

# Contents

<b>1</b>	<b>Introduction to Network Radar Countermeasure Systems . . . . .</b>	<b>1</b>
1.1	Introduction . . . . .	1
1.2	Overview of a Network Radar Countermeasure System . . . . .	6
1.2.1	Working Principle of a Network Radar Countermeasure System . . . . .	7
1.2.2	Working Mode of the Network Radar Countermeasure System . . . . .	11
1.3	Configuration of the Network Radar Countermeasure System . . . .	14
1.3.1	Annular Configuration . . . . .	14
1.3.2	Linear Configuration . . . . .	15
1.3.3	Zone Configuration . . . . .	16
1.4	Performance of Network Radar Countermeasure Systems . . . . .	17
1.4.1	Reconnaissance Detection Area of the Active Mode . . . . .	17
1.4.2	Reconnaissance Detection Area in Passive Mode . . . . .	25
1.4.3	Reconnaissance Detection Area in the Integrated Active-Passive Mode . . . . .	28
1.4.4	Reconnaissance Detection Area in Jamming Conditions . . . . .	29
1.4.5	Jamming and Suppression Area of the Network Radar Countermeasure System . . . . .	35
1.4.6	Fuzzy Function in the Mode of Reconnaissance Detection . . . . .	44
<b>2</b>	<b>Target Positioning of Network Radar Countermeasure Systems . . . . .</b>	<b>67</b>
2.1	Introduction . . . . .	67
2.2	Active Mode Target Location . . . . .	68
2.2.1	Multiple Transmitter One Receiver Mode . . . . .	68
2.2.2	One Transmitter Multiple Receiver Mode and Multiple Transmitter Multiple Receiver Mode . . . . .	88

2.3	Target Location in the Passive Mode . . . . .	114
2.3.1	Acquisition of Location Solution . . . . .	114
2.3.2	Location Error Analysis . . . . .	116
2.3.3	Cramér–Rao Bound of Target Location Estimation . . . . .	117
2.3.4	Simulation and Analysis . . . . .	119
2.4	Integration of the Active and Passive Modes for Target Location . . . . .	124
<b>3</b>	<b>Network Radar Countermeasure Systems for Target Recognition . . . . .</b>	<b>131</b>
3.1	Introduction . . . . .	131
3.2	Target Recognition with Single Station in Network Radar Countermeasure System . . . . .	133
3.2.1	The Basic Probability Assignment Calculation of Target Recognition . . . . .	134
3.2.2	Target Recognition Based on D–S Evidence Theory . . . . .	139
3.2.3	Single Station Target Identification . . . . .	143
3.3	Network Center Comprehensive Target Recognition . . . . .	155
3.3.1	Evidence Weighted Processing of Central Station . . . . .	157
3.3.2	Recognition Framework Adjustment of Central Station . . . . .	158
3.3.3	Integrated Identification Example of Central Station . . . . .	159
<b>4</b>	<b>Target Tracking of Network Radar Countermeasure Systems . . . . .</b>	<b>163</b>
4.1	Introduction . . . . .	163
4.2	Target Motion Model . . . . .	163
4.2.1	Uniform Motion Model . . . . .	164
4.2.2	Uniformly Accelerated Motion Model . . . . .	165
4.2.3	Singer Model . . . . .	166
4.2.4	The Turning Model of Maneuvering Targets . . . . .	168
4.3	Tracking Filtering Algorithm . . . . .	169
4.3.1	Information Filter . . . . .	169
4.3.2	Non-linear Filtering Algorithm . . . . .	170
4.3.3	Adaptive Filtering Algorithm . . . . .	174
4.4	Tracking Filter Form . . . . .	177
4.4.1	Collect Data . . . . .	177
4.4.2	Centralized Processing Filter Form . . . . .	178
4.4.3	The Filter Form of Distributed Processing . . . . .	181
4.5	Joint Probabilistic Data Association Algorithm . . . . .	184
4.5.1	The Optimal Joint Probability Data Association Algorithm . . . . .	186
4.5.2	The Simple Joint Probabilistic Data Association Algorithm . . . . .	190
4.5.3	Associated Algorithm of the Joint Probability Data with the Probability-Weighted Summation Equal to 1 . . . . .	193
4.5.4	Improved Associated Algorithm of the Joint Probability Data . . . . .	195

- 4.6 Tracking Multiple Targets by Multiple Receiving Stations . . . . . 197
  - 4.6.1 The Joint Probabilistic Data Association Algorithm of Parallel Multiple Receiving Stations . . . . . 197
  - 4.6.2 Joint Probabilistic Data Association Algorithm of Ordered Multiple Receiving Stations . . . . . 198
  - 4.6.3 Simulation and Analysis . . . . . 200
- 5 Network Radar Countermeasure Systems . . . . . 243
  - 5.1 Introduction . . . . . 243
  - 5.2 The Pretreatment of a Network Radar Countermeasure System . . . . . 244
    - 5.2.1 The Space Calibration Network Radar Countermeasure System . . . . . 244
    - 5.2.2 Time Calibration of the Network Radar Countermeasure System . . . . . 248
  - 5.3 Hubs Associated Target Track . . . . . 249
    - 5.3.1 Identity Information Associated with the Target Track . . . . . 250
    - 5.3.2 Fuzzy Comprehensive Decision of Track Correlation . . . . . 253
    - 5.3.3 Evidence Track Association Algorithm of Fuzzy Comprehensive Decision . . . . . 260
  - 5.4 Track Fusion Network Radar Countermeasure System . . . . . 267
    - 5.4.1 Simple Track Fusion and Cross-Covariance Combination Track Fusion . . . . . 267
    - 5.4.2 Covariance Intersection Fusion . . . . . 270
- 6 Four Countermeasure Capacity Analysis of Network Radar Countermeasure Systems . . . . . 273
  - 6.1 Network Radar Countermeasure System Anti-jamming Performance Analysis . . . . . 273
    - 6.1.1 Anti-active Blanket Jamming . . . . . 274
    - 6.1.2 Resistance to Active Deception Jamming . . . . . 280
  - 6.2 The Performance Analysis of Network Radar Countermeasure System on Anti-stealth . . . . . 283
    - 6.2.1 Passive Work Mode for Anti-stealth . . . . . 284
    - 6.2.2 Selection of Proper Frequency Increasing Anti-stealth Capability . . . . . 285
    - 6.2.3 Sending and Receiving Allocation and Data Sharing Improve Anti-stealth Capability . . . . . 286
  - 6.3 Anti-radiation Attack Performance Analysis of a Network Radar Countermeasure System . . . . . 288
    - 6.3.1 The Advantage of the Network Radar against Anti-surveillance System and Anti-radiation Weapons . . . . . 288
    - 6.3.2 Anti-destroying Capability Analysis . . . . . 290

- 6.4 Network Radar Countermeasure System Against Anti-Low-Altitude Penetration Performance Analysis . . . . . 294
  - 6.4.1 Bi-static Radar Increasing the Detection Range . . . . . 294
  - 6.4.2 Passive Detection Improves the Low-Altitude Target Detection Capability . . . . . 296
- Bibliography . . . . . 299**
