Part I Theory of Star Formation and Dynamical Evolution of Stellar Systems

1	The Raw Material of Cluster Formation: Observational Constraints.	3
	Cathie J. Clarke	
1.1	Overview of Molecular Cloud Observations	3
1.2	Observational Techniques Applied to GMCs	5
1.2.1	Molecular Line Emission	5
1.2.2	Dust Emission	6
1.2.3	Dust Absorption	6
1.3	Magnetic Support and the Star Formation Efficiency Problem.	7
1.4	Scaling Relations	9
1.5	GMCs and the Large-Scale ISM	12
1.6	Summary: Key Observational Constraints for Simulations	14
	References.	14
2	The Numerical Tools for Star Cluster Formation Simulations. . . .	17
	Cathie J. Clarke	
2.1	The Pure Gravitational Problem	18
2.2	Hydrodynamical Problems: A Quick Guide to SPH.	21
2.3	Adding ‘More Physics’ to Hydrodynamical Codes	23
2.4	Summary	28
	References.	29

3	The Comparison of Observational and Simulation Data	31
	Cathie J. Clarke	
3.1	The Characterisation of Observational and Simulated Data.	31
3.1.1	Characterising Gaseous Structures.	31
3.1.2	Characterising Stellar Distributions	33
3.1.3	Characterising the IMF	36
3.2	Simulation Results: Bonnell et al. (2008) as a Case Study	37
3.3	The Relationship Between Gas, Cores and Stars in Simulations	40
3.4	The Origin of the Stellar IMF in ‘Vanilla’ Calculations	40
3.5	Summary	44
	References.	44
4	The Role of Feedback and Magnetic Fields	47
	Cathie J. Clarke	
4.1	Varying the Parameters	47
4.2	Putting in More Physics.	50
4.2.1	Thermal Feedback.	50
4.2.2	Outflows	54
4.2.3	Magnetic Fields	54
4.2.4	Ionising Radiation.	56
4.3	Discussion	58
4.4	Summary	59
	References.	60
5	The Formation of Multiple Systems in Clusters	61
	Cathie J. Clarke	
5.1	The Formation of Multiple Stars in ‘Vanilla’ Simulations	63
5.1.1	Binary Star Statistics	63
5.1.2	Disc Orientation in Protobinaries	65
5.1.3	Predictions for Higher-Order Multiples	68
5.2	The Effect of ‘Additional Physics’ on Multiple Star Formation	69
5.3	Summary	70
	References.	70
6	The Role of N-body Dynamics in Early Cluster Evolution	73
	Cathie J. Clarke	
6.1	Mass Segregation	73
6.2	The Destruction of Binaries in Clusters	75
6.3	Stellar Dynamics Plus Gas: Stellar Collisions	79
6.4	Stellar Dynamics with Gas Removal: Infant Mortality	80
6.5	Summary	85
	References.	85

7	Concluding Issues	89
	Cathie J. Clarke	
7.1	Modelling Individual Clusters.	89
7.1.1	Gas-Free Studies.	89
7.1.2	Embedded Star-Forming Regions	91
7.2	Imprint of Cluster Origin on Field Star Populations.	93
7.3	Imprint of Cluster Birthplace on Discs.	96
7.4	The Birth Environment of the Sun	97
7.5	Summary.	100
	References.	100

Part II Kinematics of Star Clusters and Associations

8	Introduction to Open Clusters	105
	Robert D. Mathieu	
8.1	Introduction	105
8.2	Classical Open Clusters	105
8.2.1	Definition	105
8.2.2	Global Properties	107
8.2.3	Internal Properties.	113
8.2.4	OB Associations.	118
8.3	Closing Thought.	121
	References.	121
9	Overview of Multiple Star Systems	123
	Robert D. Mathieu	
9.1	Introduction	123
9.2	Field Solar-Type Binary Population.	123
9.3	Field OB Binary Population	128
9.4	Open Cluster Solar-Type Binary Population	131
9.5	Closing Thoughts	134
	References.	135
10	Overview of Collisional Stellar Dynamics	137
	Robert D. Mathieu	
10.1	Introduction	137
10.2	Timescales	138
10.3	Violent Relaxation	140
10.4	Energy Equipartition and Mass Segregation	141
10.5	Evolution of Dynamical Systems: Some Fundamental Physics	141

10.6	Evolution of Dynamical Systems: Two-Body Processes	142
10.7	Evolution of Dynamical Systems: Cluster Dissolution	145
	References.	146
11	λ Ori: A Case Study in Star Formation	147
	Robert D. Mathieu	
11.1	Introduction	147
11.2	Overview.	147
11.3	Dust and Molecular Gas	149
11.4	Massive Stars	150
11.5	Low-Mass Stars	151
	11.5.1 H α Emission and Objective Prism Surveys.	151
	11.5.2 Lithium Absorption and Multi-Object Spectroscopic Surveys	152
	11.5.3 Photometric Surveys	154
11.6	Analysis of a Star-Forming Region	156
	11.6.1 Distance	157
	11.6.2 Spatial Distribution of Star Formation	157
	11.6.3 Initial Mass Function.	157
	11.6.4 Total Stellar Population	159
	11.6.5 Accretion Disc Evolution.	159
	11.6.6 Age Distribution	159
11.7	The Star Formation History of λ Ori	161
11.8	Final Thought.	162
	References.	162
12	Overview of Star-Forming Regions	165
	Robert D. Mathieu	
12.1	Introduction	165
12.2	Taurus-Auriga	165
12.3	Orion Molecular Cloud	169
12.4	Young Embedded Clusters.	172
	References.	177
13	Kinematics of Star-Forming Regions	179
	Robert D. Mathieu	
13.1	Introduction	179
13.2	OB Associations After <i>Hipparcos</i>	181
13.3	Kinematics in Star-Forming Associations	182
13.4	Stellar Kinematics in Young Star Clusters	187
	References.	189

14 Pre-main-sequence Binaries	191
Robert D. Mathieu	
14.1 Introduction	191
14.2 Pre-main-sequence Binary Frequency	192
14.2.1 Definition	192
14.2.2 Frequency as a Function of Star-Forming Region	192
14.2.3 Frequency as a Function of Orbital Period	193
14.2.4 Higher-Order Multiplicity	194
14.2.5 Protobinaries	195
14.3 Pre-main-sequence Binaries and Disc Evolution	196
14.4 Concluding Thought	201
References.	201

Part III From Whence the Field?

15 Galactic Demographics: Setting the Scene	205
I. Neill Reid	
15.1 Introduction	205
15.2 The Nature of the Milky Way	206
15.3 The Milky Way as a Galaxy: Large-Scale Properties	209
15.4 Star Formation in the Milky Way	214
15.5 Stellar Abundances	218
15.6 The Sun’s Place in the Milky Way	220
References.	222
16 The Solar Neighbourhood	225
I. Neill Reid	
16.1 Introduction: Act Locally, Think Globally	225
16.2 The Local Volume and Local Samples	226
16.3 The Stellar Luminosity Function.	231
16.4 Stellar Multiplicity	233
16.5 The Stellar Mass Function: Present Day and Initial	238
16.6 Is There a Universal IMF?	242
16.7 Summary	247
References.	256
17 Stellar Kinematics and the Dynamical Evolution of the Disc	259
I. Neill Reid	
17.1 Introduction	259
17.2 Building Stellar Kinematics as a Discipline	259
17.3 Kinematics of Local Stars	264

17.4	Star Streams and Moving Groups	269
17.5	Stellar Migration, Radial Mixing and the Galactic Bar	273
17.6	Summary	276
	References.	276
18	Clusters and the Galactic Halo	279
	I. Neill Reid	
18.1	Introduction	279
18.2	Globular Clusters and the Galactic Halo	279
18.3	Setting the Context	283
18.4	The ELS Model	286
18.5	Searle and Zinn and Galaxy Mergers.	289
18.6	Globular Clusters Revisited	292
18.7	Endword	297
	References.	298
19	Star Formation over Time.	301
	I. Neill Reid	
19.1	Introduction	301
19.2	The Structure of the Disc.	301
19.3	Measuring Stellar Ages	305
	19.3.1 Ages for Stars in Clusters	305
	19.3.2 Ages for Individual Stars	306
19.4	The Age-Metallicity Relation and the Age Distribution of Local Stars.	310
	19.4.1 Stellar Metallicities	311
	19.4.2 The Age-Metallicity Relation	312
	19.4.3 The Age Distribution in the Disc	314
19.5	Summary	315
	References.	316
20	Where Do Stars Form?	317
	I. Neill Reid	
20.1	Introduction	317
20.2	OB Associations	318
20.3	The Taurus-Auriga Cloud	319
20.4	Young Stars Near the Sun	321
20.5	Clustered Star Formation: Open and Embedded Clusters	323
	20.5.1 Open Clusters.	323
	20.5.2 Infrared Astronomy and the Detection of Embedded Clusters	325
	20.5.3 Statistics of Embedded Clusters	326
20.6	Summary and Future Prospects.	328
	References.	333

21	Where Was the Sun Born?	335
	I. Neill Reid	
21.1	Introduction	335
21.2	The Age of the Sun	336
21.3	The Sun’s Chemical Composition	338
21.4	The Characteristics of the Solar System	340
21.5	The Sun’s Natal Environment.	342
21.6	Can We Find the Sun’s Companions?	345
21.7	Summary and Conclusions.	346
	References.	347
