squares Fitting (Theory)	158
7.7.1	Least-Squares Fitting: Theory and Implementation	160
7.8	Exercises: Fitting Exponential Decay, Heat Flow and Hubble's Law	162
7.8.1	Linear Quadratic Fit	164
7.8.2	Problem 5: Nonlinear Fit to a Breit–Wigner	167
8	Solving Differential Equations: Nonlinear Oscillations	171
8.1	Free Nonlinear Oscillations	171
8.2	Nonlinear Oscillators (Models)	171
8.3	Types of Differential Equations (Math)	173
8.4	Dynamic Form for ODEs (Theory)	175
8.5	ODE Algorithms	177
8.5.1	Euler's Rule	177
8.6	Runge–Kutta Rule	178
8.7	Adams–Bashforth–Moulton Predictor–Corrector Rule	183
8.7.1	Assessment: rk2 vs. rk4 vs. rk45	185
8.8	Solution for Nonlinear Oscillations (Assessment)	187
8.8.1	Precision Assessment: Energy Conservation	188
8.9	Extensions: Nonlinear Resonances, Beats, Friction	189
8.9.1	Friction (Model)	189
8.9.2	Resonances and Beats: Model, Implementation	190
8.10	Extension: Time-Dependent Forces	190
9	ODE Applications: Eigenvalues, Scattering, and Projectiles	193
9.1	Problem: Quantum Eigenvalues in Arbitrary Potential	193
9.1.1	Model: Nucleon in a Box	194
9.2	Algorithms: Eigenvalues via ODE Solver + Search	195
9.2.1	Numerov Algorithm for Schrödinger ODE \odot	197
9.2.2	Implementation: Eigenvalues via ODE Solver + Bisection Algorithm	200
9.3	Explorations	203
9.4	Problem: Classical Chaotic Scattering	203
9.4.1	Model and Theory	204
9.4.2	Implementation	206
9.4.3	Assessment	207
9.5	Problem: Balls Falling Out of the Sky	208
9.6	Theory: Projectile Motion with Drag	208
9.6.1	Simultaneous Second-Order ODEs	209
9.6.2	Assessment	210
9.7	Exercises: 2- and 3-Body Planet Orbits and Chaotic Weather	211
10	High-Performance Hardware and Parallel Computers	215
10.1	High-Performance Computers	215

10.2	Memory Hierarchy	216
10.3	The Central Processing Unit	219
10.4	CPU Design: Reduced Instruction Set Processors	220
10.5	CPU Design: Multiple-Core Processors	221
10.6	CPU Design: Vector Processors	222
10.7	Introduction to Parallel Computing	223
10.8	Parallel Semantics (Theory)	224
10.9	Distributed Memory Programming	226
10.10	Parallel Performance	227
10.10.1	Communication Overhead	229
10.11	Parallelization Strategies	230
10.12	Practical Aspects of MIMD Message Passing	231
10.12.1	High-Level View of Message Passing	233
10.12.2	Message Passing Example and Exercise	234
10.13	Scalability	236
10.13.1	Scalability Exercises	238
10.14	Data Parallelism and Domain Decomposition	239
10.14.1	Domain Decomposition Exercises	242
10.15	Example: The IBM Blue Gene Supercomputers	243
10.16	Exascale Computing via Multinode-Multicore GPUs	245
11	Applied HPC: Optimization, Tuning, and GPU Programming	247
11.1	General Program Optimization	247
11.1.1	Programming for Virtual Memory (Method)	248
11.1.2	Optimization Exercises	249
11.2	Optimized Matrix Programming with NumPy	251
11.2.1	NumPy Optimization Exercises	254
11.3	Empirical Performance of Hardware	254
11.3.1	Racing Python vs. Fortran/C	255
11.4	Programming for the Data Cache (Method)	262
11.4.1	Exercise 1: Cache Misses	264
11.4.2	Exercise 2: Cache Flow	264
11.4.3	Exercise 3: Large-Matrix Multiplication	265
11.5	Graphical Processing Units for High Performance Computing	266
11.5.1	The GPU Card	267
11.6	Practical Tips for Multicore and GPU Programming	267
11.6.1	CUDA Memory Usage	270
11.6.2	CUDA Programming	271
12	Fourier Analysis: Signals and Filters	275
12.1	Fourier Analysis of Nonlinear Oscillations	275
12.2	Fourier Series (Math)	276
12.2.1	Examples: Sawtooth and Half-Wave Functions	278
12.3	Exercise: Summation of Fourier Series	279
12.4	Fourier Transforms (Theory)	279

- 12.5 The Discrete Fourier Transform 281
- 12.5.1 Aliasing (Assessment) 285
- 12.5.2 Fourier Series DFT (Example) 287
- 12.5.3 Assessments 288
- 12.5.4 Nonperiodic Function DFT (Exploration) 290
- 12.6 Filtering Noisy Signals 290
- 12.7 Noise Reduction via Autocorrelation (Theory) 290
- 12.7.1 Autocorrelation Function Exercises 293
- 12.8 Filtering with Transforms (Theory) 294
- 12.8.1 Digital Filters: Windowed Sinc Filters (Exploration) ⊙ 296
- 12.9 The Fast Fourier Transform Algorithm ⊙ 299
- 12.9.1 Bit Reversal 301
- 12.10 FFT Implementation 303
- 12.11 FFT Assessment 304

- 13 Wavelet and Principal Components Analyses: Nonstationary Signals and Data Compression 307**
- 13.1 Problem: Spectral Analysis of Nonstationary Signals 307
- 13.2 Wavelet Basics 307
- 13.3 Wave Packets and Uncertainty Principle (Theory) 309
- 13.3.1 Wave Packet Assessment 311
- 13.4 Short-Time Fourier Transforms (Math) 311
- 13.5 The Wavelet Transform 313
- 13.5.1 Generating Wavelet Basis Functions 313
- 13.5.2 Continuous Wavelet Transform Implementation 316
- 13.6 Discrete Wavelet Transforms, Multiresolution Analysis ⊙ 317
- 13.6.1 Pyramid Scheme Implementation ⊙ 323
- 13.6.2 Daubechies Wavelets via Filtering 327
- 13.6.3 DWT Implementation and Exercise 330
- 13.7 Principal Components Analysis 332
- 13.7.1 Demonstration of Principal Component Analysis 334
- 13.7.2 PCA Exercises 337

- 14 Nonlinear Population Dynamics 339**
- 14.1 Bug Population Dynamics 339
- 14.2 The Logistic Map (Model) 339
- 14.3 Properties of Nonlinear Maps (Theory and Exercise) 341
- 14.3.1 Fixed Points 342
- 14.3.2 Period Doubling, Attractors 343
- 14.4 Mapping Implementation 344
- 14.5 Bifurcation Diagram (Assessment) 345
- 14.5.1 Bifurcation Diagram Implementation 346
- 14.5.2 Visualization Algorithm: Binning 347
- 14.5.3 Feigenbaum Constants (Exploration) 348
- 14.6 Logistic Map Random Numbers (Exploration) ⊙ 348

- 14.7 Other Maps (Exploration) 348
- 14.8 Signals of Chaos: Lyapunov Coefficient and Shannon Entropy \odot 349
- 14.9 Coupled Predator–Prey Models 353
- 14.10 Lotka–Volterra Model 354
- 14.10.1 Lotka–Volterra Assessment 356
- 14.11 Predator–Prey Chaos 356
- 14.11.1 Exercises 359
- 14.11.2 LVM with Prey Limit 359
- 14.11.3 LVM with Predation Efficiency 360
- 14.11.4 LVM Implementation and Assessment 361
- 14.11.5 Two Predators, One Prey (Exploration) 362

- 15 Continuous Nonlinear Dynamics 363**
- 15.1 Chaotic Pendulum 363
- 15.1.1 Free Pendulum Oscillations 364
- 15.1.2 Solution as Elliptic Integrals 365
- 15.1.3 Implementation and Test: Free Pendulum 366
- 15.2 Visualization: Phase-Space Orbits 367
- 15.2.1 Chaos in Phase Space 368
- 15.2.2 Assessment in Phase Space 372
- 15.3 Exploration: Bifurcations of Chaotic Pendulums 374
- 15.4 Alternate Problem: The Double Pendulum 375
- 15.5 Assessment: Fourier/Wavelet Analysis of Chaos 377
- 15.6 Exploration: Alternate Phase-Space Plots 378
- 15.7 Further Explorations 379

- 16 Fractals and Statistical Growth Models 383**
- 16.1 Fractional Dimension (Math) 383
- 16.2 The Sierpiński Gasket (Problem 1) 384
- 16.2.1 Sierpiński Implementation 384
- 16.2.2 Assessing Fractal Dimension 385
- 16.3 Growing Plants (Problem 2) 386
- 16.3.1 Self-Affine Connection (Theory) 386
- 16.3.2 Barnsley’s Fern Implementation 387
- 16.3.3 Self-Affinity in Trees Implementation 389
- 16.4 Ballistic Deposition (Problem 3) 390
- 16.4.1 Random Deposition Algorithm 390
- 16.5 Length of British Coastline (Problem 4) 391
- 16.5.1 Coastlines as Fractals (Model) 392
- 16.5.2 Box Counting Algorithm 392
- 16.5.3 Coastline Implementation and Exercise 393
- 16.6 Correlated Growth, Forests, Films (Problem 5) 395
- 16.6.1 Correlated Ballistic Deposition Algorithm 395
- 16.7 Globular Cluster (Problem 6) 396
- 16.7.1 Diffusion-Limited Aggregation Algorithm 396

16.7.2	Fractal Analysis of DLA or a Pollock	399
16.8	Fractals in Bifurcation Plot (Problem 7)	400
16.9	Fractals from Cellular Automata	400
16.10	Perlin Noise Adds Realism \odot	402
16.10.1	Ray Tracing Algorithms	404
16.11	Exercises	407
17	Thermodynamic Simulations and Feynman Path Integrals	409
17.1	Magnets via Metropolis Algorithm	409
17.2	An Ising Chain (Model)	410
17.3	Statistical Mechanics (Theory)	412
17.3.1	Analytic Solution	413
17.4	Metropolis Algorithm	413
17.4.1	Metropolis Algorithm Implementation	416
17.4.2	Equilibration, Thermodynamic Properties (Assessment)	417
17.4.3	Beyond Nearest Neighbors, 1D (Exploration)	419
17.5	Magnets via Wang–Landau Sampling \odot	420
17.6	Wang–Landau Algorithm	423
17.6.1	WLS Ising Model Implementation	425
17.6.2	WLS Ising Model Assessment	428
17.7	Feynman Path Integral Quantum Mechanics \odot	429
17.8	Feynman’s Space–Time Propagation (Theory)	429
17.8.1	Bound-State Wave Function (Theory)	431
17.8.2	Lattice Path Integration (Algorithm)	432
17.8.3	Lattice Implementation	437
17.8.4	Assessment and Exploration	440
17.9	Exploration: Quantum Bouncer’s Paths \odot	440
18	Molecular Dynamics Simulations	445
18.1	Molecular Dynamics (Theory)	445
18.1.1	Connection to Thermodynamic Variables	449
18.1.2	Setting Initial Velocities	449
18.1.3	Periodic Boundary Conditions and Potential Cutoff	450
18.2	Verlet and Velocity–Verlet Algorithms	451
18.3	1D Implementation and Exercise	453
18.4	Analysis	456
19	PDE Review and Electrostatics via Finite Differences and Electrostatics via Finite Differences	461
19.1	PDE Generalities	461
19.2	Electrostatic Potentials	463
19.2.1	Laplace’s Elliptic PDE (Theory)	463
19.3	Fourier Series Solution of a PDE	464
19.3.1	Polynomial Expansion as an Algorithm	466
19.4	Finite-Difference Algorithm	467

- 19.4.1 Relaxation and Over-relaxation 469
- 19.4.2 Lattice PDE Implementation 470
- 19.5 Assessment via Surface Plot 471
- 19.6 Alternate Capacitor Problems 471
- 19.7 Implementation and Assessment 474
- 19.8 Electric Field Visualization (Exploration) 475
- 19.9 Review Exercise 476

- 20 Heat Flow via Time Stepping 477**
 - 20.1 Heat Flow via Time-Stepping (Leapfrog) 477
 - 20.2 The Parabolic Heat Equation (Theory) 478
 - 20.2.1 Solution: Analytic Expansion 478
 - 20.2.2 Solution: Time Stepping 479
 - 20.2.3 von Neumann Stability Assessment 481
 - 20.2.4 Heat Equation Implementation 483
 - 20.3 Assessment and Visualization 483
 - 20.4 Improved Heat Flow: Crank–Nicolson Method 484
 - 20.4.1 Solution of Tridiagonal Matrix Equations \odot 487
 - 20.4.2 Crank–Nicolson Implementation, Assessment 490

- 21 Wave Equations I: Strings and Membranes 491**
 - 21.1 A Vibrating String 491
 - 21.2 The Hyperbolic Wave Equation (Theory) 491
 - 21.2.1 Solution via Normal-Mode Expansion 493
 - 21.2.2 Algorithm: Time Stepping 494
 - 21.2.3 Wave Equation Implementation 496
 - 21.2.4 Assessment, Exploration 497
 - 21.3 Strings with Friction (Extension) 499
 - 21.4 Strings with Variable Tension and Density 500
 - 21.4.1 Waves on Catenary 501
 - 21.4.2 Derivation of Catenary Shape 501
 - 21.4.3 Catenary and Frictional Wave Exercises 503
 - 21.5 Vibrating Membrane (2D Waves) 504
 - 21.6 Analytical Solution 505
 - 21.7 Numerical Solution for 2D Waves 508

- 22 Wave Equations II: Quantum Packets and Electromagnetic 511**
 - 22.1 Quantum Wave Packets 511
 - 22.2 Time-Dependent Schrödinger Equation (Theory) 511
 - 22.2.1 Finite-Difference Algorithm 513
 - 22.2.2 Wave Packet Implementation, Animation 514
 - 22.2.3 Wave Packets in Other Wells (Exploration) 516
 - 22.3 Algorithm for the 2D Schrödinger Equation 517
 - 22.3.1 Exploration: Bound and Diffracted 2D Packet 518
 - 22.4 Wave Packet–Wave Packet Scattering 518

22.4.1	Algorithm	520
22.4.2	Implementation	520
22.4.3	Results and Visualization	522
22.5	E&M Waves via Finite-Difference Time Domain	525
22.6	Maxwell's Equations	525
22.7	FDTD Algorithm	526
22.7.1	Implementation	530
22.7.2	Assessment	530
22.7.3	Extension: Circularly Polarized Waves	531
22.8	Application: Wave Plates	533
22.9	Algorithm	534
22.10	FDTD Exercise and Assessment	535
23	Electrostatics via Finite Elements	537
23.1	Finite-Element Method \odot	537
23.2	Electric Field from Charge Density (Problem)	538
23.3	Analytic Solution	538
23.4	Finite-Element (Not Difference) Methods, 1D	539
23.4.1	Weak Form of PDE	539
23.4.2	Galerkin Spectral Decomposition	540
23.5	1D FEM Implementation and Exercises	544
23.5.1	1D Exploration	547
23.6	Extension to 2D Finite Elements	547
23.6.1	Weak Form of PDE	548
23.6.2	Galerkin's Spectral Decomposition	548
23.6.3	Triangular Elements	549
23.6.4	Solution as Linear Equations	551
23.6.5	Imposing Boundary Conditions	552
23.6.6	FEM 2D Implementation and Exercise	554
23.6.7	FEM 2D Exercises	554
24	Shocks Waves and Solitons	555
24.1	Shocks and Solitons in Shallow Water	555
24.2	Theory: Continuity and Advection Equations	556
24.2.1	Advection Implementation	558
24.3	Theory: Shock Waves via Burgers' Equation	559
24.3.1	Lax-Wendroff Algorithm for Burgers' Equation	560
24.3.2	Implementation and Assessment of Burgers' Shock Equation	561
24.4	Including Dispersion	562
24.5	Shallow-Water Solitons: The KdeV Equation	563
24.5.1	Analytic Soliton Solution	563
24.5.2	Algorithm for KdeV Solitons	564
24.5.3	Implementation: KdeV Solitons	565
24.5.4	Exploration: Solitons in Phase Space, Crossing	567
24.6	Solitons on Pendulum Chain	567

24.6.1	Including Dispersion	568
24.6.2	Continuum Limit, the Sine-Gordon Equation	570
24.6.3	Analytic SGE Solution	571
24.6.4	Numeric Solution: 2D SGE Solitons	571
24.6.5	2D Soliton Implementation	573
24.6.6	SGE Soliton Visualization	574
25	Fluid Dynamics	575
25.1	River Hydrodynamics	575
25.2	Navier–Stokes Equation (Theory)	576
25.2.1	Boundary Conditions for Parallel Plates	578
25.2.2	Finite-Difference Algorithm and Overrelaxation	580
25.2.3	Successive Overrelaxation Implementation	581
25.3	2D Flow over a Beam	581
25.4	Theory: Vorticity Form of Navier–Stokes Equation	582
25.4.1	Finite Differences and the SOR Algorithm	584
25.4.2	Boundary Conditions for a Beam	585
25.4.3	SOR on a Grid	587
25.4.4	Flow Assessment	589
25.4.5	Exploration	590
26	Integral Equations of Quantum Mechanics	591
26.1	Bound States of Nonlocal Potentials	591
26.2	Momentum–Space Schrödinger Equation (Theory)	592
26.2.1	Integral to Matrix Equations	593
26.2.2	Delta-Shell Potential (Model)	595
26.2.3	Binding Energies Solution	595
26.2.4	Wave Function (Exploration)	597
26.3	Scattering States of Nonlocal Potentials \odot	597
26.4	Lippmann–Schwinger Equation (Theory)	598
26.4.1	Singular Integrals (Math)	599
26.4.2	Numerical Principal Values	600
26.4.3	Reducing Integral Equations to Matrix Equations (Method)	600
26.4.4	Solution via Inversion, Elimination	602
26.4.5	Scattering Implementation	603
26.4.6	Scattering Wave Function (Exploration)	604
