Preface	viii
Acknowledgments	x
Introduction	1
The Bobaths: A Historical Overview	1
The International Bobath Instructors Training Association—IBITA	1
IBITA's Theoretical Assumptions and Clinical Practice	2
1 Applied Neurophysiology	3
1.1 The Organization of the Central Nervous System: An Overview	3
The Building Blocks of the CNS	4
Communication within the Nervous System	5
1.2 Systems Control: Systems and Structures Concerned with Movement and Sensorimotor Integration	10
The Somatosensory System	10
The Cortical Motor System	27
The Cerebellum	35
The Brain Stem	43
The Vestibular System	46
The Spinal Cord	50
The Neuromuscular System	53
1.3 Motor Learning and Plasticity	62
Introduction	62
Motor Learning	64
Neuroplasticity	67
Cortical Plasticity	71
Plasticity in the Spinal Cord	72
Theories of Recovery after a CNS Lesion	73
1.4 Consequences of and Reorganization after CNS Lesions	81
Upper Motor Neuron Lesions	81
2 Human Movement	89
2.1 Balance and Movement	90
Human Movement Control	90
Balance	91
The Neural Mechanisms Contributing to the Origin of Postural Control	95
Mechanisms	95
The Function of Postural Control	96
Multisensory Integration for Postural Control	97
Postural Control and Biomechanical Conditions	99
Trunk Control	100
Postural Control and Cognition	101
Postural Tone	101
Selective Movement	104
Deviations from Normal Human Movement and Balance Control	106
Compensation	108
2.2 Interventions—Considerations and Choices	116
Postural Sets	116
Analysis of Basic Postures and Postural Sets	117
Key Areas	138
Selective Movement and Functional Activity	140
The Relationship between Automatic and Voluntary Movement	142
Handling	146
Active Movement; Learned Nonuse; Neglect; Passive Movement	155
Control of Associated Reactions	158
Feedback	159
Carryover	160
2.3 Other Interventions: Some Key Points	163
Strength Training	163
Treadmill Training	164
Constraint-Induced Movement Therapy	165
Multidisciplinary Teamwork	166
Assistive Devices	167
3 Assessment	177
3.1 The International Classification of Functioning, Disability, and Health	177
3.2 Physiotherapy Assessment	178
History	179
Communication	180
Functional Activity	180

Body Functions and Structures	182	Clinical Reasoning and the Formation of Hypotheses	207
Sensation, Perception, and Learned Nonuse	185	Intervention	208
Pain	187	Evaluation	218
Clinical Reasoning	189	Discussion	221
The Aim of Assessment	190	Conclusion	221
3.3 Outcome Measures	195	4.2 Cerebellar Ataxia: Assessment, Treatment, and Evaluation	226
Measures: Body Domain	195	Social History and Activities	226
Activity Measures	196	Medical History	226
Self-Report Measures	197	Initial Assessment	226
Objective Goal Setting	198	Clinical Reasoning	226
Assessment Diagram	198	Initial Standing Posture	228
Evaluation and Documentation	199	Hypotheses	228
Conclusion	199	Outcome Measures	228
4 Case Histories	201	Intervention	229
4.1 Chronic Stroke: Assessment, Treatment, and Evaluation	201	Evaluation	238
Social History and Activities	201	Outcome Measures	239
Medical History	201	Discussion	239
Initial Assessment	201	Conclusion	244
 Bibliography	 245		
Index	277
