1	Introduction	9
2	Parallel fast Fourier transforms	17
2.1	Definitions	20
2.2	One-dimensional fast Fourier transforms	21
2.2.1	Pruned fast Fourier transform	21
2.2.2	Fast Fourier transform with shifted index sets	22
2.2.3	Pruned fast Fourier transform with shifted index sets	23
2.3	Multidimensional fast Fourier transform	24
2.4	Basic modules for multidimensional array transformation	27
2.4.1	The serial FFT module	28
2.4.2	The local transposition module	29
2.4.3	Combination of serial FFT and local transposition	29
2.4.4	Parallel block decomposition	30
2.4.5	Folding multidimensional arrays in row-major order	31
2.4.6	Parallel matrix transposition	32
2.4.7	The parallel multidimensional transposition module	34
2.5	Parallel FFT with multidimensional data decomposition	35
2.6	Parallel pruned FFT	40
2.7	Parallel FFT with shifted index sets	42
2.8	The ghost cell communication modules	44
2.9	The PFFT software library	46
2.10	Numerical results	48
2.10.1	Description of the parallel computing architectures	48
2.10.2	Strong scaling behavior of PFFT on JUGENE	48
2.10.3	Comparison of PFFT and FFTW on JUROPA	49
2.10.4	Parallel pruned FFT on JUGENE	49
2.10.5	Weak scaling behavior of PFFT on JUQUEEN and JUROPA	50
2.10.6	Strong scaling behavior of PFFT on JUQUEEN and JUROPA	51
3	Parallel nonequispaced fast Fourier transforms	55
3.1	Definitions	56
3.2	The three-dimensional NFFT algorithm	57
3.2.1	Window functions	64

3.2.2	Shifted NFFT	67
3.2.3	Interlaced NFFT	68
3.2.4	Optimized deconvolution	69
3.3	The parallel three-dimensional NFFT	74
3.3.1	Parallel data decomposition	74
3.3.2	Description of the algorithm	74
3.4	The parallel three-dimensional NDFT	81
3.5	The PNFFT software library	81
3.6	Numerical results	83
3.6.1	Strong scaling of pruned PNFFT on JUGENE	84
4	Parallel particle-mesh methods based on NFFT	89
4.1	Definitions	90
4.2	The Ewald splitting	92
4.3	The short-range and self interaction modules	94
4.4	The long-range interaction module	96
4.4.1	The common approximation framework and fast algorithm	96
4.4.2	Periodicity in three dimensions	97
4.4.3	Periodicity in two dimensions	99
4.4.4	Periodicity in one dimension	101
4.4.5	Periodicity in no dimension	102
4.4.6	Two-point Taylor interpolation using Newton basis polynomials	103
4.4.7	Some notes on Fourier approximations of non-periodic functions	105
4.5	The P ² NFFT framework	109
4.6	The relation of P ² NFFT and P ³ M	109
4.6.1	Interlaced P ² NFFT and P ³ M	113
4.7	The relation of P ² NFFT to other particle-mesh methods	116
4.7.1	Fast summation with non-periodic boundary conditions	117
4.7.2	Ewald summation	118
4.7.3	Fast Ewald summation based on NFFT	119
4.7.4	Particle-mesh Ewald	119
4.7.5	Smooth particle-mesh Ewald	119
4.7.6	Gaussian split Ewald	120
4.7.7	Spectrally accurate Ewald	120
4.8	Complexity of Ewald summation and parameter selection	120
4.8.1	Runtime model	123
4.8.2	Potential computation via Ewald summation	124
4.8.3	Potential computation via P ² NFFT	124
4.8.4	Field computation via Ewald summation	125
4.8.5	Field computation via P ² NFFT	127
4.8.6	Selection of P ² NFFT parameters	127
4.9	Parallel P ² NFFT	130

4.10 The parallel P ² NFFT software library	134
4.11 Numerical results	135
4.11.1 Description of test systems	135
4.11.2 Parameter selection and accuracy of 3d-periodic P ² NFFT . . .	136
4.11.3 Parameter selection and accuracy for mixed periodicity . . .	137
4.11.4 Strong scaling of 0d-periodic P ² NFFT on JUGENE	138
4.11.5 Comparison of P ² NFFT to other fast Coulomb solvers	141
List of publications	147
