Volume 1

List of Contributors XV

Preface XXV

Part I Drop-in Bio-Based Chemicals 1

- 1 **Olefins from Biomass 3**
Alessandro Chierigato, Juliana Velasquez Ochoa, and Fabrizio Cavani
- 2 **Aromatics from Biomasses: Technological Options for Chemocatalytic Transformations 33**
Fabrizio Cavani, Stefania Albonetti, and Francesco Basile
- 3 **Isostearic Acid: A Unique Fatty Acid with Great Potential 51**
Sophie C.C. Wiedemann, Pieter C.A. Bruijninx, and Bert M. Weckhuysen
- 4 **Biosyngas and Derived Products from Gasification and Aqueous Phase Reforming 79**
Francesco Basile, Stefania Albonetti, Fabrizio Cavani, Erica Lombardi, and Rodolfo Mafessanti
- 5 **The Hydrogenation of Vegetable Oil to Jet and Diesel Fuels in a Complex Refining Scenario 111**
Giuseppe Bellussi, Vincenzo Calemma, Paolo Pollesel, and Giacomo Rispoli

Part II Bio-Monomers 151

- 6 **Synthesis of Adipic Acid Starting from Renewable Raw Materials 153**
Thomas R. Boussie, Gary M. Diamond, Eric Dias, and Vince Murphy

7	Industrial Production of Succinic Acid 173
	<i>Alfred Carlson, Bill Coggio, Kit Lau, Christopher Mercogliano, and Jim Millis</i>
8	2,5-Furandicarboxylic Acid Synthesis and Use 191
	<i>Ying-Ting Huang, Jinn-Jong Wong, Cheng-Jyun Huang, Chia-Ling Li, and Guang-Way Bill Jang</i>
9	Production of Bioacrylic Acid 217
	<i>Benjamin Katryniok, Thomas Bonnotte, Franck Dumeignil, and Sébastien Paul</i>
10	Production of Ethylene and Propylene Glycol from Lignocellulose 245
	<i>Anna Katharina Beine, Peter J.C. Hausoul, and Regina Palkovits</i>
	Part III Polymers from Bio-Based building blocks 271
11	Introduction 273
	<i>Alessandro Gandini</i>
12	Polymers from Pristine and Modified Natural Monomers 275
	<i>Annamaria Celli, Alessandro Gandini, Claudio Gioia, Talita M. Lacerda, Micaela Vannini, and Martino Colonna</i>
13	Polymers from Monomers Derived from Biomass 315
	<i>Annamaria Celli, Martino Colonna, Alessandro Gandini, Claudio Gioia, Talita M. Lacerda, and Micaela Vannini</i>
	Volume 2
	List of Contributors XV
	Preface XXV
	Part IV Reactions Applied to Biomass Valorization 351
14	Beyond H₂: Exploiting H-Transfer Reaction as a Tool for the Catalytic Reduction of Biomass 353
	<i>Alice Lolli, Yu Zhang, Francesco Basile, Fabrizio Cavani, and Stefania Albonetti</i>
14.1	Introduction 353
14.2	MPV Reaction Using Homogeneous Catalysts 354
14.3	MPV Reaction Using Heterogeneous Catalysts 357
14.3.1	Mechanism and Path on Heterogeneous Catalysts 359
14.4	H-Transfer Reaction on Molecules Derived from Biomass 361
14.4.1	Levulinic Acid Hydrogenation 361

14.4.2	Furan Derivative Hydrogenation	365
14.4.3	Lignin and Sugar Hydrogenation	370
14.4.4	Glycerol Dehydration/Hydrogenation	371
14.5	Industrial Applications of the MPV Reaction	372
14.6	Conclusions	374
	Acknowledgments	374
	References	375
 15	Selective Oxidation of Biomass Constitutive Polymers to Valuable Platform Molecules and Chemicals	379
	<i>Mihaela Florea and Vasile I. Parvulescu</i>	
15.1	Introduction	379
15.2	Selective Oxidation of Cellulose	380
15.2.1	Platform Molecules Obtained via Selective Oxidation of Cellulose	381
15.2.1.1	Formic Acid	381
15.2.1.2	Gluconic and Glycolic Acids	383
15.2.1.3	LA	384
15.2.1.4	Succinic Acid	385
15.2.1.5	Acetic Acid	386
15.3	Selective Oxidation of Lignin	387
15.3.1	Selective Oxidation of Lignin in the Presence of Homogenous Catalysts	387
15.3.2	Selective Oxidation of Lignin in the Presence of Heterogeneous Catalysts	392
15.4	Selective Oxidation of Starch	394
15.5	Conclusions	398
	References	398
 16	Deoxygenation of Liquid and Liquefied Biomass	403
	<i>Thuan Minh Huynh, Udo Armbruster, and Andreas Martin</i>	
16.1	Introduction	403
16.2	General Remarks on Deoxygenation	406
16.3	Deoxygenation of Model Compounds	407
16.3.1	Phenol and Alkylphenols	407
16.3.2	Guaiacol and Substituted Guaiacols	409
16.3.3	Lignin-Derived Molecules	410
16.3.4	Short-Chain Carboxylic Acids	410
16.3.5	Furans, Furfurals, and Benzofurans	412
16.4	Deoxygenation of Liquid and Liquefied Biomass	412
16.4.1	Triglycerides	412
16.4.2	Bio-Oils from Hydrothermal Liquefaction or Fast Pyrolysis	413
16.4.3	Black Liquor	416
16.5	Deoxygenation in Absence of Hydrogen	417
16.5.1	Pyrolysis Oils	417

16.5.2	Triglycerides	418
16.5.3	Long-Chain Carboxylic Acids	419
16.5.4	Biomass and Liquefied Biomass Deoxygenation by Hydrothermal Processes	419
16.5.4.1	APR	420
16.5.4.2	Hydrothermal Upgrading	422
16.5.4.3	Supercritical Water Processing	423
16.6	Conclusions and Outlook	423
	References	425
17	C–C Coupling for Biomass-Derived Furanics Upgrading to Chemicals and Fuels	431
	<i>Tuong V. Bui, Steven Crossley, and Daniel E. Resasco</i>	
17.1	Introduction	431
17.2	Upgrading Strategy for Furanics	433
17.2.1	Aldol Condensation of Furfural–HMF	433
17.2.1.1	Mechanism of Aldol Condensation Reaction	433
17.2.1.2	Catalysts for Aldol Condensation	436
17.2.1.3	Upgrading Strategy	439
17.2.2	Hydroxyalkylation–Alkylation: Sylvan Process	444
17.2.2.1	Mechanism of Hydroxyalkylation–Alkylation (HAA)	445
17.2.2.2	Catalysts for Hydroxyalkylation–Alkylation (HAA)	445
17.2.2.3	Upgrading Strategy	448
17.2.3	Diels–Alder	454
17.2.3.1	Mechanism of Diels–Alder Reaction	454
17.2.3.2	Catalysts for Diels–Alder Reaction	456
17.2.3.3	Upgrading Strategy	459
17.2.4	Piancatelli Reaction–Ring Rearrangement of Furfural	461
17.2.4.1	Mechanism of Furfural Ring Rearrangement	461
17.2.4.2	Catalysts for Ring Rearrangement of Furfural	463
17.2.4.3	Upgrading Strategy	465
17.2.5	Oxidation of Furanics	470
17.2.5.1	Mechanism of Furanics Oxidation	470
17.2.5.2	Catalysts for Furfural Oxidation	471
17.2.5.3	Upgrading Strategy	476
17.2.6	Dimerization of Furfural via Oxidative Coupling	478
17.3	Summary and Conclusion	479
	References	482
Part V	Biorefineries and Value Chains	495
18	A Vision for Future Biorefineries	497
	<i>Paola Lanzafame, Siglinda Perathoner, and Gabriele Centi</i>	
18.1	Introduction	497
18.2	The Concept of Biorefinery	500

18.3	The Changing Model of Biorefinery	502
18.3.1	Olefin Biorefinery	505
18.3.2	Biorefinery for Flexible Production of Chemicals and Fuels	508
18.4	Integrate CO ₂ Use and Solar Energy within Biorefineries	512
18.5	Conclusions	514
	Acknowledgments	515
	References	515
19	Oleochemical Biorefinery	519
	<i>Matthias N. Schneider, Alberto Iaconi, and Susanna Larocca</i>	
19.1	Oleochemistry Overview	519
19.1.1	Introduction	519
19.1.2	Value Chain for Oleochemistry	520
19.1.2.1	Raw Materials	520
19.1.2.2	Processing	522
19.1.2.3	Oleochemical Substances	523
19.2	Applications and Markets for Selected Oleochemical Products	523
19.2.1	Applications for Products from Oleochemistry Value Chain	523
19.2.2	Fats and Oil as Raw Materials for Oleochemicals	525
19.2.3	Fatty Acid Market: History, Present, and Prognosis	526
19.2.4	Glycerine Market: History, Present, and Prognosis	527
19.3	Future Perspectives of Oleochemistry in the View of Bioeconomy	529
19.3.1	Potentials for Oleochemistry	529
19.3.2	Legal and Regulatory Background	531
19.4	Conclusions	532
	References	532
20	Arkema's Integrated Plant-Based Factories	535
	<i>Jean-Luc Dubois</i>	
20.1	Introduction	535
20.2	Arkema's Plant-Based Factories	535
20.2.1	Marseille Saint-Menet (France)	536
20.2.2	Hengshui (China)	537
20.2.3	Blooming Prairie (United States)	538
20.2.4	Feuchy (France)	539
20.2.5	Parentis (France)	539
20.3	Cross-Metathesis of Vegetable Oil Plant	540
20.3.1	From Rapeseed Oil to a Synthetic Palm Kernel or Coconut Oil	540
20.3.2	Preliminary Economic Analysis	540
20.3.3	Risk Analysis	543
20.3.4	Lessons for Research and Development Program	545
20.3.5	Lessons for Legislators	547

20.4	Summary and Conclusions	547
	Acknowledgments	548
	References	548
21	Colocation as Model for Production of Bio-Based Chemicals from Starch	549
	<i>Ruben Jolie, Jean-Claude de Troostembergh, Aristos Aristidou, Massimo Bregola, and Eric Black</i>	
21.1	Introduction	549
21.2	Wet Milling of Cereal Grains: At the Heart of the Starch Biorefinery	551
21.2.1	Wet Milling of Maize (Corn)	551
21.2.2	Wet Milling of Wheat	552
21.2.3	Downstream Processing of Starch Slurry	553
21.2.4	Cereal Grain Wet Mill Products as Raw Materials for Bio-Based Chemicals	554
21.3	The Model of Colocation	554
21.3.1	Creating Value through Economies of Scale	554
21.3.2	The Benefits Gained from Colocation at Starch Biorefineries	555
21.3.2.1	Increased Cash Flow	556
21.3.2.2	Reduced Capital Demand	557
21.3.2.3	Reduced Manufacturing Risk	557
21.4	Examples of Starch-Based Chemicals Produced in a Colocation Model	558
21.4.1	Ethanol	558
21.4.1.1	Corn Wet Mills for Biofuel Ethanol	559
21.4.1.2	Wheat Wet Mill for Premium Grain Alcohol	560
21.4.2	Lactic Acid	561
21.4.3	Citric Acid	562
21.4.4	Sugar Alcohols	563
21.4.5	2-Keto-L-gulonic Acid	564
21.4.6	1,3-Propanediol	564
21.5	Summary and Conclusions	565
	References	566
22	Technologies, Products, and Economic Viability of a Sugarcane Biorefinery in Brazil	569
	<i>Alan Barbagelata El-Assad, Everton Simões Van-Dal, Mateus Schreiner Garcez Lopes, Paulo Luiz de Andrade Coutinho, Roberto Werneck do Carmo, and Selma Barbosa Jaconis</i>	
22.1	Introduction	569
22.2	Biorefineries: Building the Basis of a New Chemical Industry	570
22.2.1	Biomasses/Residues and Their Costs	573
22.2.2	Competing Technologies/Products in Development: The Importance of Biotechnology	575

22.3	Sugarcane-Based Biorefineries in Brazil: Status	581
22.3.1	An Industry with a History of Evolution	581
22.3.2	Existing Biorefineries in Brazil	582
22.3.2.1	Bioethylene and Biopolyethylene	582
22.3.2.2	Terpenoids	582
22.3.2.3	Other Biorefineries	583
22.4	A Method for Technical Economic Evaluation	583
22.4.1	Braskem's Roadmap for Chemicals from RRM's	583
22.4.2	Braskem's Method for the Evaluating the Chemicals Produced from RRM's	585
22.5	The Sugarcane Biorefinery of the Future: Model Comparison	589
22.5.1	Conventional Sugarcane Ethanol Plant	589
22.5.2	Stand-Alone Cellulosic Ethanol Plant	591
22.5.3	Integrated Conventional and Cellulosic Ethanol Factory	591
22.5.4	Biorefinery Producing Ethanol, Raw Sugar, and Succinic Acid	593
22.5.5	Biorefinery Producing Ethanol, Raw Sugar, Succinic Acid, and Butanol	594
22.5.6	Model Comparison	595
22.6	Conclusions	596
	References	598
