

Contents

1. Introduction	13
2. Numerical method	19
2.1. One-way coupled discrete element model	19
2.1.1. Contact force	20
2.1.2. Hydrodynamic forces	20
2.1.3. Magnetic forces	21
2.1.4. Fixed dipole model	22
2.1.5. Mutual dipole model	22
2.1.6. Background fields from finite element simulations . .	27
2.2. Smoothed particle hydrodynamics method	31
2.3. Two-way coupled model	34
2.4. Numerical shear cell	38
2.5. Time step	42
2.6. Evaluation of shear stress	43
2.7. Evaluation of coordination numbers	46
3. Magnetization of a magnetorheological fluid	49
3.1. Definition of the magnetization	49
3.1.1. Mimicking the experimental procedure	50
3.1.2. Fitting the large-distance magnetic induction	52
3.1.3. Sum of magnetic moments	53
3.1.4. Comparison of the three definitions	54
3.2. Uniqueness	55
3.3. Many body effects	61
3.4. Parametrization of the magnetization and fit to experimen- tal data	65
3.5. Conclusion	69

4. Dynamics of a single chain	71
4.1. Shear stress on a single upright chain	71
4.2. Equilibrium of longitudinal and transversal forces in a two particle simulation	73
4.3. Comparison to experiments	77
4.3.1. Chain shape	77
4.3.2. Chain length	78
4.4. Shear stress as a function of Mason number	80
4.5. Conclusion	83
5. Hydrodynamic drag models	85
5.1. Simulation setup and numerical methods	87
5.2. Analytical comparison of Stokes and Dallavalle/Di Felice drag laws	89
5.3. Numerical comparison of different simulation models	90
5.4. Criterion for the applicability of the one-way coupled model	97
5.5. Influence of the drag force in one-way coupled simulations .	99
5.6. Conclusion	102
6. Shear stress analysis	105
6.1. Influence of model parameters	106
6.1.1. Box size	106
6.1.2. Cutoff radius	108
6.1.3. Young's modulus	111
6.1.4. Fixed vs. mutual dipole model	111
6.2. Comparison to experiments	115
6.2.1. Shear stress as a function of magnetic field (fixed dipole model)	115
6.2.2. Shear stress as a function of magnetic field (mutual dipole model)	118
6.2.3. Viscosity as a function of Mason number	121
6.2.4. Shear stress as a function of volume fraction	127
6.3. Enhancement of shear stress	133
6.3.1. Nonmagnetic coating	133
6.3.2. Wall roughness profile	137
6.3.3. Wall magnetism	146
6.3.4. Anchor effects	148
6.4. Conclusion	152

7. Structure formation	155
7.1. Visual analysis of structure formation	156
7.1.1. Failure mechanisms in the chain regime	160
7.1.2. Failure mechanisms in the sheet regime	162
7.1.3. Failure mechanisms in the column regime	164
7.1.4. Failure mechanisms at the wall interface for rough shear cell walls	165
7.2. Coordination number analysis	168
7.2.1. Structure classification by coordination number . . .	168
7.2.2. Structure formation at different magnetic fields . . .	169
7.2.3. Structure formation at different volume fractions . .	180
7.2.4. Structure formation at different shear rates	183
7.2.5. Neighbor angle analysis	184
7.3. Comparison to experiments	190
7.4. Influence of model parameters	191
7.4.1. Repulsion	191
7.4.2. Box size	194
7.5. Conclusion	197
8. Summary	201
Bibliography	205
Appendix	
A. Simulation parameters	215
B. Abbreviations	225
C. Symbols	226
Danksagung	233
