Foreword	13
Preface	17

PART I Basic Principles

1 Integrating Enterprise Information Systems	25
1.1 Basic Principles	25
1.1.1 Historical Development	26
1.1.2 Reasons for and Goals of Integrating IT Systems	28
1.1.3 Characteristics of Integration	29
1.2 Practical Integration Example	31
1.3 Integration Concepts and Technologies	35
1.3.1 Architectures	35
1.3.2 Integration Approaches	37
1.3.3 Technologies	41
1.4 EAI Platforms and Their Significance in Enterprises	44
1.5 Basics of BPM	46
1.6 Use of ARIS Business Architect and SAP Solution Manager	50
1.6.1 Concept	51
1.6.2 Bidirectional Integration	54
2 SAP NetWeaver PI	57
2.1 SAP NetWeaver PI as Part of SAP NetWeaver	57
2.1.1 Challenges of PI	58
2.1.2 SAP NetWeaver	63
2.1.3 SAP NetWeaver PI as a Central Infrastructure of SOAs	64
2.1.4 IT Practices	65
2.2 Functionality of SAP NetWeaver PI	68
2.2.1 Address Example	69

2.2.2	Classification of Messages	70
2.2.3	Steps for Implementing a Message Flow	75
2.3	Components	76
2.3.1	SLD	77
2.3.2	Enterprise Services Repository and Services Registry	79
2.3.3	Integration Directory	81
2.3.4	Runtime Workbench	83
2.3.5	SAP NetWeaver Administrator (NWA)	84
2.3.6	IS	85
2.4	Objects	93
2.4.1	Software Products in the Enterprise Services Repository	93
2.4.2	Service Interfaces and Mapping Objects in the Enterprise Services Repository	94
2.4.3	Configuration Objects in the Integration Directory	97
2.5	Advanced Concepts	99
2.5.1	Outside-In vs. Inside-Out	99
2.5.2	Communication Components	101
2.5.3	SAP NetWeaver PI Connectivity	102
2.5.4	Adapter	104
2.5.5	Quality of Service (QoS)	108
2.5.6	Message Queues	109
2.5.7	Mappings	111
2.6	New Concepts in SAP NetWeaver PI 7.1	113
2.6.1	Local Processing on the AAE	113
2.6.2	Integrated Configuration	115
2.6.3	Enhanced (Dynamic) Receiver Determination ...	116
2.6.4	XML Validation	116
2.6.5	Interface Pattern: Communication Patterns between Sender and Receiver	119
2.6.6	Direct Communication	120
2.6.7	Web Service Reliable Messaging	122
2.6.8	Message Packaging	123
2.6.9	Mapping Lookups	125

PART II Basic System Configuration

3	Basic System Configuration	129
3.1	Prerequisites	129
3.2	Defining the Connected Systems in the SLD	131
3.2.1	Creating the Systems: Technical Systems	132
3.2.2	Creating the Systems: Business Systems	137
3.3	Integrating the SAP Systems with the SLD	140
3.3.1	Creating the RFC Connections	140
3.3.2	Configuring the SLD Integration	143
3.4	Configuring the Local IE	146
3.4.1	Defining the Role of the Business System	147
3.4.2	Defining and Activating Message Queues	150
3.4.3	Activating the XI Service	150
3.4.4	Establishing the Connection to the Integration Builder and the Runtime Workbench	152
3.5	Adapter-Specific System Settings	157
3.5.1	Checking the ABAP-Proxy Integration	158
3.5.2	Settings for Using the RFC Adapter	158
3.5.3	Settings for Using the IDoc Adapter	160
3.5.4	Adding ABAP Mappings to the Available Mappings (Optional)	164
3.5.5	Preparations for Using Alert Monitoring (Optional)	166
3.6	Course-Specific Preparations	168
3.6.1	Creating and Assigning the Software Product	170
3.6.2	Importing the Software Product in the Enterprise Services Repository and Setting it Up	175
4	Technical Exercises	183
4.1	Exercise 1: RFC-to-File	185
4.1.1	Basic Principles	185
4.1.2	Design	187
4.1.3	Configuration	201

4.1.4	Process and Monitoring	210
4.1.5	Alternative Mapping: ABAP Mapping (Optional)	215
4.2	Exercise 2: File-to-IDoc	220
4.2.1	Basics	220
4.2.2	Design	223
4.2.3	Configuration	228
4.2.4	Process and Monitoring	235
4.3	Exercise 3: ABAP-Proxy-to- Simple Object Access Protocol (SOAP)	238
4.3.1	Basics	239
4.3.2	Design	240
4.3.3	Configuration	250
4.3.4	Process and Monitoring	253
4.4	Exercise 4: Business Process Management (BPM)	254
4.4.1	Basics	255
4.4.2	Design	256
4.4.3	Configuration	274
4.4.4	Process and Monitoring	280
4.4.5	Extending the Exercise by Alert Monitoring (Optional)	284
4.5	Exercise 5: File-to-JDBC	290
4.5.1	Basics	290
4.5.2	Design	291
4.5.3	Configuration	295
4.5.4	Process and Monitoring	300
4.5.5	Alternative Java Mapping (Optional)	300
4.6	More Adapters	307
4.6.1	Java Message Service (JMS) Adapter	307
4.6.2	SAP Business Connector (BC) Adapter	308
4.6.3	Plain HTTP Adapter	308
4.6.4	Java Proxy Generation	309
4.6.5	RosettaNet Implementation Framework (RNIF) Adapter	309
4.6.6	CIDX Adapter	310

5 SARIDIS Case Study in Sales and Distribution (SD) 311

5.1	Creating the Query	314
5.1.1	Basic Principles	314
5.1.2	Design	317
5.1.3	Configuration	327
5.1.4	Process and Monitoring	332
5.2	Submitting the Quotations	333
5.2.1	Basic Principles	334
5.2.2	Design	337
5.2.3	Configuration	358
5.2.4	Process and Monitoring	367
5.3	Entering a Sales Order	371
5.3.1	Basic Principles	372
5.3.2	Design	373
5.3.3	Configuration	384
5.3.4	Process and Monitoring	388
5.4	Delivering the Invoice	392
5.4.1	Basic Principles	392
5.4.2	Design	394
5.4.3	Configuration	397
5.4.4	Process and Monitoring	401
5.5	Manual Decision on Queries	405
5.5.1	Basic Principles	406
5.5.2	Design	407
5.5.3	Configuration	414
5.5.4	Process and Monitoring	419

6 Enhancements and Outlook 423

6.1	Possible Enhancements to the Case Study	423
6.1.1	Extending the Breadth of the Case Study	423
6.1.2	Extending the Depth of the Case Study	428
6.2	Beer Distribution Game	429
6.2.1	Predefined Software Components	431
6.2.2	Design and Implementation	433
6.2.3	Options for Enhancement	434

6.3	SAP NetWeaver PI and SOA	435
6.4	Further Development of SAP NetWeaver PI	436
6.4.1	Development of SAP NetWeaver PI	437
6.4.2	Roadmap of the SOA Middleware	439
6.5	Summary	456

Appendices	457
-------------------------	------------

A	Exercise Materials	459
B	Bibliography	479
C	The Authors	483
	Index	487
