Kurzfassung	iii
Abstract	v
1 Introduction and Overview	1
2 Radar Fundamentals	7
2.1 Signal Model	7
2.2 MTI for Airborne Radar Systems	9
2.3 Multichannel Processing	12
3 Sea Clutter	17
3.1 Water Waves	17
3.2 Scattering from Sea Surface	22
3.3 Doppler Frequency of Sea Scatterers	24
3.4 Scattering from Breaking Waves	25
4 Experiments with PAMIR	27
4.1 PAMIR System	27
4.2 Experiments	29
4.3 First Analysis	32
5 Theoretical Multichannel Analysis of Sea Clutter	37
5.1 Doppler Frequency	37
5.2 Cross-Covariance Matrix and Spectral Density Matrix	38
5.3 Space-Time Filter	44
5.4 Channel Correlation	48
5.5 Impact of Fast Scatterers	51

6	Multichannel Properties of Real and Simulated Data	57
6.1	Simulation Model	57
6.2	Estimation of Radial Sea Scatterer Velocity Variance	58
6.3	Comparison of Real and Simulated Data	60
6.4	Radial Sea Scatterer Velocity Variance of Real Data	67
6.5	Channel Correlation of Real Data	69
6.6	Real and Simulated Data with Fast Scatterers	74
7	Experiments with a Small Cooperative Boat	81
7.1	Experiments	81
7.2	Target Position in acquired Data	83
7.3	SCNR before and after Clutter Suppression	85
7.4	Detection Performance	90
8	Conclusion and Outlook	99
	List of Abbreviations	103
	List of Symbols	105
A	Boundary Conditions to Calculate Flow Velocity of Water Waves	109
B	Calculation of Scattering from Sea Surface	111
C	Change of Basis and Eigenvalues of the Clutter Spectral Density Matrix	115
D	Approximation of the Spectral Density Matrix with three Taylor terms	119
E	Perturbation Method for Eigenvalue Problems	121
