

Contents

	Introduction.....	11
1	Physical characterisation of pigments.....	13
1.1	Particle morphology.....	13
1.2	Crystal structure	15
1.2.1	Crystal modifications: polymorphism.....	15
1.2.2	Isomorphism and anisotropy	16
1.2.3	X-ray crystallography	17
1.3	Particle size measurement.....	20
1.3.1	Particle size distribution	21
1.3.1.1	Sieve analysis.....	21
1.3.1.2	Determination by electron microscopy.....	22
1.3.1.3	Analysis by sedimentation techniques.....	22
1.3.1.4	Optical methods.....	24
1.3.1.5	Ultrasonic attenuation spectroscopy.....	26
1.3.1.6	Electroacoustic methods	27
1.3.1.7	The Coulter counter	27
1.3.1.8	Methods of presenting results	27
1.3.2	Specific surface area	29
1.3.2.1	The Freundlich adsorption isotherm	29
1.3.2.2	Langmuir's adsorption theory.....	30
1.3.2.3	The adsorption isotherm according to Brunauer, Emmett and Teller.....	32
1.3.2.4	Determination of the average particle size	34
1.4	Surface character	37
1.4.1	Polarity and hydrophilicity	37
1.4.2.1	Surface tension.....	39
1.4.2.2	Capillarity	45
1.4.3	Electrical polarisability.....	47
1.4.3.1	Polarisation of dielectrics in an electric field.....	47
1.4.3.2	Polarisability and refractive index	48
1.4.3.3	Polarisability and pigment/binder-interaction	49
1.4.4	Surface treatment.....	50

2	Optical properties of pigmented systems.....	53
2.1	Reflection, gloss and gloss haze	54
2.1.1	Gloss.....	54
2.1.2	Gloss haze	59
2.2	Light scattering by colloidal disperse particles	60
2.2.1	Rayleigh scattering.....	61
2.2.2	Mie theory.....	63
2.3	Absorption and scattering as factors in the tinctorial properties of pigments.....	69
2.3.1	Hiding power, semi-transparency and transparency	69
2.3.2	Lightening power	78
2.3.3	Tinting strength and depth of shade	79
2.3.4	Hue (or shade)	81
3	Rheological behaviour of pigment dispersions	85
3.1	Introduction.....	85
3.2	Newton's law of viscosity	85
3.3	Dependence of viscosity on temperature	88
3.4	Flow properties of concentrated suspensions and molecular colloids	90
3.4.1	Newtonian flow	91
3.4.2	Structural viscosity (pseudoplasticity).....	92
3.4.3	Dilatancy	94
3.4.4	Plasticity	95
3.4.4.1	Bingham or linear-plastic flow.....	96
3.4.4.2	Non-linear plasticity (Casson viscosity)	97
3.4.4.3	Plastic-dilatant flow	100
3.4.5	Shear-time dependent flow.....	101
3.4.5.1	Thixotropy	101
3.4.5.2	Rheopexy	103
3.4.6	Viscoelasticity	104
3.4.6.1	Effect principles	104
3.4.6.2	Effect of molecular structure	106
3.4.7	Flow behaviour of water-thinnable binder systems	107
3.5	Rheological behaviour of pigmented systems in practice	108
3.5.1	Basic aspects	108
3.5.2	Printing inks	111
3.5.3	Paints and enamels	114

3.5.4	Plastics	117
3.6	Closing remarks	118
4	Dispersion process: physico-chemical fundamentals	119
4.1	Introduction.....	119
4.2	Stages of the dispersion process	120
4.2.1	Mechanical breakdown.....	120
4.2.1.1	Forces of interaction between the pigment particles	120
4.2.1.2	Types of mechanical breakdown	123
4.2.2.1	Energetic approach.....	125
4.2.2.2	Wetting kinetics	128
4.2.3	Stabilisation	130
4.2.3.1	Fundamental aspects.....	130
4.2.3.2	Stabilisation by steric hindrance.....	130
4.2.3.3	Electrostatic stabilisation: DLVO theory and zeta potential	143
4.2.3.4	Measuring Zeta potentials	147
4.3	Stabilisation problems with pigmented systems after dispersion.....	149
4.3.1	Flocculation	149
4.3.1.1	Fundamental aspects.....	149
4.3.1.2	Testing and measuring flocculation behaviour	151
4.3.1.3	Kinetic approach to flocculation	153
4.3.1.4	Coflocculation	155
4.3.1.5	Prevention of flocculation	156
4.3.2	Flooding and floating.....	156
4.3.2.1	Discussion and theoretical explanation.....	156
4.3.2.2	Testing separation phenomena. spray-pouring test and rub-out test	160
4.3.2.3	Methods for overcoming flooding and floating	161
4.3.3	Shock effects and seeding.....	164
4.3.3.1	Pigment shock	164
4.3.3.2	Binder shock	165
4.3.3.3	Solvent shock	166
4.3.3.4	Seeding	166
5	Dispersion process: methods and mathematical models for assessing the degree of dispersion.....	169
5.1	Introduction.....	169

5.2	Direct methods.....	169
5.2.1	Fineness-of-grind and dispersion curve.....	169
5.2.2	Examination with the optical microscope	173
5.3	Indirect methods	174
5.3.1	Tinting strength development	174
5.3.2	Assessment of the state of dispersion from gloss development ..	181
5.3.3	Increase in lightness flop	182
5.4	Concluding remarks	184
6	Dispersion process: mill base optimisation	185
6.1	General considerations.....	185
6.2	Description of the dispersion process by a probability function.....	188
6.2.1	Theoretical principles	188
6.2.2	Practical conclusions from the probability relationship for the dispersion process.....	192
6.3	Dispersibility of pigments.....	193
6.3.1	Critical approach to the definition of pigment dispersibility according to DIN ISO 18451-1.....	193
6.3.2	Testing and stating the dispersibility as specified in DIN EN ISO 8780 and DIN EN ISO 8781	193
6.3.3	Assessment of the dispersibility by means of a half-life value	195
6.3.4	Pragmatic definition for pigment dispersibility	197
6.4	Methods for mill base optimisation	203
6.4.1	Daniel flow-point procedure	203
6.4.2	Guggenheim factor.....	205
6.4.3	Efficiency of the dispersion process: new criterion for optimizing mill bases.....	206
6.4.4	Optimisation of several factors by means of an experimental design according to Plackett and Burman	211
6.4.5	Optimisation of the cost of the dispersion process by controlling energy input.....	214
	Appendix.....	218
	List of physical symbols and constants used	218
	List of relevant norms.....	221
	References	225
	Index.....	234
