List of contributing authors — V

About the editor — VII

Preface — VIII

Sanjay M. Mahajani and Basudeb Saha

1 Catalysis in Multifunctional Reactors — 1

- 1.1 Introduction — 1
- 1.2 Reactive Distillation (RD) — 1
 - 1.2.1 Homogeneous catalysis — 2
 - 1.2.2 Heterogeneous catalysis — 3
 - 1.2.3 Catalysts used in reactive distillation — 8
- 1.3 Reactive Stripping — 13
 - 1.3.1 Esterification — 14
 - 1.3.2 Aqueous phase reforming (APR) of sorbitol — 17
 - 1.3.3 Dehydration of xylose to furfural — 17
 - 1.3.4 Catalytic exchange of hydrogen isotopes — 18
- 1.4 Catalytic membrane reactors — 19
 - 1.4.1 Biodiesel production — 20
 - 1.4.2 Dehydrogenation — 24
 - 1.4.3 Oxidative coupling of methane (OCM) — 25
 - 1.4.4 Partial oxidation of methane to synthesis gas — 26
- 1.5 Chromatographic Reactor — 26
 - 1.5.1 Concept of a Chromatographic Reactor — 27
 - 1.5.2 Types of Chromatographic Reactor — 28
 - 1.5.3 Applications of Liquid Chromatographic Reactor — 34
- 1.6 Summary — 41

Goran T. Vladisavljević

2 Biocatalytic membrane reactors (BMR) — 51

- 2.1 Introduction — 52
- 2.2 Role of membrane in biocatalytic membrane reactors (BMRs) — 52
- 2.3 Membrane separation reactors (MSRs) — 57
 - 2.3.1 Concept — 57
 - 2.3.2 Application — 60
- 2.4 Membrane aeration bioreactors (MABR) — 64
- 2.5 Extractive membrane bioreactors (EMBR) — 65
 - 2.5.1 Concept — 65
 - 2.5.2 Application — 67

2.6	Enzyme immobilization techniques in membrane reactor systems —	70
2.6.1	Physical adsorption —	72
2.6.2	Entrapment —	72
2.6.3	Cross-linking —	73
2.6.4	Encapsulation —	73
2.6.5	Segregation by membranes —	77
2.6.6	Covalent binding —	77
2.7	Laminated (multilayer) enzyme membrane reactors —	81
2.7.1	Concept —	81
2.7.2	Application —	83
2.8	Biphasic (multiphase) membrane bioreactors —	86
2.8.1	Concept —	86
2.8.2	Application —	88
2.9	Phase transfer catalysis in multiphase membrane reactors —	92
2.9.1	Concept —	92
2.9.2	Application —	93
2.10	Conclusions —	94

Elnaz Shahbazali, Volker Hessel, Timothy Noël, and Qi Wang

3	Metallic nanoparticles made in flow and their catalytic applications in micro-flow reactors for organic synthesis —	103
3.1	Introduction —	103
3.2	Metal nanoparticles in a microfluidic reactor —	105
3.2.1	Gold —	105
3.2.2	Silver —	114
3.2.3	Palladium —	117
3.2.4	Platinum —	120
3.2.5	Copper —	122
3.3	Metal nanoparticles in a millifluidic reactor —	123
3.4	Outlook – metal nanoparticles generated in flow and used <i>in situ</i> —	127
3.5	Conclusions —	128

Stanislav Y. Ivanov and Ajay K. Ray

4	Application of multi-objective optimization in the design and operation of industrial catalytic reactors and processes —	134
4.1	Introduction —	134
4.2	Multi-objective optimization —	136
4.2.1	Concept of multi-objective optimization —	136
4.2.2	MOO methods —	137
4.3	No-preference methods —	138
4.3.1	Neutral compromised solution —	138

4.4	<i>A priori</i> methods — 139
4.4.1	Method of Weighted global criterion — 139
4.4.2	Lexicographic method — 140
4.4.3	Goal Programming (GP) — 141
4.5	<i>A posteriori</i> methods — 141
4.5.1	ε -Constraint Method — 141
4.6	Interactive methods — 142
4.7	Genetic algorithms — 142
4.7.1	About binary-coded variables — 143
4.7.2	Simple Genetic Algorithm (SGA) — 144
4.7.3	Use of GA in MOO — 145
4.7.4	Constraint handling in GA — 146
4.8	Simulated annealing — 148
4.9	MOO problems in chemical engineering — 148
4.9.1	Petroleum Processing Engineering — 149
4.9.2	Steam Reforming — 150
4.9.3	Polymer industry — 152
4.10	Conclusions — 168

Volkan Degirmenci and Evgeny V. Rebrov

5	Design of catalytic micro trickle bed reactors — 174
5.1	Introduction — 175
5.2	Hydrodynamics — 179
5.2.1	Flow regimes — 179
5.2.2	Pressure drop — 187
5.2.3	Liquid holdup — 191
5.2.4	Flow maldistribution and start-up effects — 193
5.2.5	Axial dispersion — 194
5.3	Mass and heat transfer in micro trickle bed reactors — 197
5.3.1	Mass transfer — 197
5.3.2	Heat transfer — 201
5.3.3	Scale up — 204
5.4	Periodic operation — 206
5.5	Applications — 207
5.5.1	Micro trickle bed reactors — 208
5.5.2	Semi-structured and structured trickle bed reactors — 212
5.6	Outlook — 212

Joseph Wood

6	Three-phase catalytic reactors for hydrogenation and oxidation reactions — 220
6.1	Introduction — 222

6.2	Slurry Reactors — 223
6.2.1	Theory: Determination of Controlling Resistance — 223
6.2.2	Mixing and mass transfer in the stirred tank slurry reactor — 226
6.2.3	Hydrogenation reactions in the stirred tank slurry reactor: kinetics and effect of operating variables — 235
6.2.4	Catalysts for hydrogenation reactions: overview and novel biomass supported metal catalysts — 238
6.2.5	Oxidation reactions in the slurry reactor — 245
6.2.6	Bubble column reactors — 248
6.3	Trickle bed reactors — 253
6.3.1	Theory and flow regimes — 253
6.3.2	Overall rate model — 255
6.3.3	Imaging of gas-liquid flows — 256
6.3.4	Scale up and modeling — 258
6.3.5	Enantioselective Hydrogenation reactions — 261
6.3.6	Industrial applications in heavy oil upgrading — 264
6.4	Structured monolith reactors — 267
6.4.1	Flow patterns in the single capillary — 268
6.4.2	Applications in hydrogenation reactions — 271
6.5	Conclusions — 274

Tuuvo Kilpiö, Vincenzo Russo, Kari Eränen, and Tapio Salmi

7	Design and modeling of laboratory scale three-phase fixed bed reactors — 283
7.1	Background — 285
7.2	Reactor set-up — 287
7.3	Physical and chemical phenomena in fixed bed reactors — 288
7.3.1	Overview — 288
7.4	Research targets and topics — 289
7.4.1	Catalyst selection — 289
7.4.2	Reaction kinetics — 290
7.4.3	Mass transfer effects — 290
7.4.4	Heat effects — 290
7.4.5	Physical properties of gases and liquids — 290
7.4.6	Reactor design and operation policy — 290
7.4.7	Modeling options — 291
7.5	Experimental design — 291
7.5.1	Targeted products — 292
7.5.2	Catalyst screening — 292
7.5.3	Experimental productivity and selectivity optimization — 292
7.5.4	Particle geometry — 293
7.5.5	Feed distribution and flow regimes — 293

7.5.6	Bed dilution —	294
7.5.7	Residence time distribution —	294
7.6	Chemical kinetics —	295
7.6.1	Topics of the kinetic studies —	295
7.6.2	Reaction scheme simplifications —	295
7.6.3	Rate expressions —	296
7.6.4	Qualitative reaction rate comparison: fixed bed against batch reactors —	297
7.6.5	Catalyst deactivation —	298
7.6.6	Truly intrinsic kinetics —	299
7.7	Mass and heat transfer effects —	299
7.7.1	Mass transfer resistances —	299
7.7.2	Gas-liquid mass transfer —	300
7.7.3	Liquid-solid mass and heat transfer —	301
7.7.4	Internal diffusion – pore diffusion —	302
7.7.5	Effectiveness factors for particles —	303
7.8	Physical properties of gas mixtures and solutions —	303
7.8.1	Density and viscosity —	303
7.8.2	Diffusivity —	304
7.8.3	Gas solubility —	305
7.8.4	Thermal conductivity —	305
7.8.5	Reaction enthalpy —	306
7.9	Liquid flow effects —	306
7.9.1	Qualitative flow arrangement comparison —	306
7.9.2	External wetting of the catalyst —	307
7.9.3	Radial flow —	307
7.9.4	Pressure drop —	308
7.9.5	Liquid saturation (hold-up) —	309
7.10	Reactor modeling steps —	311
7.10.1	Overview —	311
7.10.2	Selected modeling policy —	311
7.10.3	Studies of simplified reaction systems —	311
7.10.4	Ways how to rule out phenomena by experimental design —	312
7.10.5	Sensitivity studies —	312
7.11	Balances for the generic three-phase fixed bed model —	312
7.11.1	Mass balances for gas, liquid and solid phases —	312
7.11.2	Energy balances for gas-, liquid- and solid phases —	313
7.11.3	Boundary conditions —	314
7.11.4	Sub-model examples —	315
7.12	Axial dispersion modeling and experiments —	315
7.12.1	Classical axial dispersion model —	315
7.12.2	Alternative modeling approaches for back-mixing —	316

7.13	Numerical strategies — 316
7.13.1	Model classification — 316
7.13.2	Benefits of dynamic models — 317
7.13.3	Solvers and solution algorithms — 317
7.13.4	Numerical method of lines — 318
7.13.5	Hoyos method for particles — 318
7.13.6	Parameter optimization methods — 319
7.13.7	Parameter number reduction — 319
7.14	Scale-up issues of fixed beds — 320
7.14.1	Overview — 320
7.14.2	Large scale operation — 320
7.14.3	Gradients in scale up — 321
7.14.4	Flow regime in scale-up — 321
7.14.5	Back mixing in scale-up — 321
7.15	Examples — 322
7.15.1	Citral hydrogenation — 322
7.15.2	Direct synthesis of hydrogen peroxide — 323
7.16	Conclusions — 327

Index — 333
