1	Introduction	1
1.1	Historical Survey	1
1.2	Scope	5
	References	7
2	Models for Polymer Chains	9
2.1	Discrete Models	9
2.1.1	Average Chain Dimensions	9
2.1.2	Random-Flight Chains: The Gaussian Chain	11
2.1.3	Freely Rotating Chains	11
2.1.4	Chains with Coupled Rotations: The Rotational Isomeric State Model	13
2.2	Continuous Models	15
	References	18
3	Chain Statistics: Wormlike Chains	21
3.1	Definition of the Model	21
3.2	Diffusion Equations	23
3.2.1	Green Functions	23
3.2.2	Fokker-Planck Equations	24
3.2.3	Path Integrals and Formal Solutions	27
3.3	Moments	31
3.3.1	$\langle (\mathbf{R} \cdot \mathbf{u}_0)^n \rangle$	31
3.3.2	$\langle R^{2m} \rangle$	33
3.4	Distribution Functions	34
3.4.1	Asymptotic Behavior: Daniels-Type Distributions	34
3.4.2	Near the Rod Limit	39
3.5	Discrete Version of the Wormlike Chain	43
	References	57

4	Chain Statistics: Helical Wormlike Chains	59
4.1	Formulation of the Model	59
4.2	Diffusion Equations	64
4.2.1	Path Integrals and Fokker–Planck Equations	64
4.2.2	The Free-Particle Green Function	67
4.2.3	Formal Solutions	70
4.3	Moments	72
4.3.1	$\langle (\mathbf{R} \cdot \mathbf{u}_0)^n \rangle$	73
4.3.2	$\langle R^{2m} \rangle$ and $\langle S^2 \rangle$	74
4.3.3	Persistence Vector	77
4.4	Angular Correlation Functions	80
4.4.1	Explicit Expressions for $\sigma = 0$	81
4.4.2	The Rotational Isomeric State Model	82
4.4.3	Symmetry Relations	86
4.4.4	Numerical Results	88
4.5	Helical Nature of the Chain	92
4.6	Distribution Functions	93
4.6.1	General Developments	94
4.6.2	Daniels-Type Distributions	97
4.6.3	Moment-Based Distributions	101
4.6.4	Convergence	104
4.7	Approximations	106
4.7.1	Weighting Function Method	106
4.7.2	Epsilon Method	111
4.7.3	Convergence	114
4.8	Some Other Topics	116
4.8.1	Multivariate Distribution Functions, etc.	116
4.8.2	Temperature Coefficients of $\langle R^2 \rangle$	116
	References	126
5	Equilibrium Properties	129
5.1	Mean-Square Radius of Gyration	129
5.1.1	Basic Equations and Model Parameters	129
5.1.2	Chain Stiffness and Local Chain Conformations	132
5.1.3	HW Monte Carlo Chains	134
5.2	Scattering Function	136
5.2.1	Scattering Function for the Chain Contour	136
5.2.2	Comparison with the RIS Model	142
5.2.3	Effects of Chain Thickness	144
5.2.4	Comparison with Experiment	149
5.2.5	Ring Polymers	153
5.3	Anisotropic Light Scattering: Mean-Square Optical Anisotropy	155
5.3.1	Basic Equations	155
5.3.2	Components of the Scattered Intensity	158

5.3.3	Mean-Square Optical Anisotropy	164
5.3.4	Isotropic Scattering Function	169
5.3.5	Near the Rod Limit	172
5.4	Electrical Properties	175
5.4.1	Mean-Square Electric Dipole Moment	175
5.4.2	Electric Birefringence	179
5.4.3	Electric Dichroism	183
	References	189
6	Transport Properties	193
6.1	General Consideration of Polymer Hydrodynamics	193
6.2	Hydrodynamic Models	195
6.2.1	Cylinder Model	195
6.2.2	Touched-Bead Model	200
6.3	Translational Friction Coefficient	202
6.3.1	Cylinder Model	202
6.3.2	Touched-Bead Model	207
6.4	Intrinsic Viscosity	208
6.4.1	Cylinder Model	208
6.4.2	Touched-Bead Model	215
6.5	Analysis of Experimental Data	219
6.5.1	Basic Equations and Model Parameters	219
6.5.2	Reduced Hydrodynamic Volume and Radius	224
6.5.3	Negative Intrinsic Viscosity	227
6.5.4	Draining Effect	229
6.6	Ring Polymers	230
6.6.1	Translational Friction Coefficient	230
6.6.2	Intrinsic Viscosity	232
6.6.3	Application to DNA	234
	References	247
7	Applications to Circular DNA	251
7.1	Ring-Closure Probabilities	251
7.1.1	Definitions	251
7.1.2	Linking-Number-Dependent Ring-Closure Probability	253
7.1.3	Ring-Closure Probability with the End Orientations Specified	259
7.1.4	Other Ring-Closure Probabilities	263
7.1.5	Comparison with Experiment	267
7.2	Topoisomer Statistics	270
7.2.1	Basic Concepts and Equations	270
7.2.2	Distribution of the Writhe	272
7.2.3	Moments of the Writhe	276
7.2.4	Distribution of the Linking Number	279
7.2.5	Mean-Square Radii of Gyration	281

7.3	Translational Friction Coefficient of Topoisomers.....	285
	References.....	289
