

Contents

Part I: Female Reproduction

New Insights into Ovarian Function	3
JoAnne S. Richards and Stephanie A. Pangas	
Estrogen Signaling in the Regulation of Female Reproductive Functions	29
J.K. Findlay, S.H. Liew, E.R. Simpson, and K.S. Korachh	
Progesterone Receptors and Ovulation	37
Orla M. Conneely	
Contraception Targets in Mammalian Ovarian Development	45
Eileen A. McLaughlin and Alexander P. Sobinoff	
Proteomics of Embryonic Implantation	67
T. Garrido-Gómez, F. Dominguez, and C. Simón	
Evaluation of Plasma Membrane Calcium/Calmodulin-Dependent ATPase Isoform 4 as a Potential Target for Fertility Control	79
Elizabeth J. Cartwright and Ludwig Neyses	

Part II: Male Reproduction

New Insights into Sperm Physiology and Pathology	99
R. John Aitken, Mark A. Baker, Geoffry N. De Iuliis, and Brett Nixon	
The Epididymis as a Target for Male Contraceptive Development	117
B.T. Hinton and T.G. Cooper	

**Sperm–Zona Pellucida Interaction: Molecular Mechanisms
and the Potential for Contraceptive Intervention** 139
Matthew D. Dun, Lisa A. Mitchell, R. John Aitken, and Brett Nixon

**Mouse Models as Tools in Fertility Research and Male-Based
Contraceptive Development** 179
Duangporn Jamsai and Moira K. O’Bryan

Part III: New options: From target to product

Male Hormonal Contraception 197
E. Nieschlag

Family Planning: Today and in the Future 225
Michael J.K. Harper
