## Preface — V

<b>1</b>	<b>Emulsions: Formation, stability, industrial applications — 1</b>
1.1	General introduction — 1
1.2	Nature of the Emulsifier — 1
1.3	Structure of the system — 2
1.4	Breakdown processes in emulsions — 3
1.5	Creaming and sedimentation — 4
1.6	Flocculation — 4
1.7	Ostwald ripening (disproportionation) — 4
1.8	Coalescence — 5
1.9	Phase inversion — 5
1.10	Industrial applications of emulsions — 5
1.11	Book outline — 6
<b>2</b>	<b>Thermodynamics of emulsion formation and breakdown — 9</b>
2.1	The interface (Gibbs dividing line) — 9
2.2	Thermodynamics of emulsion formation and breakdown — 11
<b>3</b>	<b>Interaction forces between emulsion droplets — 15</b>
3.1	Van der Waals attraction — 15
3.2	Electrostatic repulsion — 17
3.3	Steric repulsion — 21
3.3.1	Mixing interaction $G_{\text{mix}}$ — 23
3.3.2	Elastic interaction $G_{\text{el}}$ — 24
3.3.3	Total energy of interaction — 25
3.3.4	Criteria for effective steric stabilization — 26
<b>4</b>	<b>Adsorption of surfactants at the oil/water interface — 29</b>
4.1	Introduction — 29
4.2	The Gibbs adsorption isotherm — 29
4.3	Equation of state approach — 32
4.4	The Langmuir, Szyszkowski and Frumkin equations — 34
4.5	Effectiveness of surfactant adsorption at the liquid/liquid interface — 35
4.6	Efficiency of adsorption of surfactant at the liquid/liquid interface — 35
4.7	Adsorption from mixtures of two surfactants — 37
4.8	Adsorption of macromolecules — 38

4.9	Interfacial tension measurements —	40
4.9.1	The Wilhelmy plate method —	40
4.9.2	The pendent drop method —	41
4.9.3	Sessile drop method —	42
4.9.4	The Du Nouy ring method —	43
4.9.5	The drop volume (weight) method —	43
4.9.6	The spinning drop method —	44
<b>5</b>	<b>Mechanism of emulsification and the role of the emulsifier —</b>	<b>47</b>
5.1	Introduction —	47
5.2	Mechanism of emulsification —	47
5.3	Role of surfactants in emulsion formation —	50
5.3.1	Role of surfactants in reduction of droplet size —	50
5.3.2	Role of surfactants in droplet deformation —	53
<b>6</b>	<b>Methods of emulsification —</b>	<b>59</b>
6.1	Introduction —	59
6.2	Rotor-stator mixers —	59
6.2.1	Toothed devices —	59
6.2.2	Batch radial discharge mixers —	60
6.2.3	Design and arrangement —	61
6.3	Flow regimes —	63
6.3.1	Laminar flow —	64
6.3.2	Turbulent flow —	66
6.4	Membrane emulsification —	69
6.5	Formulation variables and comparison of various emulsification methods —	70
<b>7</b>	<b>Selection of emulsifiers —</b>	<b>73</b>
7.1	Introduction —	73
7.2	The hydrophilic-lipophile balance (HLB) concept —	76
7.3	The phase inversion temperature (PIT) concept —	82
7.4	The cohesive energy ratio (CER) concept —	85
7.5	The critical packing parameter (CPP) for emulsion selection —	86
7.6	Stabilisation by solid particles (Pickering emulsions) —	89
<b>8</b>	<b>Creaming/sedimentation of emulsions and its prevention —</b>	<b>95</b>
8.1	Introduction —	95
8.2	Creaming or sedimentation rates —	96
8.2.1	Very dilute emulsions ( $\phi < 0.01$ ) —	96
8.2.2	Moderately concentrated emulsions ( $0.2 > \phi > 0.1$ ) —	97
8.2.3	Concentrated emulsions ( $\phi > 0.2$ ) —	98

8.3	Properties of a creamed layer — 98
8.4	Prevention of creaming or sedimentation — 99
8.4.1	Matching density of oil and aqueous phases — 99
8.4.2	Reduction of droplet size — 99
8.4.3	Use of “thickeners” — 100
8.4.4	Reduction of creaming/sedimentation of emulsions using associative thickeners — 103
8.4.5	Controlled flocculation — 106
8.4.6	Depletion flocculation — 107
8.4.7	Use of “inert” fine particles — 109
8.4.8	Use of mixtures of polymers and finely divided particulate solids — 110
8.4.9	Use of liquid crystalline phases — 111
<b>9</b>	<b>Flocculation of emulsions — 113</b>
9.1	Introduction — 113
9.2	Mechanism of emulsion flocculation — 113
9.2.1	Flocculation of electrostatically stabilised emulsions — 114
9.2.2	Flocculation of sterically stabilised emulsions — 118
9.2.3	Weak flocculation of sterically stabilised emulsions — 122
9.2.4	Depletion flocculation — 123
9.2.5	Bridging flocculation by polymers and polyelectrolytes — 124
9.3	General rules for reducing (eliminating) flocculation — 127
9.3.1	Charge stabilised emulsions, e.g. using ionic surfactants — 127
9.3.2	Sterically stabilised emulsions — 127
<b>10</b>	<b>Ostwald ripening in emulsions and its prevention — 129</b>
10.1	Driving force for Ostwald ripening — 129
10.2	Kinetics of Ostwald ripening — 130
10.3	Reduction of Ostwald ripening — 134
10.3.1	Addition of a small proportion of highly insoluble oil — 134
10.3.2	Modification of the interfacial layer for reduction of Ostwald ripening — 136
10.4	Influence of initial droplet size of emulsions on the Ostwald ripening rate — 137
<b>11</b>	<b>Emulsion coalescence and its prevention — 141</b>
11.1	Introduction — 141
11.2	Forces across liquid films — 141
11.2.1	Disjoining pressure approach — 143
11.2.2	Interfacial tension of liquid films — 143
11.3	Film rupture — 144
11.4	Rate of coalescence between droplets — 146

<b>11.5</b>	<b>Reduction of coalescence — 151</b>
<b>11.5.1</b>	<b>Use of mixed surfactant films — 151</b>
<b>12</b>	<b>Phase inversion and its prevention — 161</b>
<b>12.1</b>	<b>Introduction — 161</b>
<b>12.2</b>	<b>Catastrophic inversion — 161</b>
<b>12.3</b>	<b>Transitional inversion — 163</b>
<b>12.4</b>	<b>The phase inversion temperature (PIT) — 165</b>
<b>13</b>	<b>Characterization of emulsions and assessment of their stability — 173</b>
<b>13.1</b>	<b>Introduction — 173</b>
<b>13.2</b>	<b>Assessment of the structure of the liquid/liquid interface — 174</b>
<b>13.2.1</b>	<b>Double layer investigation — 174</b>
<b>13.2.2</b>	<b>Measurement of surfactant and polymer adsorption — 176</b>
<b>13.3</b>	<b>Assessment of creaming/sedimentation of emulsions — 177</b>
<b>13.4</b>	<b>Assessment of flocculation, Ostwald ripening and coalescence — 180</b>
<b>13.4.1</b>	<b>Optical microscopy — 180</b>
<b>13.4.2</b>	<b>Electron microscopy — 182</b>
<b>13.4.3</b>	<b>Confocal laser scanning microscopy (CLSM) — 184</b>
<b>13.5</b>	<b>Scattering techniques — 184</b>
<b>13.5.1</b>	<b>Light-scattering techniques — 184</b>
<b>13.5.2</b>	<b>Turbidity measurements — 185</b>
<b>13.5.3</b>	<b>Light diffraction techniques — 186</b>
<b>13.5.4</b>	<b>Dynamic light scattering – photon correlation spectroscopy (PCS) — 188</b>
<b>13.5.5</b>	<b>Back-scattering techniques — 191</b>
<b>13.6</b>	<b>Measurement of the rate of creaming or sedimentation — 191</b>
<b>13.7</b>	<b>Measurement of rate of flocculation — 192</b>
<b>13.8</b>	<b>Measurement of incipient flocculation — 193</b>
<b>13.9</b>	<b>Measurement of Ostwald ripening — 193</b>
<b>13.10</b>	<b>Measurement of the rate of coalescence — 194</b>
<b>13.11</b>	<b>Bulk properties of emulsions. Equilibrium cream or sediment volume (or height) — 194</b>
<b>14</b>	<b>Industrial applications of emulsions — 197</b>
<b>14.1</b>	<b>Introduction — 197</b>
<b>14.2</b>	<b>Food emulsions — 197</b>
<b>14.2.1</b>	<b>Food grade surfactants — 198</b>
<b>14.2.2</b>	<b>Surfactant association structures, micro-emulsions and emulsions in food — 207</b>
<b>14.3</b>	<b>Emulsions in cosmetics and personal care formulations — 209</b>
<b>14.4</b>	<b>Emulsions in pharmacy — 217</b>

- 14.5      Emulsions in agrochemicals — **219**
- 14.6      Rolling oil and lubricant emulsions — **220**

**Index — 223**
