

CONTENTS

1	GENERAL INTRODUCTION	1
2	INTRODUCTION TO SMOOTHED PARTICLE HYDRODYNAMICS	7
2.1	Assets of Meshfree Methods	7
2.1.1	Smoothed Particle Hydrodynamics Method	8
2.2	Governing SPH Equations	13
2.2.1	Continuity Equation	14
2.2.2	Momentum Equation: Approximating the Navier-Stokes Equations	14
2.2.3	Equation of State: Relaxing the Incompressibility Criterion	17
2.2.4	Integrating the Equations in Time	19
2.2.5	Saint-Venant Equations	20
2.3	Defining Boundary Conditions	22
3	ESTABLISHING SPH AS MODELLING ROUTINE IN URBAN WATER MANAGEMENT	26
3.1	In- and Outflow Boundaries	27
3.2	High Computational Demand	31
3.2.1	Case Study: Extension to 3D	33
3.3	Effects of Wall Roughness	34
3.3.1	Significance of Turbulence Modelling	37
4	CHANNEL FLOW SIMULATIONS	40
4.1	Paper I: On the Reynolds Number Sensitivity of SPH	41
4.1.1	Convergence of Velocity Profiles	55
4.1.2	Multiphase Weir Overflow	57

4.2	Implications for Practical Problems	58
4.3	Paper II: Simulating Kinematic Waves with SPH	60
5	MULTIPHASE FLOWS: INCLUSION OF AIR AND SOLIDS	75
5.1	Bubble Column Experiment	76
5.1.1	Experimental Setup	77
5.1.2	Bubble Characteristics	78
5.1.3	Interfacial Oxygen Transfer	79
5.1.4	Aeration of Activated Sludge	80
5.2	Paper III: Simulating Rising Bubble Problems with SPH	82
5.3	Paper IV: Modelling Aerated Flows with SPH	88
5.3.1	Multiphase Flows in Wastewater Treatment	101
5.4	Sedimentation and Transport Processes	101
6	SPH IN WASTEWATER TREATMENT	104
6.1	Introduction to CFD in Wastewater Treatment	104
6.1.1	Summary of Activated Sludge Models	104
6.1.2	Hydraulic Model: Progress from Tanks Connected in Series to Mesh-Based CFD Methods	106
6.2	SPH as Hydraulic Model: From High to Low Resolution	108
6.3	Global Coupling between SPH and ASM1	109
6.3.1	Paper V: Wastewater Treatment Modelling with SPH	110
6.4	Effects of the Hydraulic Mixing on the Evolution of the Biokinetics	117

6.4.1	Paper VI: A Spatially Resolved Biokinetic Wastewater Treatment Model based on Smoothed Particle Hydrodynamics	117
7	HIGH PERFORMANCE COMPUTING WITH SPH	137
7.1	Paper VII: gpuSPHASE – A Shared Memory Caching Implementation for 2D SPH using CUDA	139
8	CONCLUSIONS AND FUTURE WORK	168
9	ATTACHED PUBLICATIONS	172
9.1	Paper III: Simulating Rising Bubble Problems with SPH	172
9.2	Paper VIII: Activated Sludge Modelling with SPH	172
9.3	Paper IX: SPH - partikelbasierte Strömungsberechnung zur Anwendung in der Siedlungswasserwirtschaft	172
	BIBLIOGRAPHY	192
