

Contents

1	Introduction	1
1.1	Outline	3
2	Application Scenario and Requirements	5
2.1	Overview on the Application Scenario	5
2.2	Requirement Analysis	8
2.3	Evaluation Methodology	9
2.3.1	Evaluation Criteria	9
2.3.2	Parametrization of the MAC and PHY Evaluation .	12
2.3.3	Evaluation Scenario	13
3	Fundamentals and Basic Concepts	15
3.1	State-of-the-Art Wireless Transmission Systems for Industrial Automation	15
3.1.1	IEEE 802.15.4-based Systems	16
3.1.2	IEEE 802.15.1-based Systems	16
3.1.3	Additional Proprietary Systems	17
3.2	Characterization of the UWB Transmission Channel in Industrial Environments	17
3.2.1	Channel Models	18
3.2.2	Channel Measurements	21
3.3	Ultra-Wideband Systems	30
3.3.1	UWB Definition	30
3.3.2	Regulation Requirements	31
3.3.3	UWB Signaling Techniques	31
3.3.4	IEEE 802.15.4 IR-UWB System	34
3.3.5	Basic Receiver Concepts	43
3.4	Media Access Procedures	55
3.4.1	Random Access	55
3.4.2	Polling	57
3.4.3	Reservation	58
3.4.4	Hybrid Access	58
3.4.5	MAC for UWB	59
3.4.6	Conclusion	60

4	System Enhancements and Optimizations of the IEEE 802.15.4 IR-UWB Physical Layer	61
4.1	Related Work	62
4.2	System Verification	64
4.3	Evaluation of the Standard-compliant PHY in Case of the AWGN Channel	66
4.3.1	Sliding Correlation Receiver	69
4.3.2	Soft-Decision Correlation Receiver	69
4.4	Synchronization Procedures	71
4.4.1	2-Stage Synchronization Procedure	71
4.4.2	Preselection of the Synchronization Window based on CAMDF	73
4.4.3	Synchronization Based on a Clean Template	80
4.5	Conclusion and Outlook	85
5	Enhanced Frequency Hopping Transceiver at the 5.8 GHz Band	89
5.1	Regulation Requirements	89
5.2	System Architecture	90
5.3	eFHSS Algorithm	91
5.4	Evaluation of the Proposed FHSS System at 5.8 GHz	93
5.4.1	Theoretical Analysis of the Performance	94
5.4.2	Evaluation Results	95
5.4.3	Comparison with the IEEE 802.15.4 IR-UWB PHY	98
5.5	Conclusion and Outlook	100
6	Real-time Capable Media Access	103
6.1	Related Work	103
6.2	Temporal Analysis of the IEEE 802.15.4 Standard	105
6.2.1	IEEE 802.15.4 IR-UWB PHY	105
6.2.2	IEEE 802.15.4e LLDN MAC	108
6.3	Aggregated Low Latency MAC	111
6.3.1	Adjustment of the Operating Point in the Evaluation	112
6.4	Conception of the Registration	113
6.4.1	Evaluation	116
6.5	Conception of the Standard Operation	119
6.5.1	Partial Aggregation	122
6.5.2	Retransmission Mechanism	124
6.5.3	Evaluation	125
6.6	Conception of the Emergency Stop Mechanism	132
6.6.1	Evaluation	133
6.7	Conclusion and Outlook	136
7	Conclusion and Outlook	139

A Annex	143
A.1 MATLAB Simulation Environment	143
A.1.1 Integration of the IEEE 802.15.4a Channel Model in the Simulation Environment	145
List of Abbreviations	149
List of Operators, Functions and Symbols	155
Bibliography	167
Author's Publications	183
Author's Supervised and Relevant Theses	185
Curriculum Vitae	187
