

Contents

1	Introduction	1
2	Grain Boundaries: Description, Structure and Thermodynamics	5
2.1	Crystallographic Description of Grain Boundaries	5
2.2	Atomic Structure of Grain Boundaries	8
2.2.1	Low-Angle Grain Boundaries	9
2.2.2	High-Angle Grain Boundaries	10
2.3	Classification of High-Angle Grain Boundaries	13
2.3.1	Coincidence-Site Lattice Model	13
2.3.2	Interplanar Spacing	16
2.3.3	Hierarchy of Grain Boundary Planes	17
2.4	Basic Thermodynamics of Grain Boundaries	22
3	Approaches to Study Grain Boundary Segregation	25
3.1	Basic Definitions and Terminology	25
3.2	Experimental Methods for Study of Grain Boundary Segregation	26
3.2.1	Surface Analysis Techniques	27
3.2.2	Microscopic Techniques	35
3.3	Theoretical Approaches to Study Grain Boundary Segregation	38
3.3.1	Quantum Mechanical Methods	39
3.3.2	Interatomic Potentials	41
3.3.3	Simulation Techniques	43
4	Models of Equilibrium Grain Boundary Segregation	51
4.1	Thermodynamics of Grain Boundary Segregation	51
4.2	Gibbs Adsorption Isotherm	52
4.3	Langmuir–McLean Types of Segregation Isotherm	55
4.3.1	Physical Meaning of Thermodynamic State Functions Appearing in Segregation Isotherms	61
4.3.2	Langmuir–McLean Model	74
4.3.3	Guttman Model of Grain Boundary Segregation in Interacting Multi-component Systems	81
4.3.4	Fowler Model	86

4.3.5	Other Models for Grain Boundary Segregation.....	89
4.3.6	Models for Different Segregation Sites	92
4.4	Models for Thermodynamic Functions of Interfacial Segregation	94
4.4.1	Model of Wynblatt and Ku	95
4.4.2	Model of Seah	97
4.4.3	Model of Miedema	98
4.4.4	Model of Kumar	98
4.4.5	Model of Mukherjee and Morán-López.....	99
4.4.6	BFS Model	100
4.4.7	SMA–TBIM Approach	101
5	Effect of Variables on Equilibrium Grain Boundary Segregation.....	103
5.1	Temperature and Bulk Composition	103
5.2	Pressure	107
5.3	Magnetic Effects.....	108
5.4	Grain Boundary Energy	111
5.5	Nature of Segregating Element	129
5.5.1	Truncated BET Isotherm.....	129
5.5.2	Grain Boundary Segregation Diagram	131
5.5.3	Enthalpy–Entropy Compensation Effect	135
5.6	Grain Size	141
5.7	Prediction of Grain Boundary Segregation	146
5.7.1	Model of Lejček and Hofmann	146
5.7.2	Model of Wynblatt and Shi	150
6	Principles of Non-equilibrium Segregation	153
6.1	Kinetics of Grain Boundary Segregation	153
6.1.1	Semi-infinite Solution of Fick Equation	153
6.1.2	Layer-by-Layer Model (Model of Hofmann and Erlewein)....	156
6.1.3	Model of Limited Reaction Rates	158
6.2	Non-equilibrium Segregation	158
6.2.1	Thermally Induced Segregation	159
6.2.2	Radiation-Induced Segregation	162
6.2.3	Stress-Induced Segregation	165
6.2.4	Grain Boundary Segregation and Migration	167
7	Grain Boundary Segregation and Related Phenomena.....	173
7.1	Grain Boundary Cohesion	173
7.1.1	Grain Boundary Cohesion and Temper Embrittlement.....	173
7.1.2	Hydrogen Embrittlement	181
7.1.3	Other Types of Non-reactive Environmental Decohesion	183
7.2	Grain Boundary Corrosion	185
7.2.1	Corrosion	186
7.2.2	Stress Corrosion Cracking	188

7.3	Grain Boundary Diffusion	190
7.3.1	Fundamentals of Grain Boundary Diffusion	190
7.3.2	Relationship Between Grain Boundary Diffusion and Segregation	195
7.4	Grain Boundary Engineering	196
Appendix A Parameters of Grain Boundary Segregation		203
A.1	Enthalpy, Entropy and Gibbs Energy of Segregation	203
A.2	Interaction Coefficients	210
Appendix B Predicted Values of Enthalpy and Entropy of Segregation		213
