List of definitions and notations — IX

Preface — XV

- § 145 *p*-groups all of whose maximal subgroups, except one, have derived subgroup of order  $\leq p$  — 1
- § 146 *p*-groups all of whose maximal subgroups, except one, have cyclic derived subgroups — 8
- § 147 *p*-groups with exactly two sizes of conjugate classes — 15
- § 148 Maximal abelian and minimal nonabelian subgroups of some finite two-generator *p*-groups especially metacyclic — 17
- § 149 *p*-groups with many minimal nonabelian subgroups — 50
- § 150 The exponents of finite *p*-groups and their automorphism groups — 59
- § 151 *p*-groups all of whose nonabelian maximal subgroups have the largest possible center — 61
- § 152 *p*-central *p*-groups — 64
- § 153 Some generalizations of 2-central 2-groups — 67
- § 154 Metacyclic *p*-groups covered by minimal nonabelian subgroups — 70
- § 155 A new type of Thompson subgroup — 72
- § 156 Minimal number of generators of a *p*-group,  $p > 2$  — 75
- § 157 Some further properties of *p*-central *p*-groups — 78
- § 158 On extraspecial normal subgroups of *p*-groups — 82
- § 159 2-groups all of whose cyclic subgroups *A*, *B* with  $A \cap B \neq \{1\}$  generate an abelian subgroup — 85

- § 160  $p$ -groups,  $p > 2$ , all of whose cyclic subgroups  $A, B$  with  $A \cap B \neq \{1\}$  generate an abelian subgroup — 98
- § 161  $p$ -groups where all subgroups not contained in the Frattini subgroup are quasinormal — 102
- § 162 The centralizer equality subgroup in a  $p$ -group — 109
- § 163 Macdonald's theorem on  $p$ -groups all of whose proper subgroups are of class at most 2 — 113
- § 164 Partitions and  $H_p$ -subgroups of a  $p$ -group — 116
- § 165  $p$ -groups  $G$  all of whose subgroups containing  $\Phi(G)$  as a subgroup of index  $p$  are minimal nonabelian — 121
- § 166 A characterization of  $p$ -groups of class  $> 2$  all of whose proper subgroups are of class  $\leq 2$  — 124
- § 167 Nonabelian  $p$ -groups all of whose nonabelian subgroups contain the Frattini subgroup — 128
- § 168  $p$ -groups with given intersections of certain subgroups — 137
- § 169 Nonabelian  $p$ -groups  $G$  with  $\langle A, B \rangle$  minimal nonabelian for any two distinct maximal cyclic subgroups  $A, B$  of  $G$  — 141
- § 170  $p$ -groups with many minimal nonabelian subgroups, 2 — 143
- § 171 Characterizations of Dedekindian 2-groups — 145
- § 172 On 2-groups with small centralizers of elements — 151
- § 173 Nonabelian  $p$ -groups with exactly one noncyclic maximal abelian subgroup — 153
- § 174 Classification of  $p$ -groups all of whose nonnormal subgroups are cyclic or abelian of type  $(p, p)$  — 156
- § 175 Classification of  $p$ -groups all of whose nonnormal subgroups are cyclic, abelian of type  $(p, p)$  or ordinary quaternion — 168

- § 176 Classification of  $p$ -groups with a cyclic intersection of any two distinct conjugate subgroups — 175
- § 177 On the norm of a  $p$ -group — 217
- § 178  $p$ -groups whose character tables are strongly equivalent to character tables of metacyclic  $p$ -groups, and some related topics — 221
- § 179  $p$ -groups with the same numbers of subgroups of small indices and orders as in a metacyclic  $p$ -group — 228
- § 180  $p$ -groups all of whose noncyclic abelian subgroups are normal — 233
- § 181  $p$ -groups all of whose nonnormal abelian subgroups lie in the center of their normalizers — 239
- § 182  $p$ -groups with a special maximal cyclic subgroup — 242
- § 183  $p$ -groups generated by any two distinct maximal abelian subgroups — 245
- § 184  $p$ -groups in which the intersection of any two distinct conjugate subgroups is cyclic or generalized quaternion — 248
- § 185 2-groups in which the intersection of any two distinct conjugate subgroups is either cyclic or of maximal class — 254
- § 186  $p$ -groups in which the intersection of any two distinct conjugate subgroups is either cyclic or abelian of type  $(p, p)$  — 258
- § 187  $p$ -groups in which the intersection of any two distinct conjugate cyclic subgroups is trivial — 263
- § 188  $p$ -groups with small subgroups generated by two conjugate elements — 267
- § 189 2-groups with index of every cyclic subgroup in its normal closure  $\leq 4$  — 275
- Appendix 45 Varia II — 290
- Appendix 46 On Zsigmondy primes — 326
