Nomenclature	XI
List of Figures	XIII
1 Introduction	1
1.1 Numerical simulation of hydro- and environmental systems .	1
1.2 Why urban surface water systems?	3
1.3 Why Berlin?	6
1.4 Why multi-dimensional modeling?	10
1.5 Study objectives	11
1.6 Organization of this work	11
2 Numerical Modeling of Surface Water Systems	13
2.1 Model choice	13
2.1.1 Model testing	14
2.1.2 Model dimensions	15
2.1.3 Modeling systems	18
2.2 Grid Generation	19
2.2.1 Introduction	19
2.2.2 Delaunay-Voronoi Method (DVM)	21
2.2.3 Advancing Front Method (AFM)	21
2.2.4 Grid quality	22
2.3 Discretization Methods	23
2.3.1 Introduction	23
2.3.2 Time discretisation	24
2.3.3 Space discretisation	27

2.3.4	Initial and boundary conditions	32
3	Modeling System	35
3.1	TELEMAC modeling system	35
3.1.1	Introduction	35
3.1.2	TELEMAC-2D	39
3.1.3	TELEMAC-3D	41
3.1.4	Pre- and postprocessing	45
3.2	Grid generator JANET	46
4	Multi-dimensional Numerical Simulation of Hydrodynamics and Transport Processes in the Spree	47
4.1	Project area and computational domains	47
4.2	Computational domain A	52
4.2.1	2D simulations of hydrodynamics for mean discharge condition	54
4.3	Computational domain B	61
4.3.1	2D simulations of hydrodynamics and transport for mean discharge condition	63
4.3.2	2D simulations of transport for variable discharge conditions	68
4.3.3	Investigation of the diffusivity	72
4.3.4	3D simulation of hydrodynamics and transport	76
5	Multi-dimensional Numerical Simulation of Hydrodynamics and Transport in the Unterhavel	83
5.1	Project area and computational domain	83
5.2	Grid generator JANET and pre-processing stage	86
5.3	2D simulation of hydrodynamics	92
5.3.1	Investigation of mean discharge condition	92
5.3.2	Investigation of high discharge condition	105
5.4	2D simulation of transport processes	109
5.4.1	Investigation of mean discharge condition	109
5.4.2	Investigation of the diffusivity	121

5.4.3	Investigation of high discharge condition	127
5.5	3D simulation of hydrodynamics and transport processes . . .	132
5.5.1	3D grid	132
5.5.2	Investigation of mean discharge condition	138
5.6	Multi-dimensional simulation of wind-driven flow and trans- port processes	148
5.6.1	Conceptual approach and wind data	148
5.6.2	Results of 2D simulations	152
5.6.3	Results of 3D simulations	159
6	Conclusions and Outlook	171
6.1	Conclusions	171
6.2	Outlook	174
	Bibliography	175
