

Contents

Chapter 1. Introduction	5
1.1. Typical Approach for Designing Hardware	6
1.2. Terminology	7
1.3. Contribution and Contribution Boundaries	7
1.4. Previous Publications	8
1.5. Outline	9
Chapter 2. Overview of Techniques for Design Understanding	11
2.1. Increasing the level of abstraction	11
2.2. Specification Mining	14
2.3. Code annotations	15
2.4. Code generation	17
2.5. Summary	19
Chapter 3. Coverage Based Feature Localization	21
3.1. Related Work	21
3.2. Preliminaries	22
3.3. Approach	23
3.4. Evaluation	28
3.5. Summary	34
Chapter 4. Trace Based Feature Localization	35
4.1. Related Work	35
4.2. Preliminaries	36
4.3. Approach	39
4.4. Evaluation	41
4.5. Summary	45
Chapter 5. Orthogonal Feature Aware Feature Localization	47
5.1. Preliminaries	47
5.2. Approach	47
5.3. Evaluation	49
5.4. Summary	51
Chapter 6. Automatic Use Case Generation	53
6.1. Related Work	53
6.2. Preliminaries	54
6.3. Approach	54
6.4. Evaluation	60
6.5. Summary	64
Chapter 7. Mutation Based Feature Localization	65
7.1. Related Work	65
7.2. Preliminaries	65
7.3. Approach	66

7.4. Evaluation	70
7.5. Summary	74
Chapter 8. Light-weight Approach for Automatically Connecting Hardware Modules	77
8.1. Related Work	77
8.2. Approach	78
8.3. Evaluation	81
8.4. Summary	86
Chapter 9. Trace Based Debugging	89
9.1. Related Work	89
9.2. Preliminaries	91
9.3. Approach	91
9.4. Evaluation	94
9.5. Summary	100
Chapter 10. Future Work	101
10.1. Feature Localization	101
10.2. Debugging	102
10.3. Automatic Connection Approach	102
Chapter 11. Conclusion	105
Appendix A. Feature description	109
Appendix B. Additional Results of the Connecting Approach	115
Bibliography	119
Abbreviations	123
