List of Figures, Definitions and Key Propositions	x
List of Symbols	xv
Foreword	xvii
1. Introduction: Where Do We Stand?	1
1.1 Tasks and Aims of Philosophy of Science	1
1.2 On the Historical Development of Philosophy of Science	3
1.3 Philosophical Positions in Contemporary Philosophy of Science	5
1.3.1 Logical Empiricism 5; 1.3.2 Critical Rationalism 7; 1.3.3 The Historical Account and Relativism 8; 1.3.4 Metaphysical and Scientific Realism 10; 1.3.5 Snapshots of Further Positions 12	
1.4 Introductory Literature and Exercises	15
2. The Question of Unity: In Search of Common Foundations of the Sciences	16
2.1 Normative or Descriptive? The Method of Rational Reconstruction	16
2.2 Common Epistemological Assumptions	22
2.3 Common Methodological Features	25
2.4 Scientific Disciplines and Their Classification	27
2.4.1 The Special Status of Mathematical Sciences 30; 2.4.2 Testing the Common Foundations of Science 31; 2.4.3 Two Further Classifications of Sciences 34	
2.5 The Question of Value-Neutrality	37
2.5.1 Max Weber's Value-Freedom Postulate and Its Critics 37; 2.5.2 Value-Neutrality and Means-End Inferences 39; 2.5.3 Explication of the Value-Neutrality Requirement 41	

2.6 The Demarcation Problem and the Methodological Unity of Sciences	44
2.6.1 Demarcation 44; 2.6.2 Methodological Unity Instead of Physical Reductionism 46	
2.7 Scientific Inference and Argumentation	49
2.7.1 Deduction and Induction 49; 2.7.2 Popper and the Significance of Inductive Inference in the Sciences 52; 2.7.3 Abduction and Inference to the Best Explanation 55; 2.7.4 Monotonic and Non-Monotonic Inferences 58	
<i>Complementary and Advanced Topics</i>	
2.8 How Much Metaphysics is Presupposed by Science?	59
2.8.1 Truth, Idealism and Realism 59; 2.8.2 Constructive Realism versus Radical Constructivism 61	
2.9 On the Theory (In)dependence of Observation	63
2.9.1 Theory-Dependency of Observation—Pros and Cons 65; 2.9.2 A Definition of Theory-Neutral Observation Concepts 72	
2.10 Value-Neutrality in the Context of Contemporary Debates	75
2.10.1 The Role of Values in Science 75; 2.10.2 Value-Neutrality in the Context of Meta-Ethics 77; 2.10.3 On the Difference between Sense Experiences and Value “Experiences” 78	
2.11 The Justification of Induction: An Unsolvable Problem?	80
2.12 Introductory Literature and Exercises	85
3 The Conceptual Toolkit: Language, Logic and Probability	88
3.1 Kinds and Classification of Concepts	88
3.1.1 The Logical Type of Concepts 88; 3.1.2 Formalization: Syntax and Semantics, Statements and Models 92; 3.1.3 The Content Type of Concepts 96; 3.1.4 The Gradation (Scale) Type of Concepts 99	
3.2 Classification of Sentences According to Their Content Type	105
3.2.1 Descriptive versus Prescriptive Sentences 106; 3.2.2 Observation and Basic Sentences, Empirical and Theoretical Sentences 107	
3.3 Logical Truth and Deductive Logic	110
3.4 Conventions of Meaning and Definitional Truths	113
3.5 Classification of Sentences According to Their Generality	117
3.6 General Sentences, Lawlikeness, Determinism and Indeterminism	122
3.7 Content of Sentences and Kinds of Content	126
3.8 Verification, Falsification, Confirmation and Disconfirmation	128
3.9 Probability	129
3.9.1 Objective (Statistical) versus Epistemic (Subjective) Probability 129; 3.9.2 Mathematical Laws of Probability 133	
<i>Complementary and Advanced Topics</i>	
3.10 Disposition Concepts	135
3.11 Challenges to the Logical-Definitional-Synthetic Distinction	140

3.12 Relevance and Irrelevance in Logical Inferences	143
3.13 More on Probability	147
3.13.1 Construction of Probability Models and Sigma-Additivity	147;
3.13.2 Binomial Distribution and Law of Large Numbers	150;
3.13.3 Problems of Objective-Statistical Probability Concepts	152;
3.13.4 Problems of Subjective-Epistemic Probability Concepts	158;
3.13.5 Connections between Objective and Epistemic Probabilities: a Dualist Account	161
3.14 Introductory Literature and Exercises	168
4 A Question of Fit: Law Hypotheses and Their Empirical Testing	172
4.1 The Condition of Relevance	173
4.1.1 Relevance of Strict Laws	173;
4.1.2 Relevance of Statistical Laws	176
4.2 Testing of Strict Law Hypotheses for Truth and Relevance	181
4.2.1 The Method of Agreement and Difference	181;
4.2.2 Methodological Induction: How to Discover Strict Law Hypotheses	185
4.3 Testing Statistical Laws	188
4.3.1 Testing for Likely Truth and Acceptance Intervals	188;
4.3.2 Discovery of Statistical Hypotheses and Confidence Intervals	191;
4.3.3 Testing for Relevance and Significant Differences	193;
4.3.4 Statistical Representativity	196;
4.3.5 Test Statistics and Inference Statistics	198;
4.3.6 Sources of Error in Statistical Methods	200;
4.3.7 Applying Statistical Hypotheses to Individual Cases	203
4.4 Correlation and Causality	204
4.4.1 Hidden Variables	204;
4.4.2 Causal Direction	211
<i>Complementary and Advanced Topics</i>	
4.5 Ceteris Paribus and Normic Laws	214
4.5.1 Comparative versus Exclusive CP Laws	214;
4.5.2 Normic Laws and Their Evolution-Theoretic Foundation	219
4.6 Probability Distributions for Continuous Variables	221
4.7 Bayesian Statistics	226
4.7.1 The Likelihood-Intuition: Objections and Replies	226;
4.7.2 The Bayesian Justification of the Likelihood-Intuition	229;
4.7.3 Objective Bayesianism and the Principle of Indifference	232;
4.7.4 Subjective Bayesianism and Convergence of Opinions	235
4.8 Introductory Literature and Exercises	238
5 Going Beyond Experience: Theories and Their Empirical Evaluation	242
5.1 Theoretical Concepts and Multiple Laws of Correspondence	242
5.2 The Example of Newtonian Physics	255
5.3 Theory Statics: The Structure of Scientific Theories	263
5.3.1 Components of Scientific Theories	263;
5.3.2 Theory Nets and Intertheoretical Relations	266

5.4 Methodological Features of (Good) Scientific Theories	268
5.4.1 System Character: Holism of Meaning, Content, and Theory Testing (Duhem's Thesis) 268; 5.4.2 Empirical Creativity, Global Unification, and Novel Predictions: Answers to Hempel's Dilemma 270	
5.5 The Example of Piaget's Theory of Cognitive Development	272
5.6 Theory Dynamics	278
5.6.1 Lakatos' Model of Theory Revision 278; 5.6.2 Theory Evaluation and Theory Progress 281	
<i>Complementary and Advanced Topics</i>	
5.7 Instrumentalism and Realism: The Ontology of Scientific Theories	291
5.7.1 Versions of Instrumentalism and Realism 291; 5.7.2 No Miracles Argument versus Pessimistic Meta-Induction 294; 5.7.3 Empirical Underdetermination and Use-Novel Evidence 295; 5.7.4 Intertheoretical Correspondence, Structural Realism and the Justification of Abduction 296	
5.8 The Ramsey Sentence of a Theory: (Non-) Eliminability of Theoretical Concepts	299
5.8.1 Ramsey Sentence and Carnap Sentence 299; 5.8.2 Instrumentalist Interpretation of the Ramsey Sentence 301; 5.8.3 The Realist Interpretation of the Ramsey Sentence 303; 5.8.4 Lewis Definitions 305	
5.9 Criteria for Theoreticity and Empirical Significance	307
5.9.1 Pre-Theoretical and Theoretical Concepts 307; 5.9.2 Empirical Significance 311	
5.10 General Accounts of Confirmation	313
5.10.1 Hypothetico-Deductive Confirmation 314; 5.10.2 Bayesian Probabilistic Confirmation 318; 5.10.3 Bayesian Pseudo-Confirmation through Content-Cutting 320; 5.10.4 Latent Variables, Parameter Fitting and Use-Novel Evidence 322; 5.10.5 Curve Fitting 326; 5.10.6 Genuine Probabilistic Confirmation 329; 5.10.7 Goodman's Paradox 331; 5.10.8 Confirmation and Acceptance 333	
5.11 Non-Confirmational Accounts of Theory Evaluation	336
5.11.1 Truthlikeness 336; 5.11.2 Unification, Coherence and Simplicity 340; 5.11.3 The Problem of Language Dependence 342	
5.12 Introductory Literature and Exercises	345
6 In Search of Causes: Explanation and All That Goes With It	348
6.1 The Deductive-Nomological Model of Explanation	348
6.2 Explanation versus Prediction and Justification	351
6.2.1 Predictions without Explanatory Function 352; 6.2.2 Causality and Lawlikeness 353; 6.2.3 Explanations without Predictive Function 355; 6.2.4 Logical Problems of Irrelevance and Redundancy 356	
6.3 Probabilistic Explanation Models	357
6.3.1 Inductive-Statistical Explanation 357; 6.3.2 Maximal Specificity 359; 6.3.3 Probabilistic and Causal Relevance Models 361; 6.3.4 Conflicting Intuitions about the Height of Explanatory Probabilities 362	

6.4 Normic Explanations and the Explanation of Human Actions	365										
6.5 Expectation, Causation and Unification: Explanation as a Prototype Concept	367										
<i>Complementary and Advanced Topics</i>											
6.6 Lawlikeness	370										
6.6.1 Laws of Nature versus System Laws	371; 6.6.2 Lawlikeness in the Wide versus Narrow Sense	372; 6.6.3 Lawlikeness i.w.s., Counterfactuals and Inductive Projectibility	373; 6.6.4 Spatiotemporal Universality and Maxwell's Condition	375; 6.6.5 The Best System Account	377; 6.6.6 Physical Necessity and Independent Possibility Knowledge	380					
6.7 Causality	382										
6.7.1 Singular and General Causality	382; 6.7.2 Regularity Accounts	384; 6.7.3 Counterfactuals and Causal Powers	385; 6.7.4 Causation and the Direction of Time	386; 6.7.5 Causal Processes and Mechanisms	387; 6.7.6 Interventionist Accounts	388; 6.7.7 Causality as a Theoretical Concept	389; 6.7.8 Axioms of Causality: C-connection, Productivity and Faithfulness	395; 6.7.9 Causal Discovery	402; 6.7.10 Empirical Content of GTC	403; 6.7.11 From Variables to Events: Overdetermination and Causal Pre-emption	406
6.8 Introductory Literature and Exercises	407										
Bibliography	411										
Solutions to Selected Exercises	435										
Index of Names	440										
Index of Subjects	447
