A Personal Foreword *XXIII*

Part I The Concept of Fragment-based Drug Discovery 1

1	The Role of Fragment-based Discovery in Lead Finding	3
	<i>Roderick E. Hubbard</i>	
1.1	Introduction	3
1.2	What is FBLD?	4
1.3	FBLD: Current Practice	5
1.3.1	Using Fragments: Conventional Targets	5
1.3.2	Using Fragments: Unconventional Targets	13
1.4	What do Fragments Bring to Lead Discovery?	14
1.5	How did We Get Here?	16
1.5.1	Evolution of the Early Ideas and History	16
1.5.2	What has Changed Since the First Book was Published in 2006?	16
1.6	Evolution of the Methods and Their Application Since 2005	19
1.6.1	Developments in Fragment Libraries	21
1.6.2	Fragment Hit Rate and Druggability	22
1.6.3	Developments in Fragment Screening	23
1.6.4	Ways of Evolving Fragments	23
1.6.5	Integrating Fragments Alongside Other Lead-Finding Strategies	23
1.6.6	Fragments Can be Selective	24
1.6.7	Fragment Binding Modes	25
1.6.8	Fragments, Chemical Space, and Novelty	27
1.7	Current Application and Impact	27
1.8	Future Opportunities	28
	References	29

2	Selecting the Right Targets for Fragment-Based Drug Discovery	37
	<i>Thomas G. Davies, Harren Jhoti, Puja Pathuri, and Glyn Williams</i>	
2.1	Introduction	37
2.2	Properties of Targets and Binding Sites	39
2.3	Assessing Druggability	41
2.4	Properties of Ligands and Drugs	42
2.5	Case Studies	43
2.5.1	Case Study 1: Inhibitors of Apoptosis Proteins (IAPs)	44
2.5.2	Case Study 2: HCV-NS3	46
2.5.3	Case Study 3: PKM2	47
2.5.4	Case Study 4: Soluble Adenylate Cyclase	49
2.6	Conclusions	50
	References	51
3	Enumeration of Chemical Fragment Space	57
	<i>Jean-Louis Reymond, Ricardo Visini, and Mahendra Awale</i>	
3.1	Introduction	57
3.2	The Enumeration of Chemical Space	58
3.2.1	Counting and Sampling Approaches	58
3.2.2	Enumeration of the Chemical Universe Database GDB	58
3.2.3	GDB Contents	59
3.3	Using and Understanding GDB	61
3.3.1	Drug Discovery	61
3.3.2	The MQN System	62
3.3.3	Other Fingerprints	63
3.4	Fragments from GDB	65
3.4.1	Fragment Replacement	65
3.4.2	Shape Diversity of GDB Fragments	66
3.4.3	Aromatic Fragments from GDB	68
3.5	Conclusions and Outlook	68
	Acknowledgment	69
	References	69
4	Ligand Efficiency Metrics and their Use in Fragment Optimizations	75
	<i>György G. Ferenczy and György M. Keserű</i>	
4.1	Introduction	75
4.2	Ligand Efficiency	75
4.3	Binding Thermodynamics and Efficiency Indices	78
4.4	Enthalpic Efficiency Indices	81
4.5	Lipophilic Efficiency Indices	83
4.6	Application of Efficiency Indices in Fragment-Based Drug Discovery Programs	88
4.7	Conclusions	94
	References	95

Part II Methods and Approaches for Fragment-based Drug Discovery 99

- 5 Strategies for Fragment Library Design 101**
Justin Bower, Angelo Pugliese, and Martin Drysdale
- 5.1 Introduction 101
- 5.2 Aims 102
- 5.3 Progress 102
- 5.3.1 BDDP Fragment Library Design: Maximizing Diversity 103
- 5.3.2 Assessing Three-Dimensionality 103
- 5.3.3 3DFrag Consortium 104
- 5.3.4 Commercial Fragment Space Analysis 105
- 5.3.5 BDDP Fragment Library Design 108
- 5.3.6 Fragment Complexity 111
- 5.3.6.1 Diversity-Oriented Synthesis-Derived Fragment-Like Molecules 113
- 5.4 Future Plans 114
- 5.5 Summary 116
- 5.6 Key Achievements 116
- References 116
- 6 The Synthesis of Biophysical Methods In Support of Robust Fragment-Based Lead Discovery 119**
Ben J. Davis and Anthony M. Giannetti
- 6.1 Introduction 119
- 6.2 Fragment-Based Lead Discovery on a Difficult Kinase 121
- 6.3 Application of Orthogonal Biophysical Methods to Identify and Overcome an Unusual Ligand: Protein Interaction 127
- 6.4 Direct Comparison of Orthogonal Screening Methods Against a Well-Characterized Protein System 131
- 6.5 Conclusions 135
- References 136
- 7 Differential Scanning Fluorimetry as Part of a Biophysical Screening Cascade 139**
Duncan E. Scott, Christina Spry, and Chris Abell
- 7.1 Introduction 139
- 7.2 Theory 140
- 7.2.1 Equilibria are Temperature Dependent 140
- 7.2.2 Thermodynamics of Protein Unfolding 142
- 7.2.3 Exact Mathematical Solutions to Ligand-Induced Thermal Shifts 143
- 7.2.4 Ligand Binding and Protein Unfolding Thermodynamics Contribute to the Magnitude of Thermal Shifts 145
- 7.2.5 Ligand Concentration and the Magnitude of Thermal Shifts 147
- 7.2.6 Models of Protein Unfolding Equilibria and Ligand Binding 148

7.2.7	Negative Thermal Shifts and General Confusions	150
7.2.8	Lessons Learnt from Theoretical Analysis of DSF	151
7.3	Practical Considerations for Applying DSF in Fragment-Based Approaches	152
7.4	Application of DSF to Fragment-Based Drug Discovery	154
7.4.1	DSF as a Primary Enrichment Technique	154
7.4.2	DSF Compared with Other Hit Identification Techniques	159
7.4.3	Pursuing Destabilizing Fragment Hits	166
7.4.4	Lessons Learnt from Literature Examples of DSF in Fragment-Based Drug Discovery	168
7.5	Concluding Remarks	169
	Acknowledgments	169
	References	170
8	Emerging Technologies for Fragment Screening	173
	<i>Sten Ohlson and Minh-Dao Duong-Thi</i>	
8.1	Introduction	173
8.2	Emerging Technologies	175
8.2.1	Weak Affinity Chromatography	175
8.2.1.1	Introduction	175
8.2.1.2	Theory	177
8.2.1.3	Fragment Screening	179
8.2.2	Mass Spectrometry	185
8.2.2.1	Introduction	185
8.2.2.2	Theory	186
8.2.2.3	Applications	186
8.2.3	Microscale Thermophoresis	187
8.2.3.1	Introduction	187
8.2.3.2	Theory	189
8.2.3.3	Applications	189
8.3	Conclusions	189
	Acknowledgments	191

9	Computational Methods to Support Fragment-based Drug Discovery	197
	<i>Laurie E. Grove, Sandor Vajda, and Dima Kozakov</i>	
9.1	Computational Aspects of FBDD	197
9.2	Detection of Ligand Binding Sites and Binding Hot Spots	198
9.2.1	Geometry-based Methods	199
9.2.2	Energy-based Methods	201
9.2.3	Evolutionary and Structure-based Methods	202
9.2.4	Combination Methods	202
9.3	Assessment of Druggability	203
9.4	Generation of Fragment Libraries	205

9.4.1	Known Drugs	206
9.4.2	Natural Compounds	207
9.4.3	Novel Scaffolds	208
9.5	Docking Fragments and Scoring	209
9.5.1	Challenges of Fragment Docking	209
9.5.2	Examples of Fragment Docking	210
9.6	Expansion of Fragments	212
9.7	Outlook	214
	References	214
10	Making FBDD Work in Academia	223
	<i>Stacie L. Bulfer, Frantz Jean-Francois, and Michelle R. Arkin</i>	
10.1	Introduction	223
10.2	How Academic and Industry Drug Discovery Efforts Differ	225
10.3	The Making of a Good Academic FBDD Project	226
10.4	FBDD Techniques Currently Used in Academia	228
10.4.1	Nuclear Magnetic Resonance	229
10.4.2	X-Ray Crystallography	230
10.4.3	Surface Plasmon Resonance/Biolayer Interferometry	231
10.4.4	Differential Scanning Fluorimetry	232
10.4.5	Isothermal Titration Calorimetry	232
10.4.6	Virtual Screening	232
10.4.7	Mass Spectrometry	233
10.4.7.1	Native MS	233
10.4.7.2	Site-Directed Disulfide Trapping (Tethering)	234
10.4.8	High-Concentration Bioassays	234
10.5	Project Structures for Doing FBDD in Academia	235
10.5.1	Targeting p97: A Chemical Biology Consortium Project	235
10.5.2	Targeting Caspase-6: An Academic–Industry Partnership	236
10.6	Conclusions and Perspectives	239
	References	240
11	Site-Directed Fragment Discovery for Allostery	247
	<i>T. Justin Rettenmaier, Sean A. Hudson, and James A. Wells</i>	
11.1	Introduction	247
11.2	Caspases	249
11.2.1	Tethered Allosteric Inhibitors of Executioner Caspases-3 and -7	249
11.2.2	Tethering Inflammatory Caspase-1	250
11.2.3	Tethered Allosteric Inhibitors of Caspase-5	251
