Volume 1

Foreword *XV*

Introduction *I*

- 1 Metals in Hydroformylation 5**
- 2 Organic Ligands 73**
- 3 Syngas and Alternative Syngas Sources 267**

Volume 2

- 4 Hydroformylation Reactions 285**
- 4.1 Hydroformylation of Unfunctionalized Monoolefins, Polyolefins, and Alkynes 285
 - 4.1.1 General Remarks 285
 - 4.1.2 Monoolefins 286
 - 4.1.2.1 Ethene 286
 - 4.1.2.2 Propene 286
 - 4.1.2.3 Butenes 288
 - 4.1.2.4 Higher Olefins 291
 - 4.1.3 Dienes and Polyenes 293
 - 4.1.3.1 1,3-Butadiene 293
 - 4.1.3.2 Substituted 1,3-Butadienes and Non-conjugated Polyenes 295
 - 4.1.4 Acetylene and Homolog Alkynes 298
- References 300
- 4.2 Hydroformylation of Functionalized Olefins 304
 - 4.2.1 General Aspects 304
 - 4.2.2 α -Functionalized Olefins 304

4.2.2.1	Vinyl Halogenides	305
4.2.2.2	Acyclic and Cyclic Vinyl Ethers, Vinyl Acetates, and Vinyl Carbonates	306
4.2.2.3	Vinyl Amines, Enamines, and Enamides	310
4.2.2.4	Vinyl Sulfoxides and Vinyl Sulfones	311
4.2.2.5	Acrylic Esters, Acryl Amides, and Acrylonitrile	311
4.2.3	β -Functionalized Olefins	313
4.2.3.1	General Remarks	313
	References	322
4.3	Stereoselective Hydroformylation	325
4.3.1	General Aspects	325
4.3.2	Diastereoselective Hydroformylation with Enantiopure Substrates	327
4.3.3	Asymmetric Hydroformylation	333
4.3.3.1	Terminal Monoolefins	333
4.3.3.2	<i>N</i> - and <i>O</i> -Heterocycles	351
4.3.3.3	Acyclic Internal Olefins	354
4.3.3.4	Alicyclic Olefins	356
4.3.3.5	1,3-Butadienes	356
4.3.4	Conclusions	359
	References	359
4.4	Scaffold-Directed Hydroformylation	362
4.4.1	Introduction	362
4.4.2	Covalently Bound Directing Phosphorus Groups	363
4.4.3	Reversibly Bound Directing Phosphorus Groups	369
4.4.4	Regiodirecting Effects without the Establishment of Covalent Interactions	375
4.4.5	Conclusions	377
	References	377
5	Tandem and Other Sequential Reactions Using a Hydroformylation Step	379
	References	380
5.1	Tandem Isomerization–Hydroformylation Reactions	380
5.1.1	General Remarks	380
5.1.1.1	The Mechanism	381
5.1.2	Metals	386
5.1.2.1	Cobalt Catalysts	386
5.1.2.2	Rhodium Catalysts	390
5.1.2.3	Ruthenium Catalysts	401
5.1.2.4	Platinum Catalysts	402
5.1.2.5	Palladium Catalysts	405
5.1.2.6	Iron Catalysts	407
5.1.3	Tandem Isomerization–Hydroformylation Reactions with Consecutive Steps	408

5.1.4	Conclusions	409
	References	409
5.2	Sequential Hydroformylation–Hydrogenation Reactions	416
5.2.1	General Remarks	416
5.2.2	Production of Alcohols in a Combined Hydroformylation–Hydrogenation Approach	416
5.2.2.1	Two-Step Process in Separate Vessels Using Different Catalytic Conditions	417
5.2.2.2	One-Pot Reaction with Two Catalysts and Using Different Reaction Conditions	420
5.2.2.3	One-Pot Reaction with Two Different Catalysts Using the Same Reaction Conditions	421
5.2.2.4	One-Pot Reaction with a Single Catalyst Using Different Reaction Conditions	422
5.2.2.5	One-Pot Reaction with a Single Catalyst without Change of the Reaction Conditions	423
5.2.3	Conclusions	439
	References	440
5.3	Hydroformylation–Acetalization Tandem Reactions	443
5.3.1	General Aspects	443
5.3.2	Metal Catalyst and Additives	446
5.3.2.1	Cobalt	447
5.3.2.2	Rhodium	447
5.3.2.3	Platinum	448
5.3.2.4	Ruthenium	449
5.3.2.5	Palladium	449
5.3.2.6	Iridium	450
5.3.3	Application of the Hydroformylation–Acetalization Tandem Reaction in Practice	450
5.3.3.1	Acetals as Undesired Side Products and Measures against Their Formation	451
5.3.3.2	Application of Hydroformylation–Acetalization Tandem Reactions	451
5.3.4	Conclusions	461
	References	462
5.4	Hydroaminomethylation	464
5.4.1	The Reaction	464
5.4.2	History	465
5.4.3	Mechanistic Aspects of Rhodium-Catalyzed Hydroaminomethylation	466
5.4.3.1	Reactions of Rhodium Complexes with Syngas in the Presence of Amines	466
5.4.3.2	Effects of Amines on Hydroaminomethylation	468
5.4.3.3	Stereoselective Hydroaminomethylation	469
5.4.4	The Catalytic System	469

5.4.4.1	Metals and Catalyst Precursors	469
5.4.4.2	Ligands	470
5.4.4.3	Amines, Amine Derivatives, Congeners, and Acidic Additives	474
5.4.4.4	Solvents	475
5.4.4.5	Syngas, CO, and H ₂ Surrogates	477
5.4.5	Hydroaminomethylation Protocols and Products	477
5.4.5.1	Terminal Olefins	477
5.4.5.2	Internal Olefins	477
5.4.5.3	Vinyl Compounds	480
5.4.5.4	Allyl Compounds	482
5.4.6	Conclusions	490
	References	490
5.5	Hydroformylation Followed by Another C–C-Bond Formation Step	494
5.5.1	General Remarks	494
5.5.2	Hydroformylation Followed by Attack of a Carbon Nucleophile on an Intermediary Formed Formyl or Imino Group	495
5.5.2.1	Hydroformylation–Cyclization Reaction	495
5.5.2.2	Hydroformylation–Aldol/Acyloin Reaction	497
5.5.2.3	Hydroformylation–Wittig Reactions and Related Olefinations	501
5.5.2.4	Nucleophilic Attack on a Temporarily Formed Imino Group	508
5.5.3	Electrophilic Attack by Carbon Nucleophiles in the β -Position to the Newly Formed Formyl or Imino Group	515
5.5.3.1	Hydroformylation–(β -Arylation)	515
5.5.4	Hydroformylation–(Hetero-Diels–Alder) Reactions	517
5.5.5	Hydroformylation Followed by an Elimination Reaction	519
5.5.5.1	Decarboxylative Hydroformylation	519
5.5.5.2	Hydroformylation–(β -elimination) Reaction	520
5.5.5.3	Hydroformylation–Deformylation Reaction	521
5.5.6	Conclusions	522
	References	522
6	Synthesis of Special Products via Hydroformylation	525
6.1	Production of Aroma Compounds and Fragrances via Hydroformylation	525
6.1.1	General Remarks	525
6.1.2	Catalytic Systems and Substrates	528
6.1.2.1	Catalysts	528
6.1.2.2	Substrates	529
6.1.3	Hydroformylation for the Production of Flavors and Fragrances	530
6.1.3.1	Linear Aliphatic Monoolefins as Substrates	530
6.1.3.2	Cyclic Monoolefins as Substrates	536
6.1.3.3	Polyolefins as Substrates	543
6.1.3.4	Olefins with Functional Groups as Substrates	554
6.1.3.5	Aryl-Substituted Olefins	563

6.1.3.6	Vinyl Ethers	573
6.1.3.7	Allyl Ethers and Homologs	573
6.1.3.8	Direct Preparation of Alcohols by Hydroformylation	574
6.1.3.9	New Approaches	577
6.1.4	Conclusions and Perspectives	579
	References	580
6.2	Hydroformylation of Lipids	587
6.2.1	Introduction	587
6.2.2	Actual and Potential Substrates	589
6.2.3	Hydroformylations	591
6.2.3.1	Mechanistic Aspects	591
6.2.3.2	Applied Hydroformylations, Substrates, and Tandem Reactions	597
6.2.3.3	Hydroformylation of Related Substrates	602
6.2.4	Further Conversions of Hydroformylation Products	604
6.2.5	Conclusions and Perspectives	606
	References	606
6.3	Hydroformylation of Epoxides	609
6.3.1	General Remarks	609
6.3.2	Some Applications	612
6.3.3	Conclusions	615
	References	615
6.4	Syngas-Based Routes to Glycol Aldehyde and Ethylene Glycol	617
6.4.1	General Remarks	617
6.4.2	Direct Manufacture of Ethylene Glycol from Syngas	618
6.4.3	Hydroformylation of Formaldehyde	620
6.4.4	Conclusion	625
	References	625
7	Hydroformylation in Nonconventional Reaction Media	627
7.1	General Remarks	627
7.2	Methodologies	628
7.2.1	Homogeneous Catalysts Linked to Insoluble Organic Supports	628
7.2.2	Homogeneous Catalysts on Soluble Organic Supports	629
7.2.3	Water as Solvent	631
7.2.3.1	Aqueous Two-Phase Hydroformylations	631
7.2.3.2	Supported Aqueous-Phase Catalysis (SAPC)	634
7.2.3.3	A Posteriori Separation of Products and Catalysts	634
7.2.3.4	Chemical Reactions between Catalysts and Water	635
7.2.3.5	Some Applications in Organic Synthesis	636
7.2.4	Fluorous Biphasic Systems (FBS)	639
7.2.4.1	Solvents, Ligands, and Reactions	639
7.2.4.2	Degradation Reactions	641
7.2.4.3	Conclusion	641
7.2.5	Reaction in Supercritical Fluids on the Example of Carbon Dioxide (scCO ₂)	642

7.2.5.1	General Remarks	642
7.2.5.2	Metals, Ligands, and Catalytic Systems	643
7.2.5.3	Selected Application in Organic Synthesis	646
7.2.5.4	Conclusions and Perspectives	647
7.2.6	Ionic Liquids (ILs)	648
7.2.6.1	General Remarks	648
7.2.6.2	Ionic Liquids, Ligands, and Metals	648
7.2.6.3	Decomposition of Ligands	651
7.2.6.4	Supported Ionic Liquid Phase (SILP) Hydroformylation	652
7.2.6.5	Solid-Supported Ionic Liquid Phase Hydroformylation	652
7.2.6.6	Supercritical Fluid–Ionic Liquid Biphasic System (SCF–SILP)	653
7.2.7	Temperature-Dependent or Thermomorphic Solvent Systems (TMS)	654
7.3	Comparison of Some Methods	656
	References	659
8	Decarbonylation and Dehydrocarbonylation of Aldehydes	665
8.1	General Remarks	665
8.1.1	Decarbonylation	665
8.1.1.1	Historical and Mechanistic Aspects	665
8.1.1.2	Some Synthetic Applications	669
8.2	Dehydrocarbonylation	671
8.3	Conclusions	674
	References	675
9	Selected Aspects of Production Processes	677
9.1	General Remarks	677
9.2	The Johnson Matthey Oxo Alcohols Process™	678
9.2.1	Hydroformylation	678
9.2.2	Separating the Rhodium	679
9.2.3	Conversion to INA and Processing	680
9.2.4	Conclusions	680
9.3	ExxonMobil Process for the Production of Highly Branched, Long-Chain Alcohols	680
9.3.1	Hydroformylation	681
9.3.2	Catalyst Recycling	682
9.3.3	Conclusions and Outlook	683
9.4	Process Design for Hydroformylating Octenes at the University of Kansas	684
9.4.1	CXL Process	684
9.4.2	Conclusion	687
9.5	Comments on Heterogenization of Hydroformylation	687
9.5.1	Approach to Heterogenize Hydroformylation from the Dalian Institute of Chemical Physics	688
9.5.1.1	Porous Organic Ligands (POLs)	688

9.5.1.2	Rh/POLs Catalyst Systems and Hydroformylation	689
9.5.1.3	Hydroformylation Process Using POL-Based Heterogeneous Catalyst Systems	689
9.5.1.4	Conclusion	690
9.6	Outlook	690
	References	691
