Foreword	VII
1 The Greek era: Speculation, ideas and the comet of rigor	1
1.1 Infinity, challenging Greek philosophers	1
1.2 Infinity, mastered by a Greek “geometer”: Eudoxus.....	2
1.3 Archimedes and the geometric series to be.....	5
1.4 Memorizing a joint venture.....	9
2 Successful experiments on infinite summation	11
2.1 Oresmus and the geometric series.....	11
2.2 Freestyle: Cavalieri summing indivisibles	13
2.3 Leibniz’ telescopes.....	16
3 Series of functions: the prototypes	19
3.1 Preliminary: Aspects	19
3.1.1 Series versus sequences	19
3.1.2 Series: evaluation and expansion.....	20
3.2 The power of power series.....	23
3.2.1 Nilakantha and the arcustangent series	23
3.2.2 The hyperbolic logarithm and its series	26
3.2.3 Newton and the binomial series.....	29
3.2.4 Taylor series and expansion; ordinary power series.....	32
3.2.5 The binomial series in the hands of Euler.....	36
3.2.6 Euler’s algebraical analysis: evaluation and valuation.....	42
3.3 The power of trigonometric series	46
3.3.1 Facing antipodes	46
3.3.2 Euler evaluating a trigonometric series.....	46
3.3.3 Priming problems.....	49
3.3.4 The mysterious . . . Fourier series	50
3.4 Cauchy	55
3.4.1 Series of powers in the hands of Cauchy and Laurent	55
3.4.2 The Cauchy product.....	61

X	Contents
4	Series seriously: the Greek comet reappears 67
4.1	Rigor in retrospect and prospect67
4.2	Farewell to the infinitely small; the “epsilonotics”69
4.2.1	Convergence, continuity69
4.2.2	Dirichlet, Heine: uniform continuity71
4.2.3	From Abel to Weierstraß: uniform convergence72
4.3	Welcome to irrationals: the complete space of real numbers78
4.4	Another complete space: the home of convergent sequences84
5	On the verge of summability 89
5.1	Divergent series: suspected and respected89
5.2	The initiation of Cesàro and Abel summation90
5.2.1	Grandi’s series, recurrent series90
5.2.2	Frobenius’ theorem and the limit theorems of Cauchy and Abel92
5.2.3	The Cauchy product revisited by Abel and Cesàro94
5.2.4	Introducing the methods of basic Cesàro and of Abel means95
5.3	Features of Cesàro and Abel means98
5.3.1	Inclusion, limitation, efficiency98
5.3.2	The C_1 limit: a continuous functional on a Banach space101
5.3.3	An early triumph of arithmetic means: Fejér’s Theorem103
5.3.4	On the scale of Cesàro means103
5.3.5	Cesàro’s Cauchy product106
5.3.6	Inverse theorems, Tauber’s theorem107
	Appendixes (of notes, proofs, exercises) 111
	Life Data 119
	References 121
