Preface — vi

Foreword — vii

1 Introduction — 1

- 1.1 Scope of the discipline and historical review — 1
- 1.2 Structure and acoustic properties of the atmosphere — 5
 - 1.2.1 Stratification structure of the atmosphere — 5
 - 1.2.2 Turbulence structure of the atmosphere — 7
 - 1.2.3 The acoustic properties of the atmosphere — 9
- 1.3 Thermodynamic relationships in the atmosphere — 12
 - 1.3.1 Equation of state and adiabatic equation — 12
 - 1.3.2 Barometric equation and scale height, isothermal atmosphere and atmosphere with constant temperature gradient — 13
 - 1.3.3 Potential temperature and Vaisala-Brunt frequency — 15
- 1.4 Fundamental relations of atmospheric dynamics — 17
 - 1.4.1 Equation of motion — 17
 - 1.4.2 Equation of continuity, equation of state, tensor presentation — 18
 - 1.4.3 Conservation laws — 19
 - 1.4.4 Geopotential altitude and Coriolis force — 21
- 1.5 Types of atmospheric waves — 22

2 Basic Concepts and Processing Methods — 28

- 2.1 Wave equation in homogeneous atmosphere — 28
 - 2.1.1 Derivation of the wave equation — 28
 - 2.1.2 Velocity potential (acoustic potential) and wave equation including quantities of second order — 29
 - 2.1.3 Helmholtz equation — 30
- 2.2 Energy relations in acoustic waves — 31
 - 2.2.1 Energy and energy flow density in acoustic waves — 31
 - 2.2.2 Momentum in acoustic waves and time-averaged values of acoustic pressure — 33
 - 2.2.3 Lagrange density in acoustic waves — 35
- 2.3 Wave equation in inhomogeneous atmosphere — 37
 - 2.3.1 Wave equation and solution-defining conditions — 37
 - 2.3.2 Review of the existing solutions — 39
- 2.4 WKB approximation — 42
 - 2.4.1 General remarks — 42
 - 2.4.2 Airy functions — 43

2.4.3	The wave field in the presence of a turning point —	45
2.5	Normal mode solutions —	47
2.5.1	Image of virtual sources —	48
2.5.2	Integral representation of the field —	49
2.5.3	Normal modes —	51
2.5.4	Cases of arbitrary boundaries —	53
2.6	Basic concepts of geometrical (ray) acoustics —	54
2.6.1	Wave fronts, rays and eikonal —	54
2.6.2	Ray-tracing equations —	56
2.6.3	Fermat's principle —	57
3	Sound Propagation in Atmosphere – Refraction and Reflection —	60
3.1	Sound propagation in quiescent homogeneous media —	61
3.1.1	Parametric description of wave fronts —	61
3.1.2	Variation of principal radii of curvature along a ray —	62
3.1.3	Caustic surface —	63
3.2	Sound refraction in stratified in homogeneous media —	64
3.2.1	Refraction caused by sound-speed gradients —	64
3.2.2	Refraction caused by windspeed gradients —	66
3.3	Acoustic rays in the atmosphere —	68
3.3.1	Ray integrals —	68
3.3.2	Rays in waveguides —	69
3.3.3	“Abnormal” propagation —	70
3.4	Amplitude variations in quiescent media —	73
3.4.1	Wave amplitude in quiescent and homogeneous media —	73
3.4.2	Energy conservation along rays: extension to slowly-varying media —	76
3.5	Amplitude variations in moving media —	77
3.5.1	Wave equation in moving media —	77
3.5.2	Conservation of wave action quantities —	78
3.6	Sound wave reflection from the interface between two media —	81
3.6.1	Reflection of plane waves from rigid boundaries —	82
3.6.2	Reflection of plane waves at planes with finite specific acoustic impedances —	83
3.6.3	Locally-reacting surfaces —	84
3.6.4	Sound field above reflecting surfaces —	85
3.7	Effects of ground surfaces —	86
3.7.1	Expressions of sound fields above porous half-space media —	87
3.7.2	Ground wave and surface wave —	88
3.7.3	Four-parameter semi-empirical expression for calculating ground impedances —	89

3.7.4	Excess attenuation due to the ground surfaces —	92
3.7.5	Effects of topography —	92
4	Sound Scattering and Diffraction in Atmosphere —	97
4.1	Basic concepts of scattering —	98
4.1.1	Scattering of fixed rigid object —	98
4.1.2	Scattering cross section —	100
4.2	Scattering due to non-homogeneity —	101
4.2.1	Differential equation for scattering —	101
4.2.2	Integral equation for scattering —	102
4.2.3	Asymptotic expression for scattered waves —	102
4.2.4	Born approximation —	103
4.3	Interactions between atmospheric turbulences and acoustic waves —	105
4.3.1	Separating acoustic waves from turbulence —	105
4.3.2	Wave equation in turbulent atmosphere —	106
4.3.3	Interaction mechanisms between turbulence and acoustic waves —	110
4.4	Sound scattering in turbulent atmosphere —	115
4.4.1	Scattering cross section —	115
4.4.2	Power ratio —	116
4.4.3	Power spectra —	118
4.5	Sound diffraction in quiescent atmosphere —	120
4.5.1	Point source above a locally-reacting surface —	121
4.5.2	Sound field expressions in the shadow zone —	123
4.5.3	Series expansion of diffraction formula —	124
4.5.4	Creeping wave —	126
4.5.5	Geometric-acoustical interpretation of creeping waves —	128
4.6	Sound diffraction in moving atmosphere —	130
4.6.1	Fundamental equations and formal solutions —	130
4.6.2	Normal mode expansions —	132
4.6.3	Asymptotic expressions for the eigen-values —	133
4.6.4	Asymptotic expressions of the eigen-functions —	135
4.6.5	Approximated expressions for the diffraction field —	138
4.6.6	Analyses and conclusions —	141
5	Sound Absorption in Atmosphere —	145
5.1	Classical absorption —	146
5.1.1	Equation of motion for viscous fluid – Navier-Stokes equation —	146
5.1.2	Equation of heat-conduction —	148
5.1.3	Energy relationships of acoustic waves in viscous and heat-conducting fluids —	149

5.1.4	Sound absorption coefficient in viscous and heat-conducting fluids —	151
5.1.5	Practical classical sound absorption coefficient —	152
5.1.6	Wave modes in viscous and heat-conducting media —	153
5.2	Molecular rotational relaxation absorption —	157
5.2.1	Absorption mechanism for modes of the internal degrees of freedom —	157
5.2.2	Rotational relaxation contributions —	158
5.2.3	Collision reaction rate —	159
5.2.4	Absorption coefficient due to rotational relaxation —	160
5.3	Molecular vibrational relaxation absorption —	161
5.3.1	The exchange rate in mole numbers for vibration excited molecules —	161
5.3.2	Dynamic adiabatic compression modulus —	164
5.3.3	Vibration relaxation sound absorption coefficient —	165
5.3.4	Vibration relaxation frequencies for oxygen and nitrogen —	167
5.3.5	Mole fraction (molecular concentration) of water vapor —	168
5.4	Total absorption coefficient and additional absorption —	170
5.4.1	Total absorption coefficient —	170
5.4.2	Additional sound absorption —	171
5.5	Sound absorption in fog and suspended particles —	173
5.5.1	Historical review —	173
5.5.2	Basic analyses: mass transfer process —	175
5.5.3	Further analyses —	177
6	Effects from Gravity Field and Earth's Rotation —	181
6.1	Wave system in quiescent atmosphere —	182
6.1.1	Fundamental equations and frequency dispersion equation —	182
6.1.2	Internal waves —	184
6.1.3	Phase velocity and group velocity —	186
6.2	Waves in moving inhomogeneous atmosphere —	188
6.2.1	Fundamental equations and the processing procedures —	188
6.2.2	Transition to isothermal atmosphere, slowly-varying atmosphere —	190
6.2.3	Velocity divergence equation —	192
6.2.4	Energy density and Lagrange density —	193
6.3	Polarization relations —	195
6.3.1	Phase relations between perturbed quantities —	195
6.3.2	Air-parcel orbits —	198
6.3.3	Complex polarization terms —	199

6.4	Rossby waves —	200
6.4.1	Geostrophic wind —	200
6.4.2	Formation of Rossby wave —	201
6.4.3	Properties of Rossby wave —	203
6.5	External waves —	205
6.5.1	Characteristic surface waves —	205
6.5.2	Comparison with internal waves —	208
6.5.3	Boundary waves —	210
6.6	Atmospheric tides —	212
6.6.1	Outlines —	212
6.6.2	Theory —	214
7	Computational Atmospheric Acoustics —	220
7.1	Fast field program (FFP) —	221
7.1.1	Helmholtz equation, axial symmetric approximation —	222
7.1.2	Solutions of the Helmholtz equation —	226
7.1.3	Field at the receiver —	228
7.1.4	Improvements to the accuracy of numerical evaluations —	231
7.1.5	FFP solutions in homogeneous atmosphere in two dimensions —	231
7.2	Parabolic equation (PE) method I: Crank-Nicholson parabolic equation (CNPE) method —	233
7.2.1	Derivation of narrow-angle PE and wide-angle PE —	235
7.2.2	Finite-difference solutions of narrow-angle PE and wide-angle PE —	237
7.2.3	Effects of density profile —	240
7.2.4	Finite-element solutions —	241
7.3	Parabolic equation (PE) method II: Green function parabolic equation (GFPE) method —	242
7.3.1	Unbounded non-refracting atmosphere —	242
7.3.2	Refracting atmosphere —	246
7.3.3	Three-dimensional GFPE method —	247
7.4	Ray tracing —	251
7.4.1	Ray equations —	251
7.4.2	Concrete example for numerical integration – ray tracing for the infrasonic waves generated by typhoon —	255
7.4A	Ray theory for an absorbing atmosphere —	257
7.4A.1	The generalized dispersion equation —	258
7.4A.2	The generalized Hamilton equation —	261
7.4A.3	The generalized ray equations and fermat's principle —	263
7.5	Gaussian beam (GB) approach —	266

8 Acoustic Remote Sensing for the Atmosphere — 271

Part One Acoustic remote sensing for the lower atmosphere (troposphere) — 272

- 8I.1 Probing system — 272
 - 8I.1.1 Monostatic configuration — 272
 - 8I.1.2 Bistatic configuration, Doppler echosonde — 275
- 8I.2 The physical foundations of acoustic sounding — 277
 - 8I.2.1 The principle of pulse-echo sounding the atmospheric non-homogeneities — 277
 - 8I.2.2 Scattering volumes delimited by electro-acoustic transducers — 279
 - 8I.2.3 Acoustic radar equation — 281
 - 8I.2.4 Incoherent scattering: bistatic acoustic sounding equation — 282
 - 8I.2.5 Echosonde equation — 283
- 8I.3 Outputs of the acoustic sounder — 285
 - 8I.3.1 Thermal plume detection — 285
 - 8I.3.2 Monitoring of Inversions — 286
 - 8I.3.3 Stable conditions and waves — 287
 - 8I.3.4 Quantitative comparisons — 288
- 8I.4 Systematical algorithm for acquiring wind profiles from SODAR — 290
 - 8I.4.1 Doppler frequency spectrum acquired from SODAR — 290
 - 8I.4.2 Spatial resolution of Doppler frequency spectrum — 292
 - 8I.4.3 Modeling of wind velocity profile — 292
 - 8I.4.4 Weight-function and covariance — 294
 - 8I.4.5 Application examples — 295
- 8I.5 Passive remote sensing — 296

Part Two Acoustic remote sensing for the upper atmosphere — 297

- 8II.1 Physical foundations of acoustic remote sensing for upper atmosphere — 298
 - 8II.1.1 Refraction — 298
 - 8II.1.2 Absorption — 299
 - 8II.1.3 Inferring upper atmospheric properties from acoustic measurements — 300
- 8II.2 Detecting systems for remote sensing — 300
- 8II.3 Recognition of waves in the atmosphere — 303
- 8II.4 Passive remote sensing of infrasonic waves existing objectively in atmosphere — 305
 - 8II.4.1 Global infrasonic monitoring network — 306
 - 8II.4.2 Some prospects — 308

9	Non-linear Atmospheric Acoustics — 309
9.1	Non-linear effects in sound propagation — 309
9.1.1	Plane waves in homogeneous media — 309
9.1.2	Synopsis of shock waves — 312
9.1.3	Generation of harmonic waves — 313
9.1.4	Nonlinear dissipative waves, Burger's equation — 316
9.1.5	Nonlinear waves propagating in inhomogeneous media — 318
9.2	Sonic boom — 319
9.2.1	Fundamental theory of sonic boom — 320
9.2.2	Focus of sonic boom — 324
9.2.3	Thickness of shock wave — 325
9.2.4	Simulating programs of sonic boom — 325
9.3	Recent researches for sound waves in atmospheric turbulence — 326
9.3.1	Influences from intermittence — 327
9.3.2	Influences from anisotropy in small-sized turbulence — 328
9.3.3	Influence from quasi-periodic coherent structure of atmosphere boundary layer (ABL) on low-frequency power spectra of back-wave signals — 330
9.3.4	Influences from coherent structure on the propagation of pulses in ABL — 330
9.3.5	Sound scattering from anisotropy structure in mid-atmosphere — 331
9.3.6	Influences from turbulence on non-linear waves — 332
9.4	Atmospheric solitary waves — 334
9.4.1	Fundamental equations for atmospheric solitary waves — 334
9.4.2	Detection of atmospheric solitary waves — 338
10	Sound Sources in Atmosphere — 341
10.1	Fundamental sound sources — 341
10.1.1	Monopole sources — 341
10.1.2	Dipole source — 342
10.1.3	Quadrupole sources — 344
10.1.4	Piston sources — 344
10.1.5	Fluid sources — 345
10.2	Natural sound sources — 346
10.2.1	Ocean waves — 346
10.2.2	Heavy objects falling down into water — 352
10.2.3	Violent firing — 354
10.2.4	Strong wind — 357
10.2.5	Earthquake — 359
10.2.6	Volcano eruption and meteorite fall — 360
10.2.7	Aurora — 360
10.2.8	Others — 362

10.3	Artificial sound sources —	362
10.3.1	Airplanes —	362
10.3.2	Rockets —	362
10.3.3	Explosions in upper atmosphere —	363
10.3.4	Nuclear tests in atmosphere —	363
10.3.5	Explosion of U.S. space shuttle “Challenger” —	364

References —	365
