Foreword	V
About the Authors	VII
Acknowledgements	IX
1 Basics, Definitions, and Application Levels	1
1.1 Systematics of Manufacturing Technologies	1
1.2 Systematics of Layer Technology	2
1.2.1 Application of Layer Technology: Additive Manufacturing and 3D Printing	3
1.2.2 Characteristics of Additive Manufacturing	3
1.3 Hierarchical Structure of Additive Manufacturing Processes	6
1.3.1 Rapid Prototyping	7
1.3.2 Rapid Manufacturing	9
1.3.2.1 Rapid Manufacturing—Direct Manufacturing	9
1.3.2.2 Rapid Manufacturing—Rapid Tooling (Direct Tooling— Prototype Tooling)	10
1.3.3 Related Nonadditive Processes: Indirect or Secondary Rapid Prototyping Processes	10
1.3.4 Rapid Prototyping or Rapid Manufacturing?	11
1.3.5 Diversity of Terms	12
1.3.6 How Fast Is Rapid?	13
1.4 Integration of Additive Manufacturing in the Product Development Process	13
1.4.1 Additive Manufacturing and Product Development	13
1.4.2 Additive Manufacturing for Low-Volume and One-of-a-Kind Production	15
1.4.3 Additive Manufacturing for Individualized Production	15
1.5 Machines for Additive Manufacturing	16

2	Characteristics of the Additive Manufacturing Process	21
2.1	Basic Principles of the Additive Manufacturing Process	21
2.2	Generation of Layer Information	26
2.2.1	Description of the Geometry by a 3D Data Record	26
2.2.1.1	Data Flow and Interfaces	26
2.2.1.2	Modeling 3D Bodies in a Computer by Means of 3D CAD	28
2.2.1.3	Generating 3D Models from Measurements	32
2.2.2	Generation of Geometrical Layer Information on Single Layers	33
2.2.2.1	STL Format	34
2.2.2.2	CLI/SLC Format	38
2.2.2.3	PLY and VRML Formats	41
2.2.2.4	AMF Format	43
2.3	Physical Principles for Layer Generation	44
2.3.1	Solidification of Liquid Materials	45
2.3.1.1	Photopolymerization—Stereolithography (SL)	45
2.3.1.2	Basic Principles of Polymerization	46
2.3.2	Generation from the Solid Phase	57
2.3.2.1	Melting and Solidification of Powders and Granules: Laser Sintering (LS)	57
2.3.2.2	Cutting from Foils: Layer Laminate Manufacturing (LLM)	65
2.3.2.3	Melting and Solidification out of the Solid Phase: Fused Layer Modeling (FLM)	66
2.3.2.4	Conglutination of Granules and Binders: 3D Printing	69
2.3.3	Solidification from the Gas Phase	71
2.3.3.1	Aerosol Printing Process	71
2.3.3.2	Laser Chemical Vapor Deposition (LCVD)	72
2.3.4	Other Processes	73
2.3.4.1	Sonoluminescence	73
2.3.4.2	Electroviscosity	74
2.4	Elements for Generating the Physical Layer	74
2.4.1	Moving Elements	74
2.4.1.1	Plotter	74
2.4.1.2	Scanner	75
2.4.1.3	Simultaneous Robots (Delta Robots)	76
2.4.2	Generating and Contouring Elements	76
2.4.2.1	Laser	77
2.4.2.2	Nozzles	79
2.4.2.3	Extruder	81
2.4.2.4	Cutting Blade	82
2.4.2.5	Milling Cutter	82
2.4.3	Layer-Generating Element	83

2.5	Classification of Additive Manufacturing Processes	84
2.6	Summary Evaluation of the Theoretical Potentials of Rapid Prototyping Processes	86
2.6.1	Materials	87
2.6.2	Model Properties	88
2.6.3	Details	89
2.6.4	Accuracy	90
2.6.5	Surface Quality	90
2.6.6	Development Potential	91
2.6.7	Continuous 3D Model Generation	91
3	Machines for Rapid Prototyping, Direct Tooling, and Direct Manufacturing	93
3.1	Polymerization: Stereolithography (SL)	97
3.1.1	Machine-Specific Basis	97
3.1.1.1	Laser Stereolithography	97
3.1.1.2	Digital Light Processing	107
3.1.1.3	PolyJet and MultiJet Modeling and Paste Polymerization	108
3.1.2	Overview: Polymerization, Stereolithography	108
3.1.3	Stereolithography Apparatus (SLA), 3D Systems	110
3.1.4	STEREOS, EOS	120
3.1.5	Stereolithography, Fockele & Schwarze	121
3.1.6	Microstereolithography, microTEC	122
3.1.7	Solid Ground Curing, Cubital	125
3.1.8	Digital Light Processing, Envisiontec	126
3.1.9	Polymer Printing, Stratasys/Objet	132
3.1.10	Multijet Modeling (MJM), ProJet, 3D Systems	137
3.1.11	Digital Wax	140
3.1.12	Film Transfer Imaging, 3D Systems	143
3.1.13	Other Polymerization Processes	146
3.1.13.1	Paste Polymerization, OptoForm	146
3.2	Sintering/Selective Sintering: Melting in the Powder Bed	146
3.2.1	Machine-Specific Basic Principles	146
3.2.2	Overview: Sintering and Melting	151
3.2.3	Selective Laser Sintering, 3D Systems/DTM	153
3.2.4	Laser Sintering, EOS	165
3.2.5	Laser Melting, Realizer GmbH	176
3.2.6	Laser Sintering, SLM Solutions	180
3.2.7	Laser Melting, Renishaw Ltd.	182
3.2.8	Laser Cusing, Concept Laser	185
3.2.9	Direct Laser Forming, TRUMPF	191

3.2.10	Electron Beam Melting	192
3.2.11	Selective Mask Sintering (SMS), Sintermask	197
3.2.12	Laser Sintering, Phenix	200
3.3	Coating: Melting with the Powder Nozzle	203
3.3.1	Process Principle	203
3.3.1.1	Concepts of Powder Nozzles	205
3.3.1.2	Process Monitoring and Control	206
3.3.2	Laser-Engineered Net Shaping (LENS), Optomec	206
3.3.3	Direct Metal Deposition (DMD), DM3D Technology (TRUMPF) ...	209
3.4	Layer Laminate Manufacturing (LLM)	213
3.4.1	Overview of Layer Laminate Manufacturing	213
3.4.2	Machine-Specific Basics	214
3.4.3	Laminated Object Manufacturing (LOM), Cubic Technologies ...	218
3.4.4	Rapid Prototyping Systems (RPS), Kinergy	223
3.4.5	Selective Adhesive and Hot Press Process (SAHP), Kira	224
3.4.6	Layer Milling Process (LMP), Zimmermann	225
3.4.7	Stratoconception, rp2i	225
3.4.8	Paper 3D Printing, MCor	226
3.4.9	Plastic Sheet Lamination, Solido	228
3.4.10	Other Layer Laminate Methods	231
3.4.10.1	Parts of Metal Foils: Laminated Metal Prototyping	231
3.5	Extrusion: Fused Layer Modeling (FLM)	232
3.5.1	Overview of Extrusion Processes	232
3.5.2	Fused Deposition Modeling (FDM), Stratasys	233
3.5.3	Wax Printers, Solidscape	244
3.5.4	Multijet Modeling (MJM), ThermoJet, 3D Systems	247
3.6	Three-Dimensional Printing (3DP)	248
3.6.1	Overview: 3D Printing	248
3.6.2	3D Printer, 3D Systems, and Z Corporation	248
3.6.3	Metal and Molding Sand Printer, ExOne	253
3.6.3.1	Metal Line: Direct Metal Printer	255
3.6.3.2	Molding Sand Line: Direct Core and Mold-Making Machine	257
3.6.4	Direct Shell Production Casting (DSPC), Soligen	259
3.6.5	3D Printing System, Voxeljet	263
3.6.6	Maskless Mesoscale Material Deposition (M3D), Optomec	267
3.7	Hybrid Processes	269
3.7.1	Controlled Metal Buildup (CMB)	270
3.7.2	Laminating and Ultrasonic Welding: Ultrasonic Consolidation, Solidica	272

3.8	Summary Evaluation of Rapid Prototyping Processes	276
3.8.1	Characteristic Properties of AM Processes Compared to Conventional Processes	276
3.8.2	Accuracy	279
3.8.3	Surfaces	282
3.8.4	Benchmark Tests and User Parts	285
3.9	Planning Targets	288
3.10	Follow-up Processes	289
3.10.1	Target Material: Plastics	289
3.10.2	Target Material: Metal	290
4	Rapid Prototyping	291
4.1	Classification and Definition	291
4.1.1	Properties of Prototypes	291
4.1.2	Characteristics of Rapid Prototyping	292
4.2	Strategic Aspects for the Use of Prototypes	293
4.2.1	Product Development Steps	293
4.2.2	Time to Market	294
4.2.3	Front Loading	295
4.2.4	Digital Product Model	298
4.2.5	The Limits of Physical Modeling	299
4.2.6	Communication and Motivation	300
4.3	Operational Aspects in the Use of Prototypes	301
4.3.1	Rapid Prototyping as a Tool for Fast Product Development	301
4.3.1.1	Models	301
4.3.1.2	Model Classes	302
4.3.1.3	Model Classes and Additive Processes	305
4.3.1.4	Assignment of Model Classes and Model Properties to the Families of Additive Production Processes	309
4.3.2	Applications of Rapid Prototyping in Industrial Product Development	312
4.3.2.1	Example: Housing of a Pump	312
4.3.2.2	Example: Office Lamp	313
4.3.2.3	Example: Recessed Lighting Socket	317
4.3.2.4	Example: Model Digger Arm	318
4.3.2.5	Example: LCD Projector	322
4.3.2.6	Example: Capillary Bottom for Flower Pots	323
4.3.2.7	Example: Casing for a Coffeemaker	324
4.3.2.8	Example: Intake Manifold of a Four-Cylinder Engine	325
4.3.2.9	Example: Cocktail Glass	326

4.3.2.10 Example: Mirror Triangle	327
4.3.2.11 Example: Convertible Top	327
4.3.3 Rapid Prototyping Models for the Visualization of 3D Data	331
4.3.4 Rapid Prototyping in Medicine	332
4.3.4.1 Characteristics of Medical Models	332
4.3.4.2 Anatomic Facsimile Models	333
4.3.4.3 Example: Anatomic Facsimiles for a Reconstructive Osteotomy	335
4.3.5 Rapid Prototyping in Art, Archaeology, and Architecture	336
4.3.5.1 Model Making in Art and Design, General	336
4.3.5.2 Example of Art: Computer Sculpture, Georg Glückman ..	337
4.3.5.3 Example of Design: Bottle Opener	337
4.3.5.4 Applied Art: Statuary and Sculpture	339
4.3.5.5 Example of Archaeology: Bust of Queen Teje	340
4.3.5.6 Model Building in Architecture, General	341
4.3.5.7 Example of Architecture: German Pavilion at Expo '92 ..	342
4.3.5.8 Example of Architecture: Ground Zero	342
4.3.5.9 Example of Architectural Monuments: Documentation of Buildings Relevant to Architectural History	344
4.3.6 Rapid Prototyping for the Evaluation of Calculation Methods	345
4.3.6.1 Photoelastic and Thermoelastic Stress Analysis	345
4.3.6.2 Example: Photoelastic Stress Analysis for a Cam Rod in the Engine of a Truck	348
4.3.6.3 Example: Thermoelastic Stress Analysis for Verifying the Stability of a Car Wheel Rim	349
4.4 Outlook	352
5 Rapid Tooling	353
5.1 Classification and Definition of Terms	353
5.1.1 Direct and Indirect Methods	354
5.2 Properties of Additive Manufactured Tools	355
5.2.1 Strategic Aspects for the Use of Additive Manufactured Tools ...	356
5.2.1.1 Speed	356
5.2.1.2 Implementation of New Technical Concepts	356
5.2.2 Design Properties of Additive Manufactured Tools	358
5.2.2.1 Prototype Tools	358
5.2.2.2 Supply of Data	361
5.3 Indirect Rapid Tooling Processes: Molding Processes and Follow-up Processes	363
5.3.1 Suitability of AM Processes for the Manufacture of Master Patterns for Subsequent Processes	363

5.3.2	Indirect Methods for the Manufacture of Tools for Plastic Components	365
5.3.2.1	Casting in Soft Tools or Molds	365
5.3.2.2	Casting into Hard Tools	370
5.3.2.3	Other Molding Techniques for Hard Tools	374
5.3.3	Indirect Methods for the Manufacture of Metal Components	375
5.3.3.1	Investment Casting with AM Process Steps	375
5.3.3.2	Tools by Investment Casting of Rapid Prototyping Master Models	378
5.4	Direct Rapid Tooling Processes	379
5.4.1	Prototype Tooling: Tools Based on Plastic Rapid Prototyping Models and Methods	379
5.4.1.1	ACES Injection Molding	379
5.4.1.2	Deep Drawing or Thermoforming	380
5.4.1.3	Casting of Rapid Prototyping Models	381
5.4.1.4	Manufacture of Cores and Molds for Metal Casting	382
5.4.2	Metal Tools Based on Multilevel AM Processes	383
5.4.2.1	Selective Laser Sintering of Metals: IMLS by 3D Systems	383
5.4.2.2	Paste Polymerization: OptoForm	384
5.4.2.3	3D Printing of Metals: ExOne	384
5.4.3	Direct Tooling: Tools Based on Metal Rapid Prototype Processes	385
5.4.3.1	Multicomponent Metal Powder Laser Sintering	385
5.4.3.2	Single-Component Metal Powder Methods: Sintering and Additive Manufacturing	386
5.4.3.3	Laser Generating with Powder and Wire	391
5.4.3.4	Layer Laminate Process, Metal Blade Tools, Laminated Metal Tooling	393
5.5	Future Prospects	394
6	Direct Manufacturing: Rapid Manufacturing	395
6.1	Classification and Definition of Terms	395
6.1.1	Terms	396
6.1.2	From Rapid Prototyping to Rapid Manufacturing	397
6.1.3	Workflow for Direct Manufacturing	398
6.1.4	Requirements for Direct Manufacturing	398
6.2	Potential for Additive Manufacturing of End Products	399
6.2.1	Increased Design Freedom	399
6.2.1.1	Advanced Design and Structural Opportunities	399
6.2.1.2	Functional Integration	400
6.2.1.3	Novel Design Elements	401
6.2.2	Production of Traditionally Not Producible Products	401

6.2.3	Variation of Mass Products	402
6.2.4	Personalization of Mass Products	403
6.2.4.1	Passive Personalization: Manufacturer Personalization ..	404
6.2.4.2	Active Personalization: Customer Personalization	406
6.2.5	Realization of New Materials	407
6.2.6	Realization of New Manufacturing Strategies	407
6.2.7	Design of New Labor and Living Alternatives	408
6.3	Requirements on Additive Manufacturing for Production	409
6.3.1	Requirements on Additive Manufacturing of a Part	410
6.3.1.1	Process	410
6.3.1.2	Materials	411
6.3.1.3	Organization	413
6.3.1.4	Design	413
6.3.1.5	Quality Assurance	414
6.3.1.6	Logistics	414
6.3.2	Requirements for Additive Mass Production with Current Methods	414
6.3.2.1	Process	415
6.3.2.2	Materials	417
6.3.2.3	Organization	417
6.3.2.4	Design	418
6.3.2.5	Quality Assurance	418
6.3.2.6	Logistics	418
6.3.3	Future Efforts in Additive Series Production	418
6.3.3.1	Process	419
6.3.3.2	Materials	421
6.3.3.3	Organization	422
6.3.3.4	Design	422
6.3.3.5	Quality Assurance	423
6.3.3.6	Logistics	424
6.4	Implementation of Rapid Manufacturing	424
6.4.1	Additive Manufacturing Machines as Elements of a Process Chain	425
6.4.2	Additive Machines for Complete Production of Products	426
6.4.2.1	Industrial Complete Production	426
6.4.2.2	Individual Complete Production (Personal Fabrication) ..	428
6.5	Application Fields	429
6.5.1	Application Fields for Materials	430
6.5.1.1	Metallic Materials and Alloys	430
6.5.1.2	High-Performance Ceramics	431

6.5.1.3	Plastics	432
6.5.1.4	New Materials	433
6.5.2	Application Fields by Industry	433
6.5.2.1	Tooling	433
6.5.2.2	Casting	435
6.5.2.3	Medical Equipment and Aids, Medical Technology	438
6.5.2.4	Design and Art	443
6.6	Summary	448
7	Safety and Environmental Protection	451
7.1	Labor Agreements for the Operation and Production of Additive Manufacturing Machines and the Handling of the Corresponding Material ..	452
7.2	Annotations to Materials for Additive Manufacturing	453
7.3	Annotations for Using Additive Manufactured Components	454
8	Economic Aspects	457
8.1	Strategic Aspects	458
8.1.1	Strategic Aspects of the Use of AM Methods in Product Development	458
8.1.1.1	Qualitative Approaches	458
8.1.1.2	Quantitative Approaches	459
8.2	Operative Aspects	460
8.2.1	Establishing the Optimal Additive Manufacturing Process	460
8.2.2	Establishing the Costs of Additive Manufacturing Processes	461
8.2.2.1	Variable Costs	462
8.2.2.2	Fixed Costs	464
8.2.3	Characteristics of Additive Manufacturing and Its Impacts on Economy	467
8.2.3.1	Construction Time	467
8.2.3.2	Lot Sizes and Use of Construction Space	467
8.2.3.3	Utilization	468
8.2.3.4	Material Consumption	468
8.2.3.5	Process Safety	469
8.2.3.6	Construction Speed	469
8.2.3.7	Technical Progress and Model Refinement	471
8.2.3.8	Service	471
8.3	Make or Buy?	472

9	Future Rapid Prototyping Processes	475
9.1	Microcomponents	475
9.1.1	Microcomponents Made of Metal and Ceramic	475
9.1.2	Microcomponents Made of Metal and Ceramics by Laser Melting	476
9.1.2.1	Melting Process in Selective Laser Melting	476
9.1.2.2	Microstructures of Metal Powder	477
9.1.2.3	Microstructures of Ceramic Powder	480
9.2	Contour Crafting	482
9.3	D-Shape Process	484
9.4	Selective Inhibition of Sintering (SIS)	487
9.4.1	The SIS-Polymer Process	487
9.4.2	The SIS-Metal Process	489
9.5	Free Molding	491
9.6	Freeformer	492
10	Appendix	493
	Glossary	569
11	Bibliography	575
	Index	581
