CHAPTER 1	1
THE EVACUATION AND THE PRESERVATION OF BIOLOGICAL TISSUES	1
Did the ancient Egyptian evacuate the cells of the mummy from their content?	1
Mummification, the first step	1
Body evacuation water removes and water prevention	2
Microscopes, the second step	6
Robert Hooke described cells and empty cells	7
CHAPTER 2	9
Live, dead and empty cells	9
Live, dead and empty cells are natural phenomena	9
The meaning of the Ghost as a term and their use	10
Natural Ghosting and The first microbial Ghosts	11
Counter-Ghosts Ampicillin degrades the bacterial cell wall but the Bacteria still able to recover!	12
Why, BGs are stable like mummy?	13
All microbiologists have seen evacuated microbes (Evacology)	14
CHAPTER 3	16
E lysis gene	16
Gentle pore in living cells walls and membranes	16
Bacteriophage	17
Gene E codes for 91 amino acids	21
Gene E	21
E lysis gene nucleotides sequence	21
Amino acids sequence	21
Negative pressure induced by the lysis. Why one pore usually appears?	28
CHAPTER 4	30
Recalling the power of the Salts	30
How could protein degrade protein?	30
Why not to pass the amino acids and let atoms do similar functions?	30
The plasmid	30
Experiences with plasmid	32
The scientific aspect of Plasmid Alkaline lysis	34
The protocol	34
GET solution	35
SDS-NaOH solution	35
5 M potassium acetate solution	36
RNase solution	36
TE-Buffer	36
TE buffer containing RNase	36
Lithium small-scale plasmid preparation (He et al., 1990)	36

TELT-solution	37
Slot lyses	37
Protoplasting buffer	38
Lysis buffer	38
My Slot lysis protocol	38
DNA isolation and purification	39
Protocol	40
Ethanol-HSS precipitation	41
HSS solution	42
Quantitative analysis of DNA	42
Determination of the size of DNA fragments	42
Inexpensive marker	43
Determination of the DNA concentration	44
Protein concentration determination using UV	44
UV measurement at 280 nm	44
CHAPTER 5	45
Worming-steps toward the Sponge-Like Protocol for BGs preparation	45
The idea of the Sponge-Like protocol	45
Sponge-Like protocol is a Critical addition to the Ghosts preparation, vaccine and drug delivery	46
Langsam aber sicher	46
How could the lung cells adjust the amount of the H <sub>2</sub> O <sub>2</sub> to kill the <i>P. aeruginosa</i> but not to kill themselves?	47
No, better than that, benefit without nearly no harm or risk.	51
A new protocol for Ghosts preparation	52
Critical factors lead to direct us toward the use of the BGs as vaccines	53
Steps on the rode	56
Why NaOH and Why SDS?	56
Why MIC?	58
Experimental Design-Plackett-Burman, Box-Behanken and the excel solver	59
Why CaCO <sub>3</sub> ?	62
Preparation of competent cells	62
Preparation of competent cells by CaCl <sub>2</sub> method (Sambrook et al., 1989)	62
CaCl <sub>2</sub> - Tris solution	63
Preparation of competent cells for long-term storage (Hanahan, 1983; 1985)	63
RF1 solution	63
RF2 solution	63
Transformation of DNA	64
Transformation of <i>E. coli</i> cells	64
Electroporation	65
The differences between Electroporation and transformation	65
Why H <sub>2</sub> O <sub>2</sub>	69

Why Ethanol	71
Why centrifugation?	71
Why washing?	72
The BGs Quality	72
CHAPTER 6	74
SPONGE-LIKE (SL) PROTOCOL	74
SL and SL reduced protocol in more details, explanation, modification and special Cases	74
Stocks preparation	74
Bacterial Strain preparation	75
E. coli BL21 (DE3) pLysS (Promega)	75
Bacterial cultivation	76
Determination of the MIC and Minimum Growth Concentration (MGC) for NaOH, SDS, and H <sub>2</sub> O <sub>2</sub>	76
Bacterial Ghost-Plackett-Burman Experiment	77
The 5x strategy experiments were conducted in three steps	81
The 2x strategy	82
BGs evaluation using light microscope	82
Determination of the DNA concentration	82
Determination of the protein concentration.	84
Sample preparation for electron microscope examination	84
Scanning of the BGs surface	84
Liner multiple regression analysis of Plackett-Burman experiment	84
Generating first Order Model	85
Determination of the variables main effect	85
Determination of E. coli viability	85
Lysis of the viable Cells by inducing the Lysis gene on pLysS plasmid	85
Agarose Gel Electrophoresis	85
Reduced protocol	88
Experiments one and two for BGs preparation	88
Agglutination Test for STGs Surface Antigen-Antibodies Reaction.	91
Experimental animals	92
Oral vaccination and challenge test	92
Hemocytometer	93
Purpose of the hemocytometer	93
Preparing the sample	94
Procedure	94
Counting the cells	94
CHAPTER 7	95
Note about SPONGE-LIKE PROTOCOL	95
General advices for a better BGs preparation	95
BGs definition	98
The advantage of Microbial Ghosts	99

Disadvantage of the BGs.	102
CHAPTER 8	103
BGS NAMES	103
Bacterial cells prepared as Ghosts or their surface protein expressed in Ghosts	103
Some Examples in more explanation	113
E. coli	113
The E. coli used as BGs include	114
Such advantages concerning their use as Ghosts include	114
Yeast	115
Virus	115
Bacteriophage	115
Newcastle virus	116
Viral Ghost experiment	116
Determination of the RNA Concentration	116
Determination of the Protein Concentration	116
Determination of the 260 (RNA) 280 (Protein) ratio	117
Agarose Gel Electrophoresis	117
Virus Particle fixing on slide	117
Sample Preparation for Electron Microscope	117
Scanning of the Viral Ghosts Surface	117
Ghosts Future	119
References	120
Table of Abbreviations	127
Index	128
