Acknowledgement — VII

1 Introduction — 1

- 1.1 New materials — 1
- 1.2 Materials and process design — 4
- 1.3 Challenges — 6
- 1.4 Goals — 8
- 1.5 Questions — 10
- 1.6 Strategy and procedure — 10
- 1.7 Thermophysical properties — 12

2 Experimental methods — 14

- 2.1 Conventional techniques — 14
- 2.2 Levitation techniques — 15
- 2.3 Optical dilatometry — 23
- 2.4 Oscillating drop method — 27
- 2.5 Oscillating cup viscometry — 34

3 Density — 38

- 3.1 Formalism — 38
- 3.2 Unary systems — 42
- 3.3 Binary systems — 55
- 3.4 Ternary systems — 60
- 3.5 Observed trends — 63
- 3.6 Explanation attempts — 66
- 3.7 Summary and conclusions — 68

4 Surface tension — 70

- 4.1 Formalism and models — 70
- 4.2 Unary systems — 84
- 4.3 Binary systems — 97
- 4.4 Ternary systems — 107
- 4.5 Observed trends — 113
- 4.6 Summary and conclusions — 116

5 Viscosity — 118

- 5.1 Formalism and models — 118
- 5.2 Unary systems — 123
- 5.3 Binary and ternary systems — 134

5.4	Ideal solution and excess viscosity —	142
5.5	Observed trends —	143
5.6	Summary and conclusions —	145
6	Inter-property relations —	147
6.1	Surface tension - viscosity relation —	147
6.2	Stokes-Einstein relation —	152
6.3	Summary and conclusions —	161
7	Application examples —	163
7.1	Solid-liquid interfacial energy —	163
7.2	Liquid-liquid interfacial energy —	168
7.3	Shape memory alloys —	172
8	Conclusions —	184
8.1	Discussion —	184
8.2	Answers —	187
8.3	Implications on computer aided materials design from the melt —	189
8.4	Outlook —	189
A	Data —	191
A.1	Pure elements —	193
A.2	Ag-Al-Cu —	195
A.3	Ag-Au —	199
A.4	Al-Au —	200
A.5	Al-Cu-Si —	201
A.6	Al-Fe —	204
A.7	Al-Ni —	205
A.8	Au-Cu —	206
A.9	Co-Sn —	206
A.10	Co-Cu-Fe —	207
A.11	Cu-Co-Ni —	210
A.12	Cu-Fe-Ni —	212
A.13	Cu-Ti —	216
A.14	Cr-Fe-Ni —	217
B	Redlich-Kister parameters —	220
B.1	Ag-Al-Cu —	222
B.2	Al-Au —	223
B.3	Al-Cu-Si —	224
B.4	Al-Fe —	225
B.5	Al-In —	225

B.6	Al-Ni —	226
B.7	Co-Sn —	226
B.8	Cu-Co-Fe —	227
B.9	Cu-Co-Ni —	228
B.10	Cu-Fe-Ni —	230
B.11	Cu-Ti —	231
B.12	Cr-Fe-Ni —	233

Bibliography — 235
