Volume 1

Preface — V

1	Units in group rings: an introduction — 1
1.1	Constructions of units: elementary matrices and bicyclic units — 2
1.2	Construction of units: cyclotomic units and Bass units — 5
1.3	Examples: unit groups of some orders in number fields — 9
1.4	Examples: unit groups of some non-commutative orders — 14
1.5	Examples: group rings of groups of small order — 20
1.6	Finite rings — 28
2	Representations of algebras — 32
2.1	Semisimple algebras — 32
2.2	Splitting fields — 42
2.3	Characteristic polynomial, trace and norm — 46
2.4	Brauer group — 55
2.5	Cohomology — 57
2.6	Crossed products — 64
3	Wedderburn decomposition of semisimple group algebras — 73
3.1	Representations and characters of finite groups — 74
3.2	Some operations with characters — 81
3.3	Wedderburn components from character tables — 85
3.4	Wedderburn components from monomial characters — 92
3.5	Strongly monomial characters — 102
3.6	Induction theorems — 112
3.7	Brauer-Witt Theorem — 114
3.8	Examples — 120
4	Dedekind domains, valuations and orders — 123
4.1	Localization and algebraic integers — 123
4.2	Dedekind domains — 130
4.3	Finitely generated modules over Dedekind domains — 137
4.4	Extensions of Dedekind domains — 142
4.5	Valuations — 146
4.6	Orders — 152
4.7	The discriminant — 157
4.8	Brauer group of a number field — 160

5	The group of units of an order — 170
5.1	Lattices in real vector spaces — 170
5.2	Hey's Theorem and Dirichlet's Unit Theorem — 173
5.3	The group of units of an order is finitely generated — 179
5.4	The group of units of an order is finitely presented — 194
5.5	Subgroups of finite index — 198
6	Cyclotomic integers — 205
6.1	Cyclotomic fields — 205
6.2	Cyclotomic units — 208
7	Central units — 226
7.1	The group of central units of an order — 226
7.2	Large subgroups of central units: an algorithm — 237
7.3	Bass units as generators of large groups of units — 248
8	Generic units — 255
8.1	Shifted cyclotomic polynomials — 256
8.2	The group of generic units — 262
8.3	A logarithm function — 265
8.4	A basis of generic units for a subgroup of finite index in $\mathcal{U}(\mathbb{Z}C_n)$ — 272
8.5	Polynomials of small degree defining units — 276
9	K-theory — 282
9.1	Grothendieck group — 282
9.2	The Whitehead group — 284
9.3	Stable range condition — 292
9.4	Whitehead group and the stable range condition — 295
9.5	Applications of K-theory to units — 303
10	General linear groups of degree 2 — 312
10.1	Number theoretical results — 313
10.2	Normality of $E_2(I_1 \wr I_2)$ in $SL_2(R, I_1 \wr I_2)$ — 314
10.3	The factor group $SL_2(R, I_1 \wr I_2)$ by $E_2(I_1 \wr I_2)$ — 319
10.4	The group $E_2(I)$ is of finite index in $SL_2(R)$ — 326
11	Generators of unit groups of group rings — 337
11.1	Bass Unit Theorem — 337
11.2	Generalized bicyclic units and Bass units I — 341
11.3	Bicyclic units and Bass units — 345
11.4	Fixed point free groups and Frobenius complements — 348
11.5	Group rings of nilpotent groups — 355

12	Exceptional simple components — 359
12.1	Components of index one — 359
12.2	Components of index two — 366
12.3	Generalized bicyclic units and Bass units II — 373
12.4	Normal closure of the trivial units — 375
12.5	Normal complements — 380
12.6	Examples: metacyclic groups — 383
12.7	Examples with insufficient Bass units and bicyclic units — 390
13	Idempotents and central units in group rings — 392
13.1	Central subgroups and abelian-by-supersolvable groups — 392
13.2	Independent units and abelian-by-supersolvable groups — 397
13.3	Central subgroups and strongly monomial groups — 400
13.4	Independent units and strongly monomial groups — 402
13.5	Primitive idempotents and nilpotent groups — 408
13.6	Primitive idempotents and strongly monomial groups — 416
13.7	Some metacyclic groups — 420

References — 425

Index of Notation — 435

Index — 439

Volume 2

Preface — V

14	Free Groups — 1
14.1	Ping-Pong Lemma and free groups generated by bicyclic units — 2
14.2	Free groups in integral group rings over Hamiltonian groups — 10
14.3	Attractors — 14
14.4	Free companions — 21
14.5	Attractors revisited — 38
15	Hyperbolic geometry — 44
15.1	Möbius transformations — 44
15.2	Riemann varieties of constant curvature — 47
15.3	The groups of isometries of \mathbb{H}^3 and \mathbb{B}^3 — 52
15.4	Isometric spheres in \mathbb{B}^n — 60
15.5	Discrete subgroups of $\mathrm{PSL}_2(\mathbb{C})$ — 65

16	Poincaré's Theorem — 69
16.1	Polyhedra and tessellations — 69
16.2	Group presentations — 80
17	Fundamental polyhedra — 95
17.1	Dirichlet fundamental polyhedra — 95
17.2	Ford fundamental polyhedron — 99
17.3	Polyhedra of finite volume — 102
17.4	An algorithm to compute a fundamental polyhedron — 106
17.5	Symmetries on Dirichlet polyhedra — 113
18	Unit groups of orders in quaternion algebras — 116
18.1	Algebras of Kleinian type — 116
18.2	Bianchi groups — 119
18.3	Calculating fundamental polyhedra for orders in division algebras of Kleinian type — 133
18.4	Generators of unit groups of group rings with exceptional components — 142
19	Virtually free-by-free groups — 151
19.1	Free-by-free groups — 151
19.2	Orders and free-by-free unit groups — 158
19.3	Virtual cohomological dimension and finite groups of Kleinian type — 162
19.4	Examples of groups of Kleinian type — 166
19.5	Nilpotent groups of Kleinian type — 172
19.6	Groups of Kleinian type that are not nilpotent — 185
19.7	Structure theorem — 192

References — 195

Index of Notation — 205

Index — 209
