Preface to English Edition — IX

Preface — XI

Part I: Devices containing a single-link pendulum

1 A pendulum with stationary pivot — 5

- 1.1 Equations of motion — 5
- 1.2 Domain of controllability — 7
- 1.3 Maximizing domain of attraction — 9
- 1.4 Delay in feedback loop — 13
- 1.5 Nonlinear control — 16
- 1.6 Controllability domain of the nonlinear model — 17

2 A pendulum with wheel-based pivot — 21

- 2.1 Equations of motion — 21
- 2.2 Domain of controllability — 24
- 2.3 Maximizing domain of attraction — 27
- 2.4 Nonlinear control — 29

3 A pendulum with a flywheel — 31

- 3.1 The arrangement of the pendulum with a flywheel — 31
- 3.2 Equations of motion — 33
- 3.3 Local stabilization of the pendulum in the top equilibrium — 35
- 3.4 Suppressing flywheel rotation — 41
- 3.5 Swinging and damping the pendulum — 42
- 3.6 Translating the pendulum from the bottom equilibrium into the top one — 45
- 3.7 Numerical experiments — 46
- 3.8 Practical experiments — 47

4 Wheel rolling control by means of a pendulum — 50

- 4.1 Mathematical model — 51
- 4.2 Steady modes of motion — 53
- 4.3 Stability of steady-state modes — 56

- 5 Optimal swinging and damping of a swing — 58**
 - 5.1 On optimal control design in second-order systems — 58
 - 5.2 Mathematical model of a swing — 62
 - 5.3 Maximizing the swing oscillations magnitude — 63
 - 5.4 Minimizing swing oscillation magnitude — 67
 - 5.5 Controlling a swing with regard for aerodynamic resistance and dry friction — 69
- 6 Pendulum control that minimizes energy consumption — 71**
 - 6.1 Estimation of energy consumption — 71
 - 6.2 Translating the pendulum to the unstable equilibrium — 74
 - 6.3 Translating the pendulum to the stable equilibrium — 80

Part II: Double physical pendulum

- 7 Local stabilization of an inverted pendulum by means of a single control torque — 91**
 - 7.1 Mathematical model of the pendulum — 91
 - 7.2 Linearized model — 93
 - 7.3 Domains of controllability — 94
 - 7.4 Feedback design. Maximizing domain of attraction — 98
 - 7.5 Numerical experiments — 104
- 8 Optimal control design for swinging and damping a double pendulum — 110**
 - 8.1 Mathematical model — 110
 - 8.2 Reduced angle — 112
 - 8.3 Optimal control that swings the pendulum — 113
 - 8.4 Optimal control law for pendulum damping — 119
 - 8.5 On translating the pendulum from its bottom equilibrium to the top one — 123
- 9 Global stabilization of an inverted pendulum controlled by torque in the inter-link joint — 126**
 - 9.1 Mathematical model — 127
 - 9.2 Cascade form of dynamic equations — 128
 - 9.3 Control law that swings the pendulum — 129
 - 9.4 Tracking the desired inter-link angle dynamics — 130
 - 9.5 Local stabilization of an inverted pendulum — 131
 - 9.6 Numerical experiments — 131

- 10 Global stabilization of an inverted pendulum controlled by torque in the pivot — 134**
 - 10.1 Mathematical model — 134
 - 10.2 Swinging the pendulum — 135
 - 10.3 Straightening the pendulum — 135
 - 10.4 Linear model, local stabilization — 138
 - 10.5 Numerical experiments — 141
- 11 Multi-link pendulum on a moving base — 145**
 - 11.1 Multi-link pendulum on a wheel — 145
 - 11.2 Single-link pendulum on a wheel — 149
 - 11.3 Global stabilization of the inverted pendulum — 151
 - 11.4 Domain of controllability — 155
 - 11.5 Designing time-optimal trajectories — 157
 - 11.6 A pendulum on a cart — 159
 - 11.7 Frequency lowering as a result of constraining — 161

Part III: Ball on a beam

- 12 Stabilization of a ball on a straight beam — 165**
 - 12.1 Mathematical model of the system — 165
 - 12.2 Linearized model — 167
 - 12.3 Feedback design — 169
 - 12.4 Numerical experiments — 171
- 13 Stabilization of a ball on a curvilinear beam — 176**
 - 13.1 Mathematical model of the system — 176
 - 13.2 Linearized model — 178
 - 13.3 Feedback design — 180
 - 13.4 Numerical experiments — 181

Part IV: Gyroscopic stabilization of a two-wheel bicycle

- 14 Bicycle design — 189**
 - 14.1 Bicycle with one controlled wheel — 189
 - 14.2 Bicycle with two controlled wheels — 192
 - 14.3 Gyroscopic stabilizer — 194
 - 14.4 Equations of tilt oscillations of the bicycle — 195

- 15 Designing a control law to stabilize the bicycle tilt — 198**
- 15.1 Bicycle tilt measurement by means of accelerometers — 198
- 15.2 Bicycle movement along a straight line — 199
- 15.3 Motion along a circle — 201
- 15.4 Numerical and practical experiments — 203

Part V: Avoiding undesired vibrations

- 16 Bang-bang control and fluent control — 209**
- 16.1 Mathematical model — 210
- 16.2 Formulation of the problem — 212
- 16.3 Bang-bang control versus fluent control — 213

- 17 Trapezoidal control for a system with compliant elements — 217**
- 17.1 Trapezoidal fluent control — 217
- 17.2 Trapezoidal control with shorter transients — 220
- 17.3 Relationship between time T and displacement x_d — 223
- 17.4 Numerical analysis of the open-loop system — 224
- 17.5 Feedback control — 227

Bibliography — 229

Index — 237
