Contents

Preface —— V
List of Tables —— XIII
List of Figures —— XV
List of symbols and abbreviations —— XXIII

1 **Introduction —— 1**
1.1 Background —— **1**
1.2 Research motivation —— **2**
1.3 Characteristics of FSOC —— **5**
1.3.1 Directionality of the light beam —— **5**
1.3.2 Form factors, i.e. size and power per bit —— **5**
1.3.3 Ability to be operated license-free worldwide and quick installation —— **6**
1.3.4 Wavelength selection criteria —— **6**
1.3.5 Challenges and limitations —— **7**
1.4 Applications and advantages —— **7**
1.5 Research objectives —— **8**
1.6 Original contributions – newness and achievements —— **8**
1.7 Thesis organization —— **9**

2 **Real-time measurement of meteorological parameters for estimating low altitude atmospheric turbulence strength (C_n^2) —— 13**
2.1 Introduction —— **13**
2.2 Background and related works —— **14**
2.3 Field test experimental setup and measurement protocol —— **16**
2.4 Sensor interfacing architectures and data acquisition protocols —— **18**
2.4.1 Wind speed measurement – cup anemometer —— **19**
2.4.2 Relative humidity and temperature measurement – SHT11 Sensor —— **21**
2.4.3 Absolute pressure measurement – SCP1000-D01 sensor —— **24**
2.5 Communication protocol and frame format —— **29**
2.6 Performance calibration of the proposed measurement system —— **31**
2.7 Atmospheric turbulence strength (C_n^2) estimation —— **34**
2.8 Experimental results and discussions —— **36**
2.8.1 Data for 28th December 2012, winter —— **37**
2.8.2 Data for 5th March 2013, presummer —— **39**
2.8.3 Data for 17th May 2013, summer —— **39**
2.8.4 Data for 13th June 2013, monsoon —— **41**
2.8.5 Data for 16th November 2013, rainy —— **43**

2.9 Advantages — 44
2.10 Summary — 44

3 Comparison of different models for ground-level atmospheric attenuation and turbulence strength (C_n^2) prediction with new models according to local weather data for FSO applications — 47
3.1 Introduction — 47
3.2 Background and related works — 51
3.3 Experimental setup and description of optoelectronic assembly — 53
3.4 Comparison models of atmospheric influence on optical propagation — 54
3.4.1 Atmospheric attenuation — 55
3.4.2 Atmospheric optical turbulence strength — 58
3.5 Formulation of the mathematical model — 60
3.5.1 Atmospheric attenuation — 60
3.5.2 Atmospheric turbulence strength (C_n^2) from meteorological measurements — 63
3.6 Experimental results and data analysis — 67
3.6.1 Comparison of the predicted attenuation data with measured values — 67
3.6.2 Comparison of predicted C_n^2 data with measured values — 80
3.7 Summary — 92

4 Mitigation of beam wandering due to atmospheric turbulence and prediction of control quality using intelligent decision making tools — 93
4.1 Introduction — 93
4.2 Background and related works — 95
4.3 FSO link – optoelectronic assembly and setup description — 97
4.4 Steady state response analysis — 100
4.4.1 Optoelectronic position detector — 100
4.4.2 Piezo driving amplifier — 101
4.4.3 Piezoelectric actuators — 101
4.5 Development of response surface models — 103
4.6 Development of the neural network model — 105
4.7 Experimental results and discussion — 109
4.7.1 Verification and validation of RSM and neural-controller model — 109
4.7.2 Behavioral study of neural-controller in beam alignment — 113
4.7.3 Analysis of receiver signal quality improvement — 114
4.8 Summary — 115

5 **Low power and compact RSM and neural-controller design for beam wandering mitigation with a horizontal-path propagating Gaussian-beam wave: focused beam case — 117**
5.1 Introduction — **117**
5.2 Background and related works — **119**
5.3 Experimental plant configuration and centroid error computation — **120**
5.4 Formulation and implementation of direct controller — **122**
5.5 Hardware architecture and implementation of the neural-controller — **124**
5.5.1 Clock manager unit — **128**
5.5.2 Signal digitization and data preprocessing unit — **128**
5.5.3 Weight and bias memory management circuit — **130**
5.5.4 Neuron unit — **131**
5.5.5 Data Routing Ring Circuit (DRRC) — **132**
5.5.6 Multiply-Accumulator unit (MAC) — **134**
5.5.7 Serial communication manager — **135**
5.6 Experimental results and discussion — **136**
5.6.1 Control schemes validation and evaluation in open loop decision-making — **136**
5.6.2 Performance study of closed loop experiment with intensity feedback control — **140**
5.6.3 Analysis of beam spot auto alignment and reduction of wandering — **143**
5.6.4 Behavioral study of effective scintillation index and impulse response — **144**
5.7 Summary — **146**

6 **Quality metrics and reliability analysis of ground-to-ground free space laser communication in different weather conditions together with beam steering system — 149**
6.1 Introduction — **149**
6.2 Background and related works — **154**
6.3 Theory and numerical technique for channel effect and BER evaluation — **156**
6.4 Simplex data transmission experimental setup and its description — **159**
6.5 Experimental results and data analysis — **161**
6.5.1 Comparative evaluation of received signal statistics — **162**
6.5.2 Impact validation of beam wandering compensation system — **166**

6.5.3 Quantitative analysis of atmospheric turbulence effects on communication parameters – improvement and reliability — **170**
6.6 Summary — **173**

7 Conclusions and future work — 175
7.1 Conclusions — **175**
7.2 Future work — **178**

References — 183
Index — 201
